The justification was smokey reports and the FCC said 'Droppen Sie Dead'. Ohio earns its rep as the nation's most chicken hiway patrol on a regular basis. Wagner Brake in St. Louis once applied to run all kinds of footwarmers etc because their anti-lock brakes were very rf prone at the time and truckers with amps made them do everything short of the half-fast waltz. You might be surprised at the requests Fat Cousin Charlie gets.

Thank you VERY much. That was an EXTREMELY helpful reply. It's nice to be able to encounter somebody who has actually done serious RF work. I come across more than enough chop-shop, screwdriver turning, "tweak and peak" techs in my activities.

I'm with you so far on the equipment needed, and I've been researching this alot. Except I have two questions - What is a demod probe, and what is a grid-dip oscillator?

And on the RF signal generator, you mentioned accuracy. That's a desirable quality =) How could I verify accuracy? Checking the frequency and voltage is easy, but what if I need to KNOW that a a signal is modulated at say, 30%?

Almost done: Any recommendations on accurately measureing transmitter RMS power and PEP? I know that there are alot of wattmeters available, but somehow I can't help but believe that a $30 truck-stop unit is subpar - I could be wrong. I've heard that the old Bird Thruline wattmeters are great. A similar question: Can modulation percentage accurately be measured by a meter? I've always seen examples of over and under modulation in textbooks represented on a scope. I somehow assumed that a scope was the only accurate way to measure modulation. If I was wrong, and a meter can do it, wonderful. I'm also curious as to how accurate the readily available and cheap meters of this type are.

You have been a fantastic help! Thank you.

>is a grid-dip oscillator?

A 'demod', or 'demodulation' probe is basically a probe with a diode
and cap built into the probe. It will give you peak RF voltage, and
will swing with any modulation. You can even hook it up to an amp and
hear the audio.

A grid-dip oscillator (or gate-dip oscillator, depending on how it's
built) is just a high-impedance variable-frequency oscillator with a
meter that will 'dip' whenever the coil is held near a circuit that is
resonant at the same frequency of the oscillator. It's useful for
tuning antennas and tanks, as a signal injector, and a whole lot of
other stuff. A GDO is something you really need to learn to use from
someone else and not just from a book.

>And on the RF signal generator, you mentioned accuracy. That's a
>desirable quality =) How could I verify accuracy? Checking the frequency
>and voltage is easy, but what if I need to KNOW that a a signal is
>modulated at say, 30%?

You can check freq with the freq counter and measure the output with
your demod probe. Stability is most important because you don't want
to retune it every five minutes. Most sig-gens (even the cheap ones)
will have an internal modulator (AM) of 400 and/or 1000 Hz, plus an
external modulation input so you can hook up an audio sig-gen. A
better sig-gen will have a modulation and output level meter, plus AM
and FM modes.

BTW, use 400 Hz whenever possible, because 1000 Hz on a regular basis
will leave your ears ringing for months. That, and if the volume is
high when your signal kicks in it will hurt!

>Almost done: Any recommendations on accurately measureing transmitter RMS
>power and PEP? I know that there are alot of wattmeters available, but
>somehow I can't help but believe that a $30 truck-stop unit is subpar - I
>could be wrong. I've heard that the old Bird Thruline wattmeters are
>great.

Hype. If you want to spend the money, get a Bird. If you want to get
close enough for government work then just get something that works.
You can always verify by measuring your RF voltage, and if you are
hooked up to a 50 ohm dummy load with 1:1 SWR (as most dummy loads
will show) then you know your current, and therefore your power.

And don't get hung up on power, it's not as important as many people
seem to think. What is going to be important is the audio frequency
response. If your IF cans are too sharply tuned you will get a very
poor audio response, and it will sound either very muddy or very
bright. You also need to make sure the audio doesn't exceed the 3 kHz
limit or it will start bleeding on other channels. A nice, flat audio
response with a good mic is much better than tweaking the radio for a
couple extra watts, simply because the audio is much more intelligible
than voice run through a 500 kHz 6th-order bandpass filter.

Just to demonstrate, if you have an equalizer on your stereo, tune to
an AM talk station and drop all sliders above 3 KHz and level the
rest. Sounds ok. Now spike the response for any freq below 3 KHz.
Sounds like crap. That's what's important. You can check audio
response with an audio sig-gen: change the frequencies while keeping
the output level the same, then measure modulation percentage on the
output. If the response is flat, the modulation level should stay
relatively steady.

> A similar question: Can modulation percentage accurately be
>measured by a meter? I've always seen examples of over and under
>modulation in textbooks represented on a scope. I somehow assumed that a
>scope was the only accurate way to measure modulation. If I was wrong,
>and a meter can do it, wonderful. I'm also curious as to how accurate the

>readily available and cheap meters of this type are.

Accurate enough as long as your modulation input level can be held steady (another use for an audio sig-gen). But I would suggest you spend a few extra bucks and get a power/modulation meter with a peak-and-hold function. Be warned that this is not the same as a 'peak-reading' meter -- a 'peak-and-hold' meter will keep the needle at the highest point until it's reset.

I highly suggest that you take Dick's advice and pick up a couple old radio/TV repair books from the 50's or 60's. The newer books just don't seem to have much info on test setups, or they are way too simplistic to be useful. Coyne made a set of very good books and I highly recommend them if you can find them.

Did you even try to knock on the door and explain the interference in a polite manner? Or are you one of people that wanted to be a cop but couldnt hack it. So you decide that stalking them would be better than intelligently informing them of the problem. If you are to chicken shit to knock on the door than maybe a nice polite letter. You obviously know the address.

I hope you get your woody out of all of this.

> What kinds of features should I look for when purchasing an oscilloscope
> suitable for CB repair and (someday) transceiver alignment?

I read the other posts in this thread about scope recommendations. First I would say that once you get started that you will find that you will be using your equipment for more that just servicing CB radios. I would say get the best scope you can afford. What the others have not made much mention of is that a scope can make many of the measurements that a dedicated instrument can do, and about as well too.

For example a scope connected across a known 50 ohm load, and measuring the voltage one can simply compute the RMS power output, thus saving the cost of a wattmeter. A simple two tone generator circuit connected to the input of a SSB rig, with the above setup, you can calculate PEP power as well.

For another example some of the newer digital scopes have a built-in FFT function. This lets you use the scope as a substitute for an expensive spectrum analyzer.

Also simple dedicated meter type instruments can't show you when the biasing is set correctly for a power stage to eliminate cross over distortion in a class "B" push-pull audio circuit, or when the output RF stage in a SSB rig is operating class "C" due to a malfunctioning bias circuit.

You will also need a scope to catch intermittent instabilities in the PLL reference oscillator, logic glitches in frequency divider chains etc.

While a good dedicated meter type instrument maybe more handy to use, but if you don't have it on hand then it maybe possable to use a scope to do the job with a little bit of thinking.

In all of the electronic flea markets I have gone too, the first things that seem to sell are the good quality high frequency scopes, if they are priced reasonably. I have seen a lot of the 50 MHz to 100 MHz analog only scopes sell quick for around $400 to $600.

A good scope for the money right now seems to be the Tektronix model TDS-1012. This is a fully digital storage scope, duel trace, with built-in measurement functions like RMS, Pk to Pk, FFT etc. All for $1295 for the 100MHz scope, and $995 for the 60 MHz model TDS-1002.

Hey Zeek,
I am responding to a individual who used a remailing service to send me
a very disturbing and profane e-mail.
I can not repost what the contents of the letter contained but i can tell
you
it was very rude and un-called for.
It is a response resulting from my post urging people to stop replying to
Aaron Voobner.
The xganon remailing service was created for crime victims and others who
have a legally valid reason to remain anonymous, however the said individual
has chosen this service to harass people.
The mistake he made was invading my e-mail with his filth.
Alas both he and the remailing service will soon face legal ramifications
of great proportion and i will show no mercy.
What floors me is this person claims to be a anti-keyclown, isn't he the pot
calling the kettle black.

But there IS a law about driving them at that speed, isn't there? And
you never did tell us whether you speed. TROLL.

> >Asswipe, it's operating them above the speed limit (freq
> > for radios) that causes the violations.
>
> No, selling them is against the law. See above. Would you like me to

If it doesn't hurt anyone (like speeding can) then who cares? RADIO HAS NEVER KILLED ANYONE. Bad driving does. Since you are NOT a licensed amateur, what difference does it make to YOU? TROLL.

How far above? The CB band ends at 27.405.

And ALL CB operators are "unlicensed". Your point?

Which make another point for me. The FCC "claims" that they cannot
permot unlicensed operations below 30 MHz "because of ITU
regulations". But CB is NOT licensed, it is below 30 MHz, and there is
no such thing as a "blanket license". Hmmmmm! Who's in violation of
what??

Actually, "unlicensed operation" above 27.405 is not CB. Between there
and 28.0 MHz is "freeband".

This is a nice big plate transformer 14" tall x 11 3/4" wide x 7 1/2"
deep
120/220 primaries 3000v @ 3 amps
this baby is pretty heavy i'd say about 100 lbs or close to it.
I don't really think it would be cost effective to ship. But if you
want i can check. I heard they are still shipping thru the bus lines
which if you live close to a bus station it would be pretty cheap probably.
Asking 400.00
Make me an offer, Looking for some Vaccum Variables 1000-1200 at least 5kv

I have several oil caps for sale all in great shape. Have the mounting
holders for some of them.
Need to sell or trade for some Screw on types.
here is a list of the ones i have.
1-25mf @3000vdc
1-35mf @ 2500 vdc
1-10mf@1500vdc
1- 2mf@5000vdc
4-1mf@2000vdc
2-1mf@3600vdc
2-1mf@600vdc
what i need is 16 of the screw on types min req. 300mf @ 450vdc
anybody that can help it would be greatly appreciated.

That was the point, but Kevin stated that it was against
State & Federal law to inform others of a speed trap. Then
George came in with a paint brush so wide, you could paint
an entire road with one swipe (obstruction of justice).

I asked for the state & federal statute, to where it was illegal to inform others via a cb was illegal, all the come back with interfering with an officer. Which the same could be said by just waving at people when you drive by, LMAO!!!!

The trucking company is toast.
The states got tired of these companies hiring any warm body and saying " we didn't know when someone gets killed" Finally The states start putting the owners in jail where they belong.
Oh and if you kill someone when talking on a cb or mobile ham rig guess what?
You may not go to jail but you deserve the poltergiest haunting your butt.

Wrong. See below. This time, READ it.

>TROLL.

Posting accurate info is a "troll"? Since when?

Here's the straight dope from the FCC:

In a May 13 Public Notice, the FCC points out that it's a violation of FCC regulations to import or market a transmitter designed or intended to operate outside the amateur bands unless the equipment has been issued a grant of equipment authorization for the radio services it's capable of operating. The FCC says it wanted to clarify its rules on equipment that's "intended to operate in various radio services in the high frequency radio spectrum, including '10-meter' Amateur Radio Service (ARS) equipment."

Well, well. Claims 550 rms real water-boiling watts and 1500 peak which means if I pump in a 100% modulated Antique Modulation signal it will return 15/22 or 65% on a good day. My, my.

Improvement on the 400 watt model that would cut it to 50%; my, my.

Another wonder of CB Science?

From: gcarojr@hotmail.com
Message-ID: <fd1931a1.0207301749.4a4688a5@posting.google.com>
Source record: 131765

The TUP9-D104NKE Night K Eagle is a version of the original D104 microphone. This microphone features a unique End of Transmission Signal (ETS) with two different and distinctive sounds. The first is a Morse code "K" which is the universal telegraph abbreviation for "over". The second switch selectable sound is a multi-tone burst. The TUP9 stand has a built-in two stage silicon transistor amplifier having high impedance input. The output impedance is suitable for the inputs of all commercial transmitters or transceivers. The TUP9 features grip-to-talk and press-to-talk bars. See the link below. Thank you.

Hi Yeti

I just have one question I am thinking on running dual antenna's ....how do I check the antenna's for swr reading if both are connected at the same time ..??? Say for example my swr reading are very high ...how do I know which anntenna needs to be adjusted to bring the swr reading up or down..?? If the swr reading is high do I just cut off alittle bit offf each antenna....?? makeing sure each antenna is the exact same length....??
\

Yes, but the fact remains it resulted from my efforts to delete you from the NG.
You have nothing to add here but but your legal/illegal mumbo-jumbo, i am sure you spend every waking moment researching rules and regulations that
the average CB'r really does'nt give a crap about.
I feel that your only purpose here is to confuse the issue and distract people from
gaining the knowledge that they so desire.
If you're not with us you are against us.
It is not illegal to have great knowledge and wisdom, how that wisdom is used
is left to the discretion of the operator.
There are bad apples in every crowd and we have our share in the trucking industry. I operate a modest system that satisfies my needs w/o the use of a external RF amplifier because i have no need to talk to people i can't hear .
A custom DSP gives me the extra punch to break thru the pile-ups.
Almost every newbie thinks he needs a amp until he learns a little about RF propagation and gains enough patience to wait until the freq. is clear before
they lay the key down.
Your time would be better spent convincing people to study for their no-code at which point they would catch the HAM bug and begin to have respect for the priviledge of using the airwaves for communication.
I find people have no respect for things they did'nt earn (CB) but that changes with amateur recognition.
I feel you have a little growing up to do judging from the last sentence but thanx for the reply.
Goodbye.....

Huh?...................

Your original post said two antennas.

This should mean that you are co-phasing the two with a proper
harness and you'll end up with one swr reading. Not two.

Obviously you are not doing the above. Instead you just own two
antennas.

I own about a dozen. My Swr's vary also...........

Once he has the information to forward to the FCC it is not his job to play cop. If all he wants is the interference to stop and he wants to do it legally then he did the right thing by not contacting the offender himself. Not a bright idea to knock on someone's door and say:

"I'm sorry but your causing interference blah blah blah."

These days your likely to catch a real good ass whipping if your lucky. If your unlucky they'll shoot you. If your really lucky you'll have a decent conversation with them and just maybe they'll do something about it.

Dave

Which is why the cb band is the sewer pit of radio communications.

>dedicated instrument can do, and about as well too.

Well, it won't read frequencies very accurately, that is unless it has a built-in frequency counter. And voltage measurements are not too accurate in comparison with modern digital voltmeters, mainly because you are looking at a trace on CRT superimposed on a grid instead of a number with 4 or 5 digit accuracy. A scope also requires constant alignment to maintain the accuracy it has. For rough and general measurements that's fine, but for the accuracy that's needed with some of these modern radios it's just not enough.

>For example a scope connected across a known 50 ohm load, and measuring =
>the voltage one can simply compute the RMS power output, thus saving the =
>cost of a wattmeter. A simple two tone generator circuit connected to =
>the input of a SSB rig, with the above setup, you can calculate PEP =
>power as well.=20

As I stated before, you don't need a scope to read RF voltages.

>For another example some of the newer digital scopes have a built-in FFT =
>function. This lets you use the scope as a substitute for an expensive =
>spectrum analyzer.

I may be mistaken because I'm not up-to-date on state-of-the-art, but aren't those FFT functions only for low frequencies? You can do that with your computer and a sound card.

>Also simple dedicated meter type instruments can't show you when the =
>biasing is set correctly for a power stage to eliminate cross over =
>distortion in a class "B" push-pull audio circuit,

Of course you can. Depending on the circuit, all you need to do is measure the quiescent collector (or grid) current. And with an audio distortion analyzer you can check for crossover distortion plus any other distortion and/or nonlinearity, and with MUCH more accuracy than looking at a trace on a scope. For example, if your distortion level suddenly jumps as you reduce the bias, then the bias is too low. Or if it jumps while you increase the input then you are clipping. It will also tell you something that you can't see on a scope, and that's the optimum bias for lowest distortion.

> or when the output RF =
>stage in a SSB rig is operating class "C" due to a malfunctioning bias =
>circuit.=20

That's -too- easy: Just reduce the modulation gradually, and if the power drops off before your modulation hits zero then you are operating class C. Or if RF power doesn't drop to zero when modulation input is zero, then you have some residual carrier, probably from a fault in the balanced mixer.

>You will also need a scope to catch intermittent instabilities in the =
>PLL reference oscillator, logic glitches in frequency divider chains =
>etc.=20

True, and that is what I was talking about before. But you don't need a super-charged, multi-trace, digital scope to see it, just a good trigger.

>While a good dedicated meter type instrument maybe more handy to use, =
>but if you don't have it on hand then it maybe possable to use a scope =
>to do the job with a little bit of thinking.

A scope is probably the most versatile instrument in the shop, but like I said before, the accuracy isn't quite what you can get from dedicated instruments. The cost of dedicated test equipment has dropped over the years while the accuracy has increased by magnitudes. You can have two or three of just about every other instrument in the shop and it still won't cost as much as one of those top-of-the-line O-scopes, the best of which are just beginning to approach an accuracy that is usable for modern electronics.

>http://www.tek.com/Measurement/cgi-bin/framed.pl?Document=3D/Measurement/=
>scopes/home.html&FrameSet=3Doscilloscopes

For a person just starting out I wouldn't recommend anything over a couple hundred bucks for a scope, maybe even less. If he learns how to use a scope without all the bells and whistles he will have a much better understanding of how it works and how it can be used. Later, if he decides to continue with electronics, he will have a better idea of just how many buttons and knobs he wants to play with and get the best scope for his application.

It's obvious that we have different opinions about this. I'm sure he will get many other opinions.

True, but the symptom is the same. Who needs a license? Granted, there may be a difference, but as I mentioned in a post, it is similar to tapping into a telephone line. That telephone is likely to be unused 23 3/4 hours out of 24. So does that make it ok to tap into that telephone and use it? No one gets hurt, right? Seriously, no one gets hurt. Of course, if you are the guy paying for that telephone line and 20 other people start using it, you just might start getting a wee bit upset. Now I'd like to see you argue that line of thinking. It is quite similar to what I am seeing in the newsgroups. Think about it (if you are capable of rational thought, that is).

You whine on the newsgroup about an email that you won't post, then
imply without proof that the guilty party was Voobner, then whine some
more when he defends against your 'implication' for an offence that
you haven't shown actually happened.

If you are going to take legal action against the person responsible,
fine. But any lawyer in the world will tell you not to incite further
abuse or harassment or you jeopordize your standing. If you are
looking to the newsgroup for sympathy, you might even get some from
unexpected sources if you prove that you actually received such an
email. Hell, just post the headers if nothing else. Or email me a
copy. Otherwise, and as far I'm concerned, your are just posting some
BS story to stir up trouble.

Look on ebay in the test and measurement section. There are other test and measurement houses to find by doing a google search. I recently aquired a Tektronix 2465 300 MHz four trace oscilliscope for $600 on ebay last month.Other Tektronix scopes to look for are the 465 and 475a series. Stay away from most of the "sold as is I don't know how to test it" stuff. Usually you'll just wind up buying someone elses problem child. If you are just going to use it for CB and or HF work get something with at least 100 MHz of bandwidth

As far as communication analyzers are concerned don't expect to find a decent one for less than $2000 dollars. Some good com analyzers to look for are the Tek 492 series, HP 8590 series spectrum analyzers and Motorola 20xx series communication analyzers..

Introducing the updated Galaxy-Ranger service manual. The new SECOND EDITION covers the EPT3600, EPT0696, and EPT6900 chassis types. That includes MANY brands such as Galaxy, Ranger/RCI, Superstar, Texas Ranger, Connex, etc. Complete details on this specific book are on our Web site at:

www.cbcintl.com/galaxy.htm

Check out all our CB specialty books, plans, kits, & high-performance accessories at:

www.cbcintl.com

* *
In case you didn't already know...

Who are we? Since 1976 we've been the leading supplier of books, plans, and kits just for CB radio. Do-it-yourself repairs and modifications, 10-Meter Ham conversions, amplifiers, FM converters, bleedover filters, adding new frequencies, etc. Secrets of how to increase your power, range, and privacy.

If you have any problems getting the files, or need additional details on what we offer, please email us directly at:

Um, I am curious what exactly you feel would be the nature of a
complaint that would get me "yanked"? Maybe something liker this?....

"Dear Google. Whenever anyone advertises an illegal CB amp in
violation of FCC rule 2.815 Voobner says that it is illegal. We think
this is harassment and we want you to terminate his account"

LOL! Or how about...

"Dear Google. Whenever we use profanity and threats to Voobner he
posts something nasty in response. We want you to terminate his
account for this"

ROTFLMAO! Or maybe...

"Dear Google. Voobner disagreed with me in a NG and when I insulted him and told him to shut up he said something unkind to me. I insist you yank his account for this behavior"

HAHAHAHA! Or perhaps....

"Dear Google. It's OK if someone else advertises in the NG but we don't want Voobner doing it. Please yank his account for this"

OMG, can't you see how RIDICULOUS it is to suggest you could get me "popped" for posting FCC information? Or opinions that disagree with yours? Or a FOR SALE ad that is ON TOPIC for this newsgroup?

In one post, you espouse "free speech"...and in another you're trying to unilaterally deny mine because you don't like my opinions.

>Landshark
>
>"BAD CITIZENS HAVE MORE FUN BECAUSE THEY ARE MORE FREE"

Landshark, your degree of hypocrisy is nothing short of.....ASTOUNDING.

Alan--
The following is from my book, "Understanding & Repairing CB Radios."
May help with your 'scope decision. BTW a 30MHz 'scope is all you'll
ever need for CB work, unless you're planning to work on VHF gear.
Save yourself some money.

If you find a good 'scope just make sure it has its BOOK included!
Also there are a couple books on how to use scopes & other test equip.
offered from SAMS, TAB Books, etc. Check the Web...

Book details are at: www.cbcintl.com/urbook.htm

Good luck,
Lou
****

OSCILLOSCOPE: No CB bench would be complete
without this extremely useful and versatile instrument. This is your
biggest investment, so consider the choice carefully. An audio type
service 'scope just won't do the job; you need one that's capable of
viewing the 27 MHz signal directly, and with accurate p-p
measurements. In this price range the 'scopes generally come with
dual-trace capability, triggered sweep, delayed sweep, and other
useful features too.

You can't conveniently adjust AM modulation to the required levels
unless you can view the actual waveform. It's possible to connect a
simple audio type 'scope to use the trapezoidal measurement method,
and we'll demonstrate this later. However you still need a high
frequency response for things like transmitter signal tracing. When I
was starting out and couldn't afford a 'scope, I did a lot of signal
tracing with a VOM and RF probe. This method works, but without a
'scope you can't analyze the more subtle problems like noise and
distortion. A good 'scope is actually cheaper today than when I was
starting, due to Far East competition and improved production methods.
You don't need a Tektronix, even though everybody wants one; excellent
instruments are now made by B&K, Hitachi, Kikusui, Hickok, Leader, and
others.

It doesn't matter, the proof is why you have had so
many different screen nics, obviously you had those accounts
canceled, so try to overt attention away from yourself again.

This one is in Sams CB Fotofacts #212. (54CB, Key/Com 1000)

Mike Wiring (relay-switched)
1 = Ground
2 = Mike Audio
3 = TX
4 = n/c

The Ch. keypad is complicated and you need the whole schematic. That's
parts of the Sams. Try to order a photocopy from them at:
800-428-7267

Sounds like the old TRC480 (21-1563) This was the mobile version of
the TRC459, a big all-microproc. base model. Thus no Ch. switch. It
was black and used PB controls.

I seem to have every R/S CB manual ever made, EXCEPT that one. It is
covered in the Sams CB Fotofacts #278 but the picture is very small
and would not lend itself to scanning.

Of course you avoid answering, because there ISN'T any legitimate complaint you could use to get my account "yanked".

Your whining is ridiculous, Mark. You and your "bad citizens" can disagree, cry, scream, call me names, etc, and I don't try and get your accounts yanked. Why? Because its all free speech. (Only once did I have to terminate someone's account, and that was only because he was encouraging readers to "shoot me in the head".) But you overgrown babies think you can get someone's account cancelled for "spam" because you don't like what they post? Get real.

>
> Landshark

Because some idiots in here prefer to think that I'm Voobner, which I
am not. But if he thinks that, then I'm the next person to be accused.
And if I'm going to be accused of something he damn well better have
something to accuse me with, not just some bs story about an email.
Then he needs to prove his case, which of course he can't because even
if he did get an email like he claims it wasn't from me. So you might
call it a pre-emptive defense based on probable certainty.

Now I have to ask why you would ask that question? Have you jumped on
the keyclown propaganda bandwagon and think that I'm Voobner, too? Or
have you seperated yourself from the lemmings and decided that you can
think for yourself?

I have to disagree with a couple things here:

In <bftekucpver11e5rft2fhaj9ul03ktpk5j@4ax.com>, Lou Franklin
<lou@cbcintl.com> wrote:

<snip>
>You can't conveniently adjust AM modulation to the required levels
>unless you can view the actual waveform.

For starters, the 'modulation' adjustment is either an audio gain control or a limiter adjustment. If it's audio gain, you adjust it for specs with an audio (sine) signal generator and either a AC voltage measurement on the modulator output or on the modulation meter. If it's a limiter adjustment, crank the audio up until the modulation meter stops. If it stops above 100%, turn down the limiter. If it stops well below 100%, turn it up. This ain't rocket science...

> It's possible to connect a
>simple audio type 'scope to use the trapezoidal measurement method,
>and we'll demonstrate this later. However you still need a high
>frequency response for things like transmitter signal tracing.

A sig-gen works better because it can be used as a signal injector at each stage, and it's much easier to track down a problem by working backwards from the final. A scope doesn't always work because not all stages have voltage gain, and if you are not paying attention to the schematic you might end up wasting time and money replacing by good components without cause. I learned that one by experience...

> When I
>was starting out and couldn't afford a 'scope, I did a lot of signal
>tracing with a VOM and RF probe. This method works, but without a
>'scope you can't analyze the more subtle problems like noise and
>distortion.

We're talking AM here. Noise and distortion usually occurs in the audio stages, the modulating stage, or the final. If the source of the noise turns out to be from the RF input to the final, it's almost always because the PLL/VCO has gone haywire, and you can see that on a freq counter even before the scope has had a chance to warm up.

> things WORSE, don't you agree?
==

The more power you run, the greater the chance that it will break
through somewhere. But, power alone is not the cause and cure.
I have known people interfere with around 1/2 Watt of power. Reducing
their power from 4 Watts had not stopped it as they had expected.

The more lottery tickets you get, the greater the chance you will win :~)
But nothing is guaranteed.

==
> I believe that within your first few posts to me you resorted

I see that some have made guesses at what happened.

Actually, Twistedhed changed his e-mail some months back, due to the scumbags that keep sending hate mail to the users of this newsgroup. He gave the new addy out to all who he knew could be trusted to behave themselves. If you had not e-mailed him recently when he changed, then he may have missed you out.

Maybe that is why Frank doesn't have the details... maybe Twistedhed just forgot to include him. I guess that means he may not be on his Christmas list either.

I e-mailed Twistedhed a couple of weeks back, and no bounce message.

Regards,

Brainbuster.

==

The usual "A Friend" crud.

Try this one:
ACCEPTABLE USE POLICY
1. E-MAIL
(B) Users may not send email to any person who does not wish
to receive it.

ANON.XG.NU requests that anyone who believes that there is
a violation of this AUP direct the information to abuse@www.xganon.com

www.xganon.com may take any one or more of the following actions
in response to complaints:
block a users IP address
bill the user for administrative costs and/or reactivating charges
bring legal action to enjoin violations and/or to collect
damages, if any, caused by violations.

I have xganon addresses blocked for news and e-mail. Although they do state
an abuse policy, they are clearly just a route for junk and hate mail. The
only reasons to hide your identity in an e-mail are all against their "tos".
My filter deletes spam on the server, before I use OE to download the
remaining mail.
My delete log shows that two "xganon" posts were deleted, so they are
trying... but failing miserably.

Regards,

Peter.

==

Yeah, sure... I'll go along with that.
Aaron and I have just agreed on one or two points, so it has to be a good point to block him.

One thing I did find amusing was this quote from Aaron:

> > Reprinted from a Sparky post:
> >
> > anyone sitting on the fence is reading
> > both sides of any argument, and can tell
> > the difference between keyclown BS and the truth.

Now that is funny. From what I have seen and experienced in the last year, the "antis" make every attempt possible to shove people off the fence. Even those who are using legal equipment are harassed, insulted, called "keyclowns" and subjected to abuse sent direct to their e-mail addresses.

While the "antis" claim that legal CBers are subjected to abuse from "keyclowns", the truth is that the abuse comes from the "anti" side of the fence, even to those running legal setups. The content of the e-mails suggests that they are school age (at least in mind) and see the whole thing as nothing more than a joke.

What really happens is that those "on the fence" either land on the other side, just block the "antis" or get p**s*d off and leave the group.

Well, I'm going nowhere so, lets do it... bring just a bit more peace to the newsgroup.

Regards,

Peter.

==

Hi Aagent Aaron.

You really need to get out more, you spend so much time worrying about
illegal CB that you see every post on this group as being "illegal".
If you stop long enough to think, you will realise that I am NOT encouraging
anything. Maybe the reference to "leaning that way" was a Brit joke
that you just didn't get.
Think of balls of meat with herbs and spices... or the Brit slang for
cigarettes.

Get it?
Leaning that way... limp wrist?

Oh, never mind. Jokes are never quite as funny when you have to
have them explained to you. I expect Georgina got it without an
explanation.

==
> And to think, all you have to do is be honest and law abiding and
> things would be so much simpler.
==

There you go again... please provide proof that I am breaking ANY Brit.
CB laws. No, wait a minute... I remember your idea of proof, something
like a two word reply. Wasn't it "s*d off".
Good thing that the REAL law requires real proof.

As I said, you really need to get out more... you are seeing
things that are not there.

==
> -Aagent Aaron-
==

BTW: As mentioned in another thread, I have dropped you back in
the killfile. Unlike someone else on this group, when I say "plonk",
the person really is plonked... at that very time.
Consider it my bit towards peace in the newsgroup.

Plonk.

>
> PS: unlicensed "CB" operation above 28 mHz is illegal - in the UK
==

True.

==
there isn't a law against selling 120 mph cars.
==

True, rather unfair though. While the law forces CB manufacturers
to make products that are compatible with the law, car manufacturers
can continue to encourage law breaking with fast cars.
Maybe something should be done... like make speed limiters a legal
requirement for all new on-road vehicles. In the UK all cars have to
be tested once a year, and drivers are often stopped at the side of
the road for a spot check. A speed limiter could easily become
part of the usual tests.

PLEASE NOTE: This is NOT to say that rules placed on CB
manufacturers is wrong neither should they be removed ... but
that car manufacturers should have limits placed on the abilities
of their products in much the same way.
Of course, the police cars would have to be unresticted so they could
still catch offenders... until some "PedalClown" designs a "linear"
to stick up the exhaust to give you extra speed ;~)

Having agreed on one or two things and, maybe, gave you a laugh at the
idea of someone sticking a linear up their exhaust (steady on, I meant their
car exhaust), I am now putting you back in my "sin bin" in the hope of
bringing a little bit of peace to the group.

==

I can just imagine you sat there, watching the monitor, desperately waiting for the responses to your posts. You'll just have to get used to waiting, some of us have lives off the Net.
You act like everyone on the group has to answer to you... you post a question, then throw a "paddy" if you do not get an instant reply.

What makes you believe that anyone on this group has to answer to you? You have no automatic right to a reply, I have no obligation to respond in any set time, or at all. Considering how desperate you seem for responses, and how little "life" you have to fill your time with, you really should be grateful that we take the time to even read your posts.

Why don't you look at where the quest for figures started, easy enough to do, no Google searching needed...

> > <yeti@REMOVEcet.com> wrote in message
> > news:3d3415cd.33607344@news.cet.com...
> >
> > Yes it does, but by how much?
> >
> > By how much?
> >
> > By how much?

So, we can see who wanted to turn this into a p*ss*ing contest with figures. That was also the post where figures started coming into it.

So, the question has to be... Why did you ask for figures?
You often boast about your qualifications and experience, so it cannot be that you really wanted them. The original poster didn't ask for exact figures, so it wasn't for him. What we are left with is that you just want

an argument, you feel a need to make yourself feel better than everyone else.

You prove this with your responses... If I answer you, I am "trying to educate you" and you act offended, if I ignore you then I am "running away".

So, you don't want a reply and you can't stand to be ignored? I get it, you just want people to bow down and worship every word you type. Oh, and we must all join the "antis"... being legal is not enough, we must all act like assholes or we will get abuse from the "antis".
Unless we go on the "Pirate" groups, you don't really care that people break laws... as long as they do not do it on "your" newsgroup.

Is your killfile still not working, still unable to click that mouse? Admit it, you never intended to "plonk" me in a killfile, you never even use one, you love what we all have to say.
You will rush to reply to this message, then sit on the edge of your seat, waiting for the next post from me or one of the others you call "keyclowns" just because they will not join the "antis".

Brainbuster.

Why, do you know every british CBer?
Then what good would naming them on here do?
Exactly... none.

I have seen the "not my fault" attitude towards inteference. The crazy
thing was that, back in the 80s, a totally legal UK system was more
likely to intefere than on who used an illegal antenna mounted above
the height limit.

==
> You sure as hell weren't thinking for yourself when you tried to

==

See what I mean... damned if I do, damned if I don't.

I have reponded to several posts.
Have you also noticed that I do not get muct time on the newsgroup?
Have you considered that, when it comes to setting priorities, you do
not rate very high?
Oh yes, I already explained that to you... memory failing, or just
selective?

As I said, you would love me to help you fill this newsgroup with some
all night arguments... but it just isn't going to happen.
You want an argument so deperately that you are spreading it to other
threads on the group.

Your killfile still not working... huh. But then you could still see
Randy's posts when he was supposed to be in your killfile.

Yep, so desperate to "plonk" me that you are now replying to me
in other threads.

Brainbuster.

I'm not sure if this is exactly the answer you're looking for, but I'm reasonably certain that your dual antenna setup will never perform admirably because your antennas are not spaced far enough apart. They should be about 102" apart. While this doesn't explain why your SWR jumps from 1.4 on channel 10 to 2.2 on channel 9, it's something to consider. Also, assumming that your antennas are tuned correctly, spaced far enough apart, and fed in phase with each other, this will create a slightly unidirectional radiation pattern. Most texts I've read suggest that signals from the sides of the vehicle will be reduced (great on the highway, not too great elsewhere), while signals in front and behind the

vehicle will be increased SLIGHTLY. One book I've read suggests that 2-3db gain can be realized, but this assumes that EVERYRHING (phase, ground plane, spacing, etc) is as it should be. On an 89 Ford F150, even with mirrors that extend well to the sides of the vehicle, a 102" space between antennas will not be realized. A long time ago, I ran two 4' whips on my '68 F100 because I thought it looked cool. Problem was, they were too close together. I never could get SWR below 2:1. Man was I suprised at how much better a single antenna mounted on top of the cab performed. Like night and day.

Still, if you insist on running dual antennas on that truck, you won't get any grief from me. Performace problems notwithstanding, I still think they look cool. =)

Now, as to your specific problem, why don't you try this: Test each antenna individually, but with a single piece of coax. Don't disconnect an antenna while using your phased coaxial cable harness (assumming of course that is what you are using). Also, remember to re-calibrate your SWR meter when you test on a different channel. If your SWR continues to make a big jump between channels 10 and 9 as you descried, I would almost suspect the radio. This is strange, that's why I said to make sure that the meter is calibrated correctly. Anyway, try it with ONE known good antenna, and a single piece of coax. Oh, and grind the paint off the mirrors under the mirror mounts. The ground is better that way.

Gee, what a suprise.

>I have seen the "not my fault" attitude towards inteference. The crazy
>thing was that, back in the 80s, a totally legal UK system was more
>likely to intefere than on who used an illegal antenna mounted above
>the height limit.

I agree, and I have seen the same attitude, too. It's not just
confined to CBers, and not all CBers have that affliction. But you are
still avoiding the fact that running a legal rig greatly reduced the
likelyhood that you are causing interference.

>==
>> You sure as hell weren't thinking for yourself when you tried to

Call it what you want, you are still avoiding the issues.

>==
>> I noticed you didn't respond to that post --
>==
>
>See what I mean... damned if I do, damned if I don't.

That's because I called you on your BS, and now your choices are
limited to admitting that you didn't know what you were talking about

or run away. I see that you choose to run away by complaining a lot.

>I have reponded to several posts.
>Have you also noticed that I do not get muct time on the newsgroup?
>Have you considered that, when it comes to setting priorities, you do
>not rate very high?
>Oh yes, I already explained that to you... memory failing, or just
>selective?

You have explained it so well that I wonder where you found the time
to explain it!

>As I said, you would love me to help you fill this newsgroup with some
>all night arguments... but it just isn't going to happen.
>You want an argument so deperately that you are spreading it to other
>threads on the group.

I don't care if you post once a week, once a month, or once a year.
The posts are in the archives so I can just live my life until you
decide to face the issues. No sweat off my ass.

>Your killfile still not working... huh. But then you could still see
>Randy's posts when he was supposed to be in your killfile.
>Yep, so desperate to "plonk" me that you are now replying to me
>in other threads.

Don't flatter yourself: I goofed with the killfile. Got any more
elaborate excuses that you don't have the time to write? or maybe a
few more contorted diversionary tactics? Are you getting some coaching
from Twisty? It sure sounds like it.

Hi people...

Just for the record, Yes, I did have a hard drive crash, No it wasn't caused by the "anti-keyclowns", if anyone is to blame, it is Bill Gates for writing such a crappy Operating System. Like 95, 98, and ME... For the record, I was running Zone Alarm, Norton System Works 2001, and I had the latest updates to the virus protection files..., so, there was no virus on my system, if fact, my computer was off, and had been for like 8 hours and when I turned it back on, Hard Drive started acting crazy. and system crashed. Only thing I can think off is, we had some thunderstorms in the area, and possibly some EMF zapped the system... it never was very stable... it finally did me a favor and crashed.

I finally switched to a REAL OS. and a stable one!

You're placing alot of faith in a modulation "meter". Something that I
wouldn't do. A meter will not display distortions of the waveform, only
their relative combined value.
A scope can let you "see" the modulation, such that you can set the
percentage, while ensuring that the waveform is correct.

Which is why you should never depend on any one instrument to do all of
your work. A scope is useful for looking at modulation, or any other
voltage. It is, afterall, nothing more than a voltmeter, that displays
in the time domain. I use my scope sometimes just to measure voltages in
the power supply. The added benefit is that I can see the amount of
ripple present.

Not always. I've run across cases of incidental FM'ing of the VCO, that makes the audio sound raspy, but you can't see it on either a scope, or a counter, since the amount of FM is too small for the counter to sample. In this case, the only thing to use is a spectrum analyzer. But a scope can show distortions in the RF area, as "fuzziness" on the modulation waveform. Again, only a spectrum analyzer can quantify the distortion, but a scope can alert you to its presence.

Though I'm not a big fan of Win9x and am glad to see you move over to NT (ever considered 2000?), it won't help if you get a power surge due to thunderstorms. If the head in your hard drive makes contact with a platter - a true crash - you will still be out of luck. =)

Still if it WAS caused by a nasty spike, it would have no doubt rendered your hard drive useless (or at least badly damaged). Installing another operating system wouldn't cure it.

I made the move from Win9x to Win2k a while ago. I encourage my customers to do the same. Using Win9x machines frustrates me now. Hey, I've even convinced my REALLY cool customers to move over to Linux =)

Enjoy your new and improved computer

Dual antennas should be of the same type/model, should have equal lengths of coax, and should be of equal lengths. If you need to make an adjustment, you are going to adjust both equally.

For most of my beginning years in radio work, I had nothing more than a Radio Shack VOM, a fairly decent wattmeter, and an old heathkit signal generator. It's surprising what you can learn to do with crude instruments and a good ear. Now, I have more modern equipment, including a decent scope (Tek 2445), a Fluke counter, an H.P. Spectrum analyzer, H.P. signal generator, Tek audio signal generator, and DVM, and my still trusty Radio Shack VOM. I wonder now how I ever did anything before. There are so many things that you cannot see without the right gear. I guess most CBers are not overly concerned with accuracy, or spectral purity, so it's usually not an issue.

> And on the RF signal generator, you mentioned accuracy. That's a
> desirable quality =) How could I verify accuracy? Checking the frequency

> Almost done: Any recommendations on accurately measureing transmitter RMS
> power and PEP? I know that there are alot of wattmeters available, but
> somehow I can't help but believe that a $30 truck-stop unit is subpar - I
> could be wrong.

You are not wrong. Almost all wattmeters are affected by impedence mismatch, some way more than others. Most are only accurate on a good dummy load. Also, "peak" reading wattmeters, usually do not respond fast enough to accurately show modulation peaks. Again, the scope is the best tool for the job. Absolute accuracy is not even required. You just set your carrier to be 2 divisions high, then add modulation. If the peak is 4 divisions, you're at 100% and a peak power of 4 times what the carrier power was (2X voltage = 4X power). Plus you can look at modulation symmetry.

> I've heard that the old Bird Thruline wattmeters are
> great.

They are one of the most trusted and accurate meters out there. So much so, that a whole generation of CBers has created a unit of measure based on the Bird meter, the infamous "Bird Watts".

> A similar question: Can modulation percentage accurately be
> measured by a meter?

Not if you want the whole picture. A severely distorted transmitter can still show 100% on the meter, but the waveform symmetry is downright awful. Only a scope can show you what the waveform looks like.

> I've always seen examples of over and under
> modulation in textbooks represented on a scope. I somehow assumed that a
> scope was the only accurate way to measure modulation. If I was wrong,
> and a meter can do it, wonderful. I'm also curious as to how accurate the
> readily available and cheap meters of this type are.

Meters are cheap alternatives. They can accurately measure modulation percentage, but only if the waveform is symmetrical, and usually only with a steady tone. To really see what is going on, a scope is the only answer. A scope can display the modualtion such that you can determine whether the waveform is symmetrical (equal + and - curves), or to what degree it is distorted.

See above.

what happened was, the computer was off, due to me being asleep and
there were some storms in the area. and so, I shut down... Well, when
I turned it back on... I got a message from Norton saying my config
files were not found... and I thought, Oh great, norton's screwing up
again, and I turn it off and back, because it quit responding... and
so, when I did that I started getting all these error messages...
well, I ended up getting a windows ME disk from my Mom and I booted
and I ran Scanreg, fixed one problem, but when I ran scan disk, that's
when all the troubles were found... and that's when I decided to
format and start all over... I learned alot! Believe you me. Iearned
that a Windows ME Partition (or maybe a DOS partition?) and a Windows
NT Partition are two different animals and do not like one another at
all!

>I made the move from Win9x to Win2k a while ago. I encourage my customers

even though this analogy really sucks a normal sane person wouldnt care what happened during those 23 and a half hours he isnt using it as long as he gets his 30 minutes a day he needs and his phone bill doesnt rise. but if he did mind and it was a problem then he would simply get a new phone line that wasnt so crowded and be done with it just as the services that are legal for 27 megs have done. jim you used to be a cool guy but now you've turned into nothing more than a parrot repeating how wrong it is to have amps and use the freeband. why the change in your attitude on this group? i'd rather hear old stories about 500 megawatt stations running phone patches and the like than i would you complain everyday.....

NEBO DWEEBO SUCKS NIGGER DICK!

You are a faggotboy, i KNOW you enjoy your dick licking while it lasts, before you croak from AIDS, faggot.

I choose not to email you cuz you are a faggotboy who I enjoy reminding of his craving for penis.
You are a dick sucker just like the other ILLEGAL FAGGOT KEYCLOWNS that go behind the sleeper curtain to be
with a 9in. nigger dick
I feel remorse for your parents knowing what a faggot ass piece of shit u are.
BTW anti boys own the NG and you and you sperm lickin buddies cannot do shit about it--
NEBO DWEEBO SUCKS NIGGER DICK!!!

Oh why don't you cut the crap? You....are going to get a court order because someone is pissing you off, using a remailer....Please. Don't flatter yourself with this kind of talk. Do you really think that type of banter scares anyone? I hardly think so. Besides where have you been? Those anonymous remailers have been and continue to be used for the exact purpose you are whining about. Give it a break already. You aren't going to do anything about it, and nothing is going to happen. You know why. You ain't got the stroke. Besides you probably live in some po dunk trailer park anyways. Hell, relax and enjoy it.

Hell man, if it is in great condition, sell it on ebay. You are bound
to get some chump willing to pay big bucks for all that squeal.

2821. Astatic Mobile Max

Newsgroup: rec.radio.cb

Fellow CBers,

I have a friend of mine who is looking for an Astatic Mobile Max but don't want to pay $80.00+ for a brand new one. Does anyone know where I might find a used one. I saw one on ebay a while back, but I was not quick enough with the bid. I bid 35.00, it went for 36.50! I am willing to pay $50 or lower, depending on the condition of the unit.

Thank you!
Michigan Moonlite

2832. OT- How the Ancient Israelites really discovered the Internet

Newsgroup: rec.radio.cb
Date: 2002-07-31 17:39:16 UTC
From: Keith Hosman <arcweb@bnnorth.net>
Message-ID: <7hV19.5598$pv6.551060@cletus.bright.net>
Source record: 131861

In ancient Israel, it came to pass that a trader by the name of Abraham Com did take unto himself a young wife by the name of Dot. And Dot Com was a comely woman, broad of shoulder and long of leg. Indeed, she had been called Amazon Dot Com.

She said unto Abraham, her husband, "Why doth thou travel far from town to town with thy goods when thou can trade without ever leaving thy tent?"

And Abraham did look at her as though she were several saddle bags short of a camel load, but simply said, "How, Dear?"

And Dot replied, "I will place drums in all the towns and drums in between to send messages saying what you have for sale and they will reply telling you which hath the best price. And the sale can be made on the drums and delivery made by Uriah's Pony Stable (UPS)."

Abraham thought long and decided he would let Dot have her way with the drums. The drums rang out and were an immediate success. Abraham sold all the goods he had at the top price, without ever moving from his tent.

But this success did arouse envy. A man named Maccabia did secret himself inside Abraham's drum and was accused of insider trading. And the young men did take to Dot Com's trading as doth the greedy horsefly take to camel dung. They were called Nomadic Ecclesiastical Rich Dominican Siderites, or NERDS for short.

And lo, the land was so feverish with joy at the new riches and the deafening sound of drums that no one noticed that the real riches were going to the drum maker, one Brother William of Gates, who bought up every drum company in the land. And indeed did insist on making drums that would work only with Brother Gates' drumheads and drumsticks.

Dot did say, "Oh, Abraham, what we have started is being taken over by others."

And as Abraham looked out over the Bay of Ezekiel, or as it came to be known "eBay" he said, "We need a name that reflects what we are,"

and Dot replied, "Young Ambitious Hebrew Owner Operators."

"YAHOO", said Abraham.

And that is how it all began.

It wasn't Al Gore after all.

2834. FS RCI 2950 with extra's

Newsgroup: rec.radio.cb
Date: 2002-07-31 19:27:58 UTC
From: Jagzilla <jagulator@hotmailsucks.com>
Message-ID: <2TW19.80055$f05.3846951@news1.calgary.shaw.ca>
Source record: 131863

Has extra "channel guard" filter installed, to help prevent cross freq. interference. Also, installed is "AAA" battery system to replace onboard memory battery-no more hassles there when the battery croaks.Radio is in perfect working order, and appearance. Comes with original mic, owners manual, and the original box. Will ship anywhere in the world, buyer pays shipping costs. $170.00 US, or best offer.Please feel free to write me at jagzilla@stones.com for more info.

Poor Tim. Sounds like the kind of adult role model you crave is
someone who doesn't care if you steal or break the law and tells cool
stories about how they "got down" back in the day.

They didn't get cancelled, the mailboxes mysteriously got onto dozens
of mailing lists (likely by some illegal CB enthusiast from the NG).
Maybe it was you, Landshark. Who knows? Point is, maliciously jamming
my mailbox does you no good, because I'm still posting here - and will
ALWAYS be posting here. If you can't drive me off after 9 tries,
you'll NEVER drive me off.

> You can't, so please continue on your crusade of windmills,

Don't try and quote literary references, you'll embarass yourself.

Well, a scope will let you see the modulation envelope but the eye
can't tell if the waveform is a sine or a psuedo-sine. If you want to
get serious about of distortion, linearity and modulation it's best to
set up a trapezoid test and verify with the spectrum analyzer. But
it's a safe bet that if the audio going into the final is clean, the
RF is solid, and the final is working ok, then the only distortion
will be caused by a detuned filter network. This usually happens
because the screwdriver fairy made a visit to the radio in the middle
of the night, but it's easy to fix with a sig-gen and an RF voltmeter.
In fact, it's easier to fix that way than with a scope.

You bet, that's one of the best reasons to get a scope. But you don't
need a 100 MHz scope to see power-supply ripple. And don't forget that
a digital voltmeter can measure that ripple down to a few milivolts.

>distortion, but a scope can alert you to its presence.

I have seen that problem too, but a spectrum analyzer is not the only
way to see it. It shows up in the PLL loop as an audio signal. One of
the first things I do now is to put a scope on that feedback loop and
watch it under normal operating conditions.

Also, 'fuzziness' can happen on a scope even when there is no problem
at all because of some strong signal nearby. I live in the middle of a
node from a Class A AM broadcast station, and believe me it's annoying
as hell!

Hi Group,

Picked up a hr2510, very nice rig.

One problem I have having is that the knob to change frequencies sometimes will stop working. That is, moving the knob has no effect on frequency.

Any help?

Many thanks!

I'll concede that you received the email. But as far as I can tell it could have been -you- that sent all those emails just to stir up hatred against the supporters of legal CB. If you want to pin the blame on somebody, pin it on yourself -- you don't have to use your aol address, you don't have to post in the newsgroups, you know that kind of abuse exists, and you know what you can do about it. And considering you host your own porn site, you really don't have any justification to complain about anything offensive on the net. Now hop on your bicycle, ride down to your local red-light district and pick up some new whores for your website.

True the phone bill doesn't rise, but my guess is that he is going to get a bit upset that others are using that which he paid for. For the most part, I don't care. I do get a bit upset once that crosses 28.000 since a number of us HAVE paid for the service in terms of study to pass the exams as well as equipment. You will also note that the FM broadcasters really get their panties in a knot when someone takes up pirate FM broadcasting - even if it is on a channel not being used locally. You see, the broadcasters pay quite a bit for their licenses as well as equipment, taxes, payroll, etc for the use of the assigned frequency in an attempt to make money through advertising. Heck, if someone wants to use my phone and asks, no problem. It is when people not only don't ask, they start using it constantly that would get me upset. In any event, I am sure I swallowed a troll, hook, line, and sinker. Don't take me too seriously! ;)

73 from Rochester, NY
Jim
ps - again about the phone: as with the telephone if it occured once in a great while, I don't think anyone would likely get all that upset (well, maybe a few). Unfortunately, it appears to be headed towards a real free-for-all.

> no such thing as a "blanket license". Hmmmmm! Who's in violation of
> what??

CB radio DOES operate under a 'blanket authority" which is outlined by Part
95
of the rules. Those rules plainly state that "by operating this
transmitter, you agree
to read and abide by the rules of the service". Then those rules continue
to cover
various aspects of CB Radio--basically outlining what is legal and what is
not. It
was, BTW, those ITU regulations and agreements that dictated that CB is
limited to 4 watts output, cannot be used to contact stations over 155 miles
away. Sure,
you CAN hear "skip", but you don't HAVE to talk to those faraway stations.
It
wasn't ALL the mean, tightwad FCC that crafted those rules (Part 95); they
HAD
to set up the rules the way they are in order to get a CB Service by ITU to
begin
with. They never DREAMED that people would actually defy the law some 30-40
years hence. They even walked away from it, amazingly, expecting CBers to
pay attention to the rules. Look what happened. Privately, many FCC bigwigs
will tell you they wish CB would wither and die (not likely), but not out
loud for
fear that such a view would be unpopular. They hoped that cellphones, MURS,
FRS, etc. would draw users away from 27 MHZ. And, if the abuses on 11
meters continue, there could be some unpleasant consequences, not because
it would be popular, but because it would be essential to comply with ITU.

Hey Alan

Thanks for the input it was a great help ....but I like the look of the duel whips but i know it hurts the performance of the radio....I guess i want my cake and eat it to....I'm undecided on what I what ...put thanks for the help

Forget the duals. Just run one 5 foot or larger Firestik. Make sure the the base of the antenna has a good RF ground. Hinges and mirrors are not good RF grounds. Run a piece of braid from the base to a solid point on the vehicle. Don't use RG-58. Use RG-8M or 8X. Use coax that has a stranded center. Solid wire has a tendency to break quickly.

Don't forget to run the power wire direct to the battery with a fuse in the positive lead as close as possible to the battery (in case of short).

Better yet, never use solid wire in a mobile or high vibration environment.

I will agree that pretending to know the mind of God is not bright. But I have never believed that 'discriminating' is a bad idea nor that it is wise to pretend class does not exist.

Wouldn't dividing people into "respectable" and "rifraff" be considered "judging"?

Telling someone not to do something right after you've done so yourself is called hypocrisy. And using a Bible quote to do it is astoundingly ignorant.....

But that ain't the way it works, Frank. They swoop in, steal all your
equipment (even that which is not illegal), and then send you a letter
(Notice of Apparent Liability) which threatens you with a monetary
"forfieture" (fine). You then have 30 days to respond to the letter.

Nobody has to go to DC and appear in court. Not on a first offense, at
least. In fact, I've never heard of it at any offense level. At worst,
you'd be expected to appear in the regional US District Court, not DC.

Where do you get your information?

When your I-81 south bound and the fog is thick as soup CB is the MOST IMPORTANT RADIO ON THE PLANET!
You between the devil and the deep blue, You slow down you get rear ended and you go to fast you rear end someone and you want to pull over but you can't even see the shoulder. Thankfully other cb'ers show restraint and seriousness that most hams would never experience. You hear theres a slow one in the granny lane and you move to the hammer lane. After some tense moments u break clear, your sweating despite the ac but cb came through again.
CB saves more lives in one day then ALL hams EVERYWHERE since the begining of TIME!!!!!
Ken

You do realize, I hope, that the hackers refer to NT as "Nice Try"?
It's just as buggy ans full of security holes as consumer grade
Windoze.

BTW, Win98SE is a perfectly stable system, too; IF you know what
you're doing.

And I bet you left your modem connected to the phone line (causing the
crash). I had to rebuild my old Apple several times before I learned
to unplug Ma Bell!
The EMF (even from a lightning strike several miles away) induced on
the phone lines will zap chips like you can't believe.

Well, you could put up both antennas but just connect one of them. You
probably won't notice any difference between running one antenna or
two. I never have.

In this case, it probably is. MicroShaft has a nasty habit of putting
out half-baked, non-debugged, un-compiled Operating Systems and
expecting the consumer to do their beta testing for them.

In any event, this is definitely off-topic in rec.radio.cb, isn't it?

>Ken

That's a pretty stupid thing to do, driving in those conditions! Yeah,
we get plenty of fog here too, as well as white-out conditions in the
winter. Here's a hint: slow down and keep edging to the right -- you
will find the shoulder eventually. If you think your vehicle might get
hit then get out of the vehicle and stand a safe distance away. Better
yet, make your way to the nearest exit or crossroad and wait. Even
better, when you know a road is fogged in, find another route. But
driving in those conditions is absolutely ignorant, and you know why:
several times a year there are big pileups on the freeways just
because people don't have enough common sense to drive according to
the conditions. People die in those pileups, and I'll bet you that
most if not all of those pileups included truckers with CB radios. If
you think CB radio saves lives because it lets you plow through the
fog then you are dumber than dumb!

An NTFS partition is not readable by Win98. A FAT32 partition is
not readable by Win95a. You can go the other way, though. The newer
systems can read the old file systems.

> I'd like to play with Linux sometime down the road... just have to

The look is similar, the operation and settings are not in NT40. Win2K
is much more like Win98 in settings and operation, however, there are
many things different between the two. Have fun learning.

Whatever you want to do Frank, your call.
It too hasn't made me go away, so whatever floats
your boat. Again, coming to Aaron's defense, just
because I asked why he had 9 different accounts pulled
in a years time.
My main account (to which you have received email) is
the same its been (with the exception that SBC took
over PacBell) for years.

Well open your eyes and read this: my account has never been pulled.
Ever. For no reason.

> >If you can't drive me off after 9 tries,
> >you'll NEVER drive me off.
>
>
>I haven't done a thing to you, again you're trying
>to advert attention from why you had 9 accounts
>pulled out from under you.

I just told you my account has never been pulled, cancelled, yanked,
or limited in any way. If you wish to fantasize the opposite, go
ahead. But it doesn't make it real.
>
<snip>
>Again, trying to advert attention away from why your
>accounts have been pulled.

They have never been pulled so there's nothing to "advert".

Sigh. When you espouse lawbreaking on a NG and someone (like me)
opposes you, I guess about all you can do is call them a nazi and a
tattletale and try and drum up hatred against them. Somehow I expected
a more intelligent response though. Instead all I get is your Beavis &
Butthead version of Constitutional Rights: "It's a free country, see,
and that means I can do whatever I want! Huhhuhuhuh!"

>Freedom of speech, of the press, of association, of
>assembly and petition - this set of guarantees, protected

>rights, like the right to vote, would wither and die

Where does the Constitution say anything about your right to disobey
FCC law?

2895. When NOT to quote the rules and regulations

Newsgroup: rec.radio.cb

From: Jim Hampton <aa2qa@FrontierNet.net>
Message-ID: <ukh82ug65nuee5@corp.supernews.com>
Source record: 131924

For everyone's information, what happened on Guam was that the EXECUTIVE OFFICER wanted a phone patch. When the ham shack didn't offer enough signal (we were received, but partly buried in noise in the US), he asked if we could listen if we transmitted somewhere else. When answered in the affirmative, he called up the transmitter site and ordered a 40 KW military transmitter on a rhombic antenna pointed stateside. In the absence of the commanding officer, the XO WAS the law. There are times when it is not in one's best interest to start quoting the law. That was one of them. He got his patch.

I must agree with this post. As a professional driver you should be taut as
I was to avoid those conditions and when you are in them from your own
stupidity you keep 100% of your attention on the road NOT on your CB or
cell-phone or stereo. You slow down, put your 4 way flashers on and don't
over drive what you can see and stop in time for! A post like this is an
embarrassment to all of us that have pro class drivers licenses.

>One problem I have having is that the >knob to change frequencies sometimes
>will stop working.
Try some spray on contact cleaner..and
be sure to power down the radio! Spray into the switching mechanism, spin the
knob. Dont turn it back on for a
while and maybe a little warm air from a blow drier. Careful the stuff will eat
plastic especially the clear from window. I think all the knob controls is a
5VDC switch going up/down so a replacement wont be real hard to locate.

I agree that it wouldn't have been an appropriate situation to quote
the law. What law would one have quoted, anyway? I've never seen any
federal regulations governing power levels, modes, and frequencies
used by the military.

I just thought it was funny that Tim took your 40 KW story as
affirming "keyclown brotherhood".

It's time for me to add my 2 cents.

You want a scope. Period.

The radio world does not only exist in the AM only realm. It has a counterpart in the SSB area as well.

When aligning an AM rig you'll want to see the waveform and adjust as necessary. Using a single tone from a tone generator is ok but you won't see what a complex voice is doing to the limiters.

During a SSB alignment you'll want to make sure the bias and alc is set not just for factory specs but to see if the rig requires more or less than factory spec.

If you're putting an amp in line for some ssb use you'll want to see the pattern so that you can adjust the alc for best linearity from the amp.

There are more accurate measurement methods but the scope affords an an equitable trade-off between speed/ease of use and accuracy.

To a trained eye, the scope can easily alert you to the prescence of harmonics, noise and other disturbances in the signal. It may not be the best device to quantify these anomalies but you can sure use it to get rid of the errors.

In todays economy there are several companies offering quality scopes at excellent prices. You dont have to have a 100mhz scope but there's barely a difference in price between a 100mhz used scope compared to a new 30 mhz scope.

If your bent also includes digital then you'd be best advised to invest in a 100mhz or higher speed scope because digital presents problems that a 30mhz

scope wont see.

"dave, does your pair of glasses on your face have a little piece of duct tape holding them together in the middle??? you seem like a real p*ssy if your scared to go talk to another man about a problem your having with him. your the type of man nobody respects because you never deserve it."

Tim,

If I wore glasses they would definitely not have tape holding them together. I firmly believe in keeping my things in good working order. As to being scared to talk to another man; There is a difference between talking to someone about a problem and creating a problem. If talking was all that needed to be done then wouldn't gettin' on the mic and telling the offender how you felt be enough? Hell, tell the guy some details about his house and let him know he's causing interference. Doesn't often work. When you step on to someone's property you better be prepared. I don't like people near my property or other worldly goods. So I afford others the respect I ask of them. Don't come knocking on my door and I won't come knocking on yours. I don't care about this whole legal vs. illegal crap that's eating up this news group. People are free to do as they wish. If I feel a person is doing something I can not overlook then I get involved. I just know how to pick and chose my battles. I also know interference on some electronic devices is not worth knocking on a strangers door over, that's what the FCC is for.

If you want to have a pissing match we can. I just really don't see it being worth it. I'll save you the trouble of insulting me further and tell you the out come of a pissing match between us:

Lots of trading insults and ideas, blah blah blah. In the end I would throw my hands up in frustration and give up. You would get the championship cup and our lives would go on. Sounds like a waste of my fucking time.

Dave

I seem to recall that the 4740 was the same as the Tram D64. It was a pretty neat radio and had an excellent rcvr. You could get a lot of audio out of that radio. Am I wrong in the model? I remember it had a pll brd located inside a shield canister.

If this is the same radio as I think it is, check the pll section. The pll had a tuneable filter section. If this section was mistuned you would see a low output and unstable power output that changed with temperature and frequency. I also remember this pll was capable of going spurious. The pll IC was noted for going bad/intermittant due to static electricity from a finger touching the pins. I seem to recall an antenna relay in their as well. If the relay is dirty you will have the same result. The PLL brd had a series of jumpers from the main brd to a second pll brd that were very brittle and would break if the brds were manipulated too many times.

I just remembered that they dropped the soft wax onto that pll brd to prevent microphonics from vibration. You may need to melt that wax off and check for bad solder connections on the output brd. I seem to recall that radio had a problem with poorly soldered connections around the pll IC.

The more I think about it the more convinced I am that it's poor solder connections around that pll brd causing your problem. Be very carefull around that brd and use a grounded iron to resolder those connections.

good luck

2910. Pyramid Power Supplies

Newsgroup: rec.radio.cb
Date: 2002-08-01 08:35:22 UTC
From: "Alan S." <subnet@hotmail.com>
Message-ID: <Xns925D104AA4C31subnethotmailcom@216.168.3.40>
Source record: 131937

Gentlemen,

I've noticed that Pyramid power supplies can be had for a reasonable price (compared to say, an Astron). I've read varying opinions on the quality of these units. There seems to be a question as to just how long a 20A Astron (for example) will perform under a full 20A load. So I wonder, how would a CB that will probably never pull more than 3A or so perform?

Note that I don't like to skimp on quality, however I don't like to aquire equipment that is over built for my needs (mostly CB related). I mean, how ripple free does the voltage REALLY have to be? And if the voltage drops to say, 13.7v, how serious of a problem is that? Ideally we want absolute perfection, but in reality, I'm not sure I need to fork over 300 clams for a power supply.

Thoughts, wise men?

-Alan S.

P.S. The O-Scope suggestions were absolutely invaluable. I couldn't have asked for more information. I sincerely hope that I am able to contribute knowledge as valuable as yours to the group someday. Thank you.

Just to add a couple cents. The Astrons are rated with the full load for 5 min's on and 10 or 15 mins off. The Astrons will perform well at rated output and can be abused to a small degree. A fan would be a good idea if you plan on running the supply at or near full output for extended periods of time.

Well let's see, for starters:

s3buell@pacbell.net
lndshark@ix.netcom.com
Landshark@TheLandshark.com
s3sharkman@hotmail.com

I can even post headers if you want. How many more have you used,
sharkie? And don't forget that time when I caught one of your aliases
right away!

BTW, is SBC part of Prodigy? I ask because of the message ID of your
last post, as you can see in the top line of this post as well as your
header.

But that's right, you had an excuse for all those posts, didn't you? You still insist that it wasn't you that posted in those transvestite and transexual newsgroups, don't you? You want people to take you at your word when -you- post an excuse, but you won't take anyone else at their word? Don't forget that you don't have any proof that Aaron's accounts got yanked, but the archive is full of proof that you like to yank other men. Are you beginning to see the light yet? Or do I have to spell it out for you?

No different than if you ran it off a power supply rated for 3 Amps.

>Note that I don't like to skimp on quality, however I don't like to aquire >equipment that is over built for my needs (mostly CB related). I mean, how >ripple free does the voltage REALLY have to be? And if the voltage drops to >say, 13.7v, how serious of a problem is that? Ideally we want absolute >perfection, but in reality, I'm not sure I need to fork over 300 clams for >a power supply.

No, you don't need to spend gobs of money. I have a couple of RS's 12 volt regulated power supplies (13.8 volts nominal) and I have never had a problem running any CB from them (except for that Johnson Messenger II -- a tube-type CB). If a power supply is well-regulated, then the voltage isn't going to change more than a few millivolts from no-load to full-load, and with almost no ripple. Since your CB is going to be pulling 3 Amps only during transmit, you can even get by with a power supply that is rated for a lower continuous current, but it must be rated for at least 3 Amps intermittent duty. The duty cycle is usually determined by the heat dissipation of the regulator, not by the amount of voltage drop or ripple.

Even if you want to buy a 20 Amp or larger supply, watch what you buy, because a lot of these "regulated" power supplies have very poor regulation. Many of them are just a few parallel 2N3055's (or other power transistors) controlled by a zener, which has no better regulation than a wall-wart.

2915. Re: Oscilloscope Question

I should add that, since the beginning of radio, engineers have been designing radios at frequencies that exceeded the capabilities of any oscilliscope at the time, and that is true even today. Engineers, technicians, repairmen and hobbyists have been working with RF all these years mostly without the ability to directly observe the RF signal. They did a fine job with the equipment they had -- plus a little understanding and ingenuity.

My point is that you don't need to see the signal on a screen to know what it looks like, and there are much better ways to measure the characteristics of an RF signal that to look at it's picture on a CRT.

yeah sure, if you don't download the updates and the service packs and
don't run a firewall... allof which I do.

>BTW, Win98SE is a perfectly stable system, too; IF you know what
>you're doing.
>

Tell that to this AMD 300Mhz which would crash with blue screen almost
on a daily basis. and as to your feable attempt to slam me, fuck you.

>And I bet you left your modem connected to the phone line (causing the
>crash). I had to rebuild my old Apple several times before I learned
>to unplug Ma Bell!

Well, being I am running a cable modem, it would be kinda hard to
unplug it. although, I think I will be unplugging the nic card cable
going to the modem.

>The EMF (even from a lightning strike several miles away) induced on
>the phone lines will zap chips like you can't believe.

This part is true, I used to run a 33.6 USR modem and we took a nearby
strike. and it blew a SMT on the board. needless to say, that modem
was TOAST. also messed up a motherboard. Nowdays when the t-storms are
nearby, I shut down EVERYTHING, even the cable modem... and the radio
(kenwood) and unplug the coax from the back... these people that just
leave they're coaxes hooked up and say, "oh, it's grounded..." must be
absolutley nucking futs! I unplug... I know it's a pain, but I'd much
rather have to do that, then send in this 950sdx to kenwood service
and it's been out of warranty for like 6 years now... I could only
figure how much the service bill would be... not me! There's an old
saying, something to the effect of "A little ounce of protection"... I
don't remember the rest. anyhow, I think you get my point...

73 to all

> >> what it looks like, and there are much better ways to measure the
> >> characteristics of an RF signal that to look at it's picture on a CRT.
* While undoubtedly there are more precise ways to measure these waveforms
there are few that are more easily and quickly employed.

> Most people can't look at an RF signal on a scope and see the wave
> being compressed.

* Why can't you see a compressed waveform? Anytime you're looking at a radio
with the limiters intact you're seeing a compressed audio pattern. Run the
input up past where the limiting action begins and you are looking at
compressed audio. Disable the limiters and run the input up again and you'll
see where the output is overmodulating and compressing. Tune the final
output for it best peak output on the scope while watching your current
meter and you'll be very close to the correct conjugate match for the peak
power level you're running. Perhaps I'm not understanding your vision of a
compressed waveform.

> You can observe a basic symmetry, but unless you
> hold up a stencil to the screen you can't say for sure just how
> symmetrical it is.

* I'm curious as to what you call symmetry. Are you expecting to find a high
fidelity output that allows a square wave to be processed correctly? I cant
think of one radio that doesn't band limit or otherwise introduce some group
delay in it's modulation section. You can see all the symmetry you need if
you know how to interpret the scopes representation.

> You can't determine linearity just by looking at a
> modulated RF waveform.

* To an acceptable degree you most certainly can. Ever since scopes came
out, hams and broadcaster's have relied upon what they are seeing as a
suitable guide for linearity. Remember, your trapezoid patterns are on a
scope as well.

> You can't see audio distortion that may be
> caused by the final.

* Really? What distortion are you refering to that may be caused by the final? Flatopping? IM? Harmonics? Crossover distortion? All of these errors introduce artifacts into the viewed waveform if you're paying attention. While not the very best way to monitor these errors, the scope still remains usefull in quickly determining the prescence of undue amounts of each.

> You can't see symmetry of the audio component in
> an RF envelope because the ground is for the RF, not the audio.

* I'm not really sure what you're getting at here. What has the ground got to do with it? Just demodulate the audio with a good probe and viola' you have an excellent view of whatever symmetry you're looking for.

> You can't tune a final with a scope because you will only be peaking the
> voltage, not the impedance. In fact, you can't tell much by looking at
> the envelope except that it "looks good", and the only thing you an
> quantify is the voltage.

*Wouldn't the voltage and current also be hand in hand with the impedance? Keep an eye on the scope and a current meter and you'll be very close when tuning for conjugate match at whatever power level you deem important.

> A scope is a basic intrument, but no matter
> how much you pay for one it is not going to be good enough to replace
> any test equipment designed for specific RF and AF measurements.

* For years now, a scope sure seemed to satisfy many regulatory agencies for rf and audio measurmenets. Naturally a scope won't replace a spectrum analyzer or perhaps a distortion meter but in lieu of a fat bank account it will do for most cases.

> > Using a single tone from a tone generator is ok but you won't see
> >what a complex voice is doing to the limiters.
>
> That's why they invented the two-tone test, and white (and pink) noise
> generators.

* I'm curious as to what instrument you use to qualify your two tone or gaussian noise tests. I'm betting the device you use costs a bit more new than a scope.

> >During a SSB alignment you'll want to make sure the bias and alc is set
not
> >just for factory specs but to see if the rig requires more or less than
> >factory spec.
>
> There is an interesting analogy here: If the only way to tune a car
> was to put it on the rollers, many of us would still be using the
> horse and buggy. But for auto work they have compression guages,

> timing lights, voltmeters, etc, and they work just fine for getting
> your car in excellent running condition. And they work better than
> sitting under the hood and making adjustments at 50 mph.

* I don't have a clue..not a friggin clue what you're analogy is here. But what better way to ensure you've managed to coordinate all you're combined test/alignment procedures into the desired result than to put it on the rollers? You advocate not final testing the outcome of you're "tweaking" by full power testing? What happens if there's a problem that only occurs at or near full output?

> SSB is easier to adjust than AM. The final is class AB, so bias isn't
> a big issue (if it's running Class C then something is bad, and the
> audio will tell you if that's happening).

* And you would trust your ears listening to a monitor for something before you trust your eyes on a scope? Your ears must be pretty good then. I think it's a safe bet that a scope will show the distortion well before your ears and monitor will.

> The ALC, if the radio has
> one, is set with a steady input and a power meter, and as long as you
> are are not trying to peak it above specs then you don't have to worry
> about clipping. Even if it does clip you will hear it in the monitor
> and you will see it on the audio distortion analyzer. In either case,
> you will detect a problem sooner than you will with a scope.

* The onset of clipping will not likely be heard on the monitor and is best checked for with a different device.

> >If you're putting an amp in line for some ssb use you'll want to see the
> >pattern so that you can adjust the alc for best linearity from the amp.
>
> The amp should be linear to begin with. Regardless, any amp should be
> tested independently for linearity, and you can't do it by simply
> looking at an envelope.

* The scope may not be the perfect device for checking linearity of an amp but it sure is a fast and reasonably accurate way of seeing if there is a problem requiring further investigation with more precise instruments.

> At the very least you need a trap test, but
> even using just a sig-gen and a power meter will give you a better
> idea of linearity than by looking at the wave on a scope.

* Isn't your trap test viewed on a scope? And no, your wattmeter will not give you a better representation than the scope will.

> You can even use that method to quantify the linearity by plotting the
output to
> input and calculating your deviation, something no scope is capable of

> doing.

* Not capable? First off, the test you describe is not really one of linearity as it is a test of gain and P1db. Linearity in my terms means a waveform lacking artifacts not found in the original driving signal. Secondly, a dual trace scope will easily provide a more precise representation of the input/output ratio especially if it has a dvm and math functions built in.

> >There are more accurate measurement methods but the scope affords an an
> >equitable trade-off between speed/ease of use and accuracy.
>

>
> Now that's just plain hogwash! There can be distortions in an RF
> signal that -nobody- can see on a scope!
> Motorboating, * Why can't you see a low freq. tone impressed on a faster waveform?

> RF compression, *As I said, I may not be understanding of your term here. You can see, on a scope, when youre reaching the P1db point.

> class AB2 distortion, * You'll see the crossover distortion on a scope easily enough. It may not be as precise as say a audio distortion meter or a spectrum analyzer but you'll see it before it reaches undue levels.

> asymmetrical modulation, * This is easy to spot on a scope.

> and even some high-freq harmonic content won't be visible * depends on the scope and you'd need to define hi freq. As I said the scope isn't a replacement for a spectrum analyzer but with a decent scope you'll spot most errors produced by appreciable levels of harmonics. It will provide you with a reason to suspect there are hi levels of harmoinc energy at the very least.

>I don't care how well-trained your eye happens to be. Mine has been
> trained for more than 20 years on lots of different types of radios at
> freqs from DC to microwaves, and there is stuff that even *I* can't
> see on a scope just by looking at the wave.

> If the O-scope was such a do-it-all piece of equipment, then why have
> engineers and technicians even bothered to invent all this other test
> equipment? equipment that is used more often than the scope?

* The choice of test equipment a tech uses first is up to personal preference and defined moreso by the DUT's characteristics. Taken a step further, why was the scope even developed in the first place and before all the fancier gadgetry? Ive never postulated it was the end all-be all of test

devices. I simply stand up to say don't discount it as a usefull first line device that requires minimum investment (as equip goes) and setup/use time in determining whether more elaborate devices are required.

If you're injecting a sinewave from an audio signal generator, it is
fairly easy to determine waveform symmetry. My eyes are not that bad
yet....;)

> If you want to
> get serious about of distortion, linearity and modulation it's best to

Well, yeah. That just adds credibility to the point that you need more
than one instrument to do a complete job.

> In fact, it's easier to fix that way than with a scope.

I don't know about that. You can't easily determine if the audio going
into the final is clean without a scope to view it. I guess it's all
what you're used to using. I've already tuned up a radio using just the
scope as the RF voltmeter. Tune for the widest trace. At the right input
voltage setting, they are pretty sensitive and just as precise as a
meter. The meter will give you a better absolute reading value, but the
scope is fine if you are only interested in relative readings. The other
advantage is that during the tune up procedure, if any RF stage has any
instabilities, that would affect modulation distortion, it will
immediately show up.

If you are going to be working on a variety of radios up to VHF, then it
is helpful to get the best scope that you can afford. A 35 Mhz scope is
probably ok if CB is the only band you'll ever be working in.

Another reason to have a scope. But the probe better be a high impedence probe, or you stand the chance of loading down the VCO. Also, in many of those "FM'ing" cases, the problem disappears when the cover is removed, making troubleshooting much more difficult. In this case, the spectrum analyzer or communications monitor is the only way to see it.

>

if i have a problem with you i would come knock on your door and tell you and if you have a problem with me i'd like to know before you started taping, spying, and reporting me to the authorities. guess thats just the type of guy i am. i see no reason for all the sneaky shit. your like one of those guys that the teacher would leave in charge of class to make sure everybody was silent while she left the room. you'd never be brave enough to tell us all to stop talking yourself but when the teacher comes back you shure have a list of names for her to tell. you say that debating something on usenet is a waste of your time yet you enjoy tracking down and turning in cb'ers who bleed over your clock radio hoping the fcc will spends thousands of dollars and lots of man hours investigating and doing something about the problem you could have just solved by letting the guy know yourself. now surely your right, if you go to a mans door and act like a self righteous dick head towards cb'ers in his face like you do on this newsgroup then i can see why your scared to meet him. the way 99% of the grown men act on this board would never be brought to the real world because y'all enjoy being anonymous cowards and would be too embarressed to act ths way and have people know who you really are. here you suggest riding by a guys house, telling him details about it, then threatning him to stop his operations. well i dont know where your from but down here in the deep south riding by and scoping out peoples homes and then threatning them with the information is not taken lightly nor as a friendly suggestion so i guess after alot of thought it is best for you to keep doing what you do from afar or a nice cb'er in your town will likely make sure you need some tape on your glasses next time.

> some po dunk trailer park anyways. Hell, relax and enjoy it.

if you are afraid to stand up for your rights, that's your problem. i am not afraid to speak out about blatant abuse and harassment. and as a courtesy and legality, i do give warning of my reactions to someones actions. and in regards to remailers, just because they are being abused, doesn't mean they can't change.

i'm wondering, if you happen to see someone or maybe an animal being abused, do you let it continue or do you try to make it stop?? if an elderly woman gets her purse snatched right in front of you, do you try to catch or stop the crook?? a persons actions against injustice says tons about moral character and integrity, but this is JMHO.

Why yes it is, but being the internet detective, you knew that, right?

>
> But that's right, you had an excuse for all those posts, didn't you?
> You still insist that it wasn't you that posted in those transvestite
> and transexual newsgroups, don't you?

Yes Frank, or is this Aaron? No that's right your not him.
How do I know that this was Frank who typed that message?

>You want people to take you at
> your word when -you- post an excuse, but you won't take anyone else at
> their word?

Sure, it depends on the situation, doesn't it. 9 accounts in only
one year. 2500 + posts in one year for Aaron. I've had only two accounts,
meaning Netcom and PacBell/SBC and those screen nics and a few others, but
we're looking a 12 year period.

>Don't forget that you don't have any proof that Aaron's
> accounts got yanked, but the archive is full of proof that you like to
> yank other men. Are you beginning to see the light yet?

Sure Frank, I see where your going with this, you just don't understand that
it doesn't bother me because my conscience is clear.

> Or do I have
> to spell it out for you?
>
As I said before, whatever you want to do, you seem to already started
haven't you?

Hello Alan,if you had A hr2510 I would think 15-20amp would be enough ,but if you only need A little pick up A 12amp pyramid supply you can get in the states for chump change ,but keep in mind if you are going to upgrade to A more demanding unit that is going to need more then that can output and I have found that the pyramid overrate there units so if it seez it is 12amp it really only about 7-8 amp . Astron is A better supply but like everything else in this would it is being made cheaper to try contacting A.E.S. you should like the prices . Point of interest A friend of mine has A 2990 and the internal supply crapped out so I repaired it and found him an astron 50 amp and it uses about have of that at about 175watts see if H+Y they will have the cheaper units available .

2928. Legal? "CB" listing issues with Ebutt

Newsgroup: rec.radio.cb
Date: 2002-08-01 17:08:42 UTC
From: "Arthur R. Howard" <whtmtnman@citlink.net>
Message-ID: <3D496B1A.BCD4EC4@citlink.net>
Source record: 131953

This post was prompted by someong asking why Ebutt allows a 2510 to be listed in the CB catergory.....
Hell...I got one of their cute little "Can't list this" notes.They dont know legal from shit and as far as bowing down to the fcc.I do not beleive they ever got such a notice.
If they did it had no real legal bearing.
My "nasty gram" was prompted by listing a Ranger 6900F TB.I know why I got the notice.The ad was up for 4 days and I had bids
THEN some dickhead "Kilocycle cop"sent me a mail asking about the frequencies and power making like he was interested.
He was so damn obvious.......and I told him so.Then he sent back a mail ranting about rules etc.
Now then,as far as a 2510.Do me a favor all of you descriminated against citizens.Do what I did ...go thru all the cb ads find all the shit that is "according to Ebutt"inappropriate and then go to the section where you notify them and do so.(I found 183 ads for "illegal to use on 11 meter items"at the time I got my ad cancellation.Send a letter like I did stateing that they dont know the first damn thing about what is legal or not.In fact their action in deleting these ads is illegal and descriminitory.In fact if you have more than one email do it with all of them.
I would make the list and post it in this ng and every damn CB forum I could find to save others that are concerned the trouble of having to search the ads complain to Ebutt also.
After they get flooded about 10,000 mails complaining that until they put someone in charge of deciding what gets deleted that knows what is "legal" to use on 11 meters or not that their action is DESCIMINITORY.
Then after they send their cute little "we'll look into it"BS.Hammer them again.
Anyone interested helping with this can get in touch with me.Unlike others...I post with my real email....Arthur

> CB that will probably never pull more than 3A or so perform?

As long as the power supply can supply the current required by the radio that is adequate. A radio that draws 3 amps will not perform any better on a 20 amp supply than on a 3 amp supply. The radio draws whatever current is required. Having a supply that will supply more current is OK, but it doesn't make the radio perform any better. If the radio draws 3 amps and the supply is rated at 3 amps, then the supply is going to work pretty hard unless it has been well designed to run at 3 amps continuously. A 5 amp supply would run cooler.

>
>When aligning an AM rig you'll want to see the waveform and adjust as
>necessary.

Most people can't look at an RF signal on a scope and see the wave
being compressed. You can observe a basic symmetry, but unless you
hold up a stencil to the screen you can't say for sure just how
symmetrical it is. You can't determine linearity just by looking at a
modulated RF waveform. You can't see audio distortion that may be
caused by the final. You can't see symmetry of the audio component in
an RF envelope because the ground is for the RF, not the audio. You
can't tune a final with a scope because you will only be peaking the
voltage, not the impedance. In fact, you can't tell much by looking at
the envelope except that it "looks good", and the only thing you an
quantify is the voltage. A scope is a basic intrument, but no matter
how much you pay for one it is not going to be good enough to replace
any test equipment designed for specific RF and AF measurements.

> Using a single tone from a tone generator is ok but you won't see
>what a complex voice is doing to the limiters.

That's why they invented the two-tone test, and white (and pink) noise generators.

>During a SSB alignment you'll want to make sure the bias and alc is set not
>just for factory specs but to see if the rig requires more or less than
>factory spec.

There is an interesting analogy here: If the only way to tune a car was to put it on the rollers, many of us would still be using the horse and buggy. But for auto work they have compression guages, timing lights, voltmeters, etc, and they work just fine for getting your car in excellent running condition. And they work better than sitting under the hood and making adjustments at 50 mph.

SSB is easier to adjust than AM. The final is class AB, so bias isn't a big issue (if it's running Class C then something is bad, and the audio will tell you if that's happening). The ALC, if the radio has one, is set with a steady input and a power meter, and as long as you are are not trying to peak it above specs then you don't have to worry about clipping. Even if it does clip you will hear it in the monitor and you will see it on the audio distortion analyzer. In either case, you will detect a problem sooner than you will with a scope.

>If you're putting an amp in line for some ssb use you'll want to see the
>pattern so that you can adjust the alc for best linearity from the amp.

The amp should be linear to begin with. Regardless, any amp should be tested independently for linearity, and you can't do it by simply looking at an envelope. At the very least you need a trap test, but even using just a sig-gen and a power meter will give you a better idea of linearity than by looking at the wave on a scope. You can even use that method to quantify the linearity by plotting the output to input and calculating your deviation, something no scope is capable of doing.

>There are more accurate measurement methods but the scope affords an an
>equitable trade-off between speed/ease of use and accuracy.

Not if you know what you are doing and have an understanding of how the radio works.

>To a trained eye, the scope can easily alert you to the prescence of
>harmonics, noise and other disturbances in the signal.

Now that's just plain hogwash! There can be distortions in an RF signal that -nobody- can see on a scope! Motorboating, RF compression, class AB2 distortion, asymmetrical modulation, and even some high-freq harmonic content won't be visible just by looking at an RF envelope, I don't care how well-trained your eye happens to be. Mine has been trained for more than 20 years on lots of different types of radios at freqs from DC to microwaves, and there is stuff that even *I* can't see on a scope just by looking at the wave.

If the O-scope was such a do-it-all piece of equipment, then why have engineers and technicians even bothered to invent all this other test equipment? equipment that is used more often than the scope? Was the freq counter developed to be a piece of backup equipment? Are RF voltmeters and distortion analyzers currently being manufactured because some technicians can't see a thin green line? No. The O-scope is your backup equipment, not your primary tool. Back in the early days of radio the o-scope was an instrument reserved for well-funded laboratories. Techs were able to get the radios working without them back then. Why? Because they are not needed.

> It may not be the

>
>If your bent also includes digital then you'd be best advised to invest in a
>100mhz or higher speed scope because digital presents problems that a 30mhz
>scope wont see.

I'll even go out on a limb here and say that you can't find a CB radio with a problem that I can't fix without a scope. And I don't mean just a high-frequency scope, but ANY scope, spectrum analyzer included! Not only that, but I can tune it closer to specs! And I can do it with equipment that, in total, costs less than half of the price of a brand new 30 MHz scope!

Like I said before, the oscilliscope is a piece of equipment that you really want to have in the shop, but don't overrate it.

Sure you can, just hook up your audio distortion analyzer to the
modulation output. That's a standard procedure. A scope is not very
accurate for measuring distortion, but will work as a backup.

> I guess it's all

I'll agree with that, too.

But that's true with or without the scope. And what a scope may not
show you (while watching an RF envelope) is a slow sawtooth on the PLL
loop -- the scope will trigger out the drift.

I don't agree, but to each his own. My first choice is the comm
analyzer (obviously), but I put more faith in the test equipment
designed specifically for the jobs than in a do-it-all-but-not-as-well
device such as the o-scope. The scope has it's place as a fundamental
and versatile instrument, but even with all the bells and whistles it
is still just that: fundamental. IMO.

10 meg is standard. Many times that sawtooth is slow enough to see on
a VTVM.

> Also, in many of
>those "FM'ing" cases, the problem disappears when the cover is removed,

I have rarely found this to be the case. The problem isn't very
common, and most VCO's are located in a seperate shielded box, but the
loopback signal can still be measured outside that box. Sometimes the
lid has already been removed (for reasons I can only guess), and in
that case I replace it. (For the young, budding repair technician,
here's some good advice: always keep a stock of tin and copper sheet
handy for purposes you won't realize until you need it.)

RG-59 is no longer used by cable companies. They use RG-6 now. Strip some
of the 59 and use the braid from that to ground the mount. Copper erodes
quickly in air, so crimp some terminals on the ends and solder the crimps.

Good idea. Maybe they'll ban Aanal Aaron for total Bovine Excrement
emails! He is definitely cutting into their profits.

The HR2510 is perfectly legal for 10 metre use. Aanal Aaron is not
legal on ANY band!

richcranus@yahoo.com (Richard Cranium)
>There is nothing illegal about a Uniden HR2510
>- IF it is listed unter amateur radio.

Wrong. See below.

>It IS illegal for CB use. But since when has that ever
>mattered to Aanyone other than Aanal Aaron?
>Who isn't a licensed Aamateur and can't use 10 metres
>Aanyhow?

Irrelevant.

>The HR2510 is perfectly legal for 10 metre use.

Wrong again. See below.

>Aanal Aaron is not legal on ANY band!

You sound like Dave & Debbie now.

-Aaron-

ILLEGAL CB TRANSCEIVER LIST

The FCC's Office of Engineer and Technology (OET) has evaluated the devices listed below and has concluded that these devices are not only amateur transceivers but can easily be altered for use as Citizens Band (CB) transceivers as well. As such, OET has further concluded that these devices cannot legally be imported or marketed within the United States for the reasons discussed below. Further, the FCC General Council has issued a decision in a specific case involving one manufacturer and has concluded that dual use CB and amateur radios of the kind at issue may not be approved under the Commission's rules and are in violation of several rules including the RF power level limits of 47 CFR 95.639. (letter from Christopher J. Wright, FCC-OGC to John F. Atwood, US Customs Service, dated May 17, 1999).

Transceivers used in the Amateur Radio Service below 30 MHz do not require FCC authorization prior to being imported into or marketed within the United States, but transceivers for other services, including the CB Radio Service (CB), do require Commission approval. The transceivers listed herein and other similar models operate in the amateur "10-meter band" and are often referred to as "10-meter" radios or "export" radios. The amateur 10-meter band uses frequencies that are very close to the channels set aside for use in the CB service.

Some of the transceivers that manufacturers call "10-meter" radios either operate on CB frequencies as manufactured and imported or are designed such that internal circuits can readily be activated by a user, a service technician or a dealer to operate on CB frequencies. According to Section 95.603(c) of the Commission's rules, a CB transmitter is a transmitter that operates or is intended to operate at a station authorized for the CB service. 47C.F.R. ï¿½ 95.603(c). The Commission's equipment authorization experts in the FCC Laboratory have determined that the transceivers listed herein and other similar models at issue here are intended for use on the CB frequencies as well as those in the amateur service because they have built-in capability to operate on CB frequencies. This capability can be readily activated by moving or removing a jumper plug, cutting or splicing a wire, plugging in a connector, or other simple means. Thus, all the transceivers listed herein and similar models fall within the definition of a CB transmitter. See 47C.F.R. ï¿½ 95.603(c). A CB transmitter must be certificated by the FCC prior to marketing or importation. 47 C.F.R. ï¿½ï¿½ 95.603(c); 2.803.

Moreover, the dual use CB and amateur radios of the kind at issue here may not be certified under the Commission's rules. Section 95.655(a) states: "ï¿½.([CB] Transmitters with frequency capability for the Amateur Radio Services ï¿½ will not be certificated.)" See also Amendment of Part 95, Subpart E, Technical Regulations in the Personal Radio Services Rules, FCC 88-256, 1888 WL 488084 (August 17, 1988). This clarification was added to explicitly foreclose the possibility of certification of dual use CB and amateur radios, see id, and thereby deter use by CB operators of frequencies allocated for amateur radio use.

In addition, the Commission's equipment authorization experts have determined that these devices violate or appear to violate a number of the rules governing CB devices. For example, they may use emission types not permitted, or emit RF power at a level in excess of the levels permitted in the CB radio service. See 47 C.F.R. ï¿½ 95.639.

In view of the foregoing, the following "10-meter" transceivers are not acceptable for importation or marketing into/within the United States. Importation and marketing of these units is illegal pursuant to Section 302(b) of the Communications Act and Section 2.803 of the rules. Willful violations of the Rules and the Act may subject the violator to a monetary forfeiture of not more than $11,000 for each violation or each day of a continuing violation. The Commission continues to review this type of equipment, and additional makes and models may be added to this list in the future.

LIST OF TRANSCEIVERS
ILLEGAL TO IMPORT OR MARKET

GALAXY - models: DX33HML, DX 44V, DX55V, DX66V, DX 73V, DX 77HML, DX 88HL, DX99V and Saturn Turbo

CONNEX - models: 3300, 3300HP-ZX, 3300 PLUS and CX-3800

MIRAGE - models: 44, Galaxy 88, 9900 and 2950EX

NORTH STAR - models: NS-3000 and NS-9000

PRESIDENT - models: Grant, J.F.K., Jackson and Lincoln

PRO STAR - model: 240

RANGER - models: AR-3500 and RCI-2950

TEK - model: HR-3950

UNIDEN - models: HR-2510 and HR-2600

SUPER STAR - model: 121

For further information concerning the listed transceivers or similar models, contact Ray LaForge or Gary Hendrickson at the FCC Laboratory, 7435 Oakland Mills Road, Columbia, MD 21046, (301) 362-3041 or (301) 362-3043 respectively, or E-mail: rlaforge@fcc.gov and ghendric@fcc.gov

Aaron, about the Ranger model RCI-2950 ... isn't that pictured in the ad on page 128 of the August 2002 QST?

73 from Rochester, NY
Jim
ps - somewhere I saw a post that the ARRL only advertises those radios that are not easily modified for out of amateur band use.

Zeek

Now it is my turn to tell you more than you really want to know.

You apparently inherited or bought a dual antenna system which uses 72-ohm coax (the characteristic impedence of RG-59) to pull a little cute to match the 50-ohm load expected by a CB and most other transmitters. It is called a Q-section and is a staple on the ham bands. This is really not the place to go into it but I will if you want.

SWR (Standing Wave Ratio) is basically a measurement of the amount of the transmitter output that is accepted by the antenna, actually usually by measuring the amount 'reflected' back to the transmitter. It is certainly of interest but an issue over which an almost religious fetishism has developed in CB circles for no particularly good reason.

There are in fact two components that determine SWR. The first is the match between the transmitter, feed line, and antenna. Give yourself a big cigar for having the good sense to do the measurement at the antenna although with duals it can potentially be misleading in this area. But this is not the real problem.

The second is resonance, the frequency to which the antenna is tuned and it is here where the problem can get cute. It is apparent that for some reason, your antennas are short. Now they can be short because of the length of the stinger portion, the proximity to another radiating antenna, or more likely the counterpoise - the 'ground' if you will. Did these come off a big rig with larger mirrors??

Keep the two components of the SWR separated and you will eventually blunder your way to success; no matter what the technical smugitude, that is how most of us get it done.

I would agree, BTW, with the proponents of single antennas however uncool they may be. But for these, the coax is RG-58, the 50-ohm version. Given that your antennas would more than likely explode when fed power there is no good reason for using anything bigger.

Dick N&#65533;BK

Aaron, there also exists the possibility that the radio offered is, indeed, a new model and is acceptable. I re-read the ad and it is for the Ranger RCI-2950DX. Note the 'DX' added at the end of the model number. Perhaps it has been reworked so it is legal now?

Their ad kind of alludes to that. The extensive shielding and improved stability may well include a bit of sheet metal over the PLL pins. Given the legendary quality of their soldering in the PLL area this might not be the best idea in the last 50 years but it does help keep the receiver from interfering with itself.

Speaking of which I wonder if the redesigned front end has a 3rd order intercept that is any improvement over the average pre-war Zenith.

It is not too hard to see what is happening here and to some extent I wish them luck. China has built the world's commodity electronics for some years and is trying to 'get couthy' in the higher end of things. This is very similar to what Toyota and Nissan did 40 years ago with autos; not too many remember the Datsun Bluebird and Toyota Toyopet Tiara Mark II with very good reason in both cases.

So I wish them luck but I am not sure I want to participate in the beta test.

Breaker ;-)

Been a while since I was on the CB. About 8 years ago in Liverpool, UK in fact. Still have my Rotel 240 sat in the closet in pristine condition too!

Anyway, I acquired a TRC430 from a garage sale. Looks almost new. I opened it up to see if the output had been turned up, but it's still stock. I can't remember which one it is I need to fiddle with to turn up the wattage. Can anyone help me?

Thanks!
Aqualung

Well, as far a poor reliability goes, it is hard to beat (or at least back in the 60s - early 70s) British Leyland Motors. My dad had a Rover TC-2000 back around 1966. He finally went to dump the thing (everything kept breaking, you kept your eye on the instrument gauges as snap on clips on your radiator hoses would unsnap at any instant). A friend of his really wanted it. My father didn't want to sell it to him as he was a friend. His friend insisted, so my dad showed him the receipt for 4 new tires and sold the car to his friend for the cost of the tires. His friend was elated. For about a week. One trip from Rochester to Ashland, Ohio (picking up a girl friend going to college there) netted one popped off radiator hose (those stupid clips) and a differential that completely died. The shop said there was no oil in it. Likely leaked out on the trip. Sigh ...

73 from Rochester, NY
Jim
ps - another friend had an MG-B. That thing was as reliable as the Rover. BTW, the Rover was rated the safest car that year. Yeah, it's hard to get hurt in an automobile that spends 11 months of the year in the shop!

In my college days I made a few centavos rewiring MG-A dashboards that caught fire when the grommet on the add-on American license plate holder wore out and shorted the light wire to the body.

You could steal one with 8 inches of wire. Seems there were 2 30-amp fuses in the whole system, one for that which worked on the key and one for that which did not. So you popped the cover, wound the wire around the fuse terminals, pulled the mechanical starter, and drove away.

As was said of the Britmobiles of the era, 'There will always be an England; when they turn off the key, the engine will run on and on and on.'

I wouldn't buy ANYTHING from an LA store. 8.5% sales tax??!! No, thanks.

Use the store to locate and test the items you want. Then, order via Internet
from out-of-state. You'll save some cash, plus the politicians will have a few
bucks less to waste on their welfare programs.

TRC-430

Modulation: RV104
RF Power Output: L306/L307
RF Meter adjustment: RV106
Receive Meter adjustment: RV next to C132
Squelch Adjustment RV next to Q208
Frequency alignment: CT201 (not recommended)

>* While undoubtedly there are more precise ways to measure these waveforms
>there are few that are more easily and quickly employed.

But with less than spectacular results. The accuracy just isn't there.
And it can't be as easy as plugging a demod probe into a voltmeter.

>compressed waveform.

Most beginners can't tell a sine wave from a rounded trangle wave from
a filtered square wave. Even most experienced technicians usually
can't tell if a sine is marginally compressed just by looking at it.
And unless you are familiar with the scope and the frequency response
of the probe, you might just be looking at a 27 MHz square wave and
think it's a perfectly good sine wave.

>_____________________________
>> You can observe a basic symmetry, but unless you
>> hold up a stencil to the screen you can't say for sure just how

>think of one radio that doesn't band limit or otherwise introduce some group
>delay in it's modulation section. You can see all the symmetry you need if
>you know how to interpret the scopes representation.

There is symmetry of opposite-sign quadrants (top to bottom) and of
same-sign quadrants (left to right) of the sine. The fact is that the
mind plays funny games with shapes and lines. Ever see those brain
teasers where they ask you which line is longer? then you find out
that even though one line looks longer they are both the same length?
When absolute measurements are required, you can't trust your eyes to
give you absolute measurements from non-specific shapes. And I'm
absolutely certain that if you were to look at what appears to be the
bottom half of a sine wave you couldn't tell if it was created by a
function of a sine, a parabola or an ellipse; not unless you had an
example to compare it against. And even then it might be tough because
at certain levels of amplitude they all appear very similar.

>_______________________________
>> You can't determine linearity just by looking at a
>> modulated RF waveform.
>
>* To an acceptable degree you most certainly can.

You need to vary the input and compare with the output. You would need
to run dual-trace on the RF input and the output, and then superimpose
one upon the other. But then you won't be able to define the line
between acceptable and non-acceptable linearity. Your dual-trace setup
is complicated further if you are watching SSB... yikes!

> Ever since scopes came
>out, hams and broadcaster's have relied upon what they are seeing as a
>suitable guide for linearity. Remember, your trapezoid patterns are on a
>scope as well.

Yes they are. And a modulation scope is a neat device to have around
for general use. Too bad more hams don't use one. Most keyclowns would
avoid them. But when linearity is an issue, even a modulation scope
can't replace a proper point-by-point plot. If linearity isn't
critical it can be done with a scope or any other means available, but
it doesn't require a scope.

>_______________________________
>> You can't see audio distortion that may be
>> caused by the final.

>introduce artifacts into the viewed waveform if you're paying attention.
>While not the very best way to monitor these errors, the scope still remains

>usefull in quickly determining the prescence of undue amounts of each.

As I said before, RF compression (i.e, "flatopping") can happen to some degree and not be noticed (unless you have a sine-wave stencil to hold up to the screen).

Intermodulation distortion (i.e, "splatter") is easily heard on the monitor and seen on the audio distortion analyzer.

You can see harmonics to a certain point on a scope, but if your signal is much larger than the harmonics, or if the harmonics are much higher than the 5th or 6th harmonic, then you won't see squat while looking at the fundamental. The only way to verify the existance of harmonics is with a spectrum analyzer. But if the LP filter is properly tuned and everything else is working according to specs, that shouldn't even be an issue.

Crossover distortion results in a harmonic content all it's own, and can be very high in frequency if the crossover is hard or very short. You might be able to see a very narrow spike, but the chances are that it will be filtered out by the probe capacitance. Even then, unless you are running some power, it won't make a lick of difference past the LP filter.

>_____
>> You can't see symmetry of the audio component in
>> an RF envelope because the ground is for the RF, not the audio.
>
>* I'm not really sure what you're getting at here. What has the ground got
>to do with it? Just demodulate the audio with a good probe and viola' you
>have an excellent view of whatever symmetry you're looking for.

Any output should be DC isolated coming out of the radio. If that cap shorts, or for some other reason there is DC on the line, one might think that the RF is asymmetrical. Or if there is DC on the line and you leave the scope in AC mode, then you will probably spend many futile hours trying to tune the final because you didn't think to look for that loose sliver of metal left over from assembly that is mucking up the works (had an example of that just last week).

>_____
>> You can't tune a final with a scope because you will only be peaking the

>
>*Wouldn't the voltage and current also be hand in hand with the impedance?
>Keep an eye on the scope and a current meter and you'll be very close when
>tuning for conjugate match at whatever power level you deem important.

Yes, but you are forgetting about frequency response of the filter. That's why the filter is there, not to create a conjugate match with the load. Regardless, no matter what you use on the output you still

need the sig-gen on the input. And why bother with a scope and current
meter (or even watching the current on a second trace) when all you
need is an RF voltmeter? Seems like a hassle to me.

>than a scope.

I explained how to set the limiters in another post. All you need is a
wattmeter (or RF voltmeter and dummy load) and a noise source such as
an audio signal generator. You can buy an old Heathkit audio sig-gen
for about $10-20 on ebay, and you probably already have a wattmeter. I
think a scope would cost a bit more than that.

>near full output?

Not what I'm saying at all. What I -am- saying is that you don't need
to tweak the carb and twist the distributor while sitting in the
engine compartment at 50 mph, you can use a vaccuum guage and a timing
light. These devices were invented because it is either too expensive
or too impractical for the average Joe to make the adjustments any
other way. For example, do you use your scope as a wattmeter or do you
just use a wattmeter? Do you use your scope to check the voltage of a
battery or do you use a voltmeter? Most of the equipment I have
described is much smaller, much less inexpensive, and much easier to
use than an oscilliscope. The two possible exceptions (disregarding
any tube-type equipment) would be the spectrum analyzer and maybe the
audio distortion analyzer. But the rest you can build in your own shop
from junk-box parts, or even from a kit!

Come to think of it, an audio distortion analyzer isn't that difficult
either, it's just an analog comparator. Mine was kind of expensive,
though, but I do a lot of work on professional audio equipment so the
cost was justified.

>_____
>> SSB is easier to adjust than AM. The final is class AB, so bias isn't

>
>* And you would trust your ears listening to a monitor for something before
>you trust your eyes on a scope? Your ears must be pretty good then. I think
>it's a safe bet that a scope will show the distortion well before your ears
>and monitor will.

Not usually. Many times you will hear what you can't see on a scope.
For example, I can hear IMD before I can see it on a scope, but I -do-
need a distortion analyzer to determine the amount of any distortion
that I can't hear. Using your logic, we would all be tuning our BFO's
and adjusting our tone controls with an oscilliscope!

>_____
>> The ALC, if the radio has

Yes, a distortion analyzer. A scope won't see it if you can't hear it.

>
>* The scope may not be the perfect device for checking linearity of an amp
>but it sure is a fast and reasonably accurate way of seeing if there is a
>problem requiring further investigation with more precise instruments.

I agree that a dedicated modulation scope is a much better choice than
a modulation meter. But if there is a linearity problem worth further
scrutiny you will know it long before you hook up the scope. Amps
don't just go a 'little' off-linear; if it changes from specs it will
do so in a very obvious manner!

>
>* Isn't your trap test viewed on a scope?

Yes it is. I didn't say a scope is not useful, I said it is not
required for a routine CB repair shop.

> And no, your wattmeter will not
>give you a better representation than the scope will.

You pump in 1 watt and out comes 10. Put in 2 watts and out comes 20.
Put in 3 watts and out comes 30. That's linear. The accuracy depends
on the accuracy and measurable gradient of the wattmeter. An RF
voltmeter (with a dummy load, of course) would be even better! And
certainly more accurate than a scope. If you wanted to get that kind
of accuracy from a scope you would need to constantly switch ranges
and shift the vertical position. And that's still not as accurate, nor
as easy, as reading four digits from a $10 meter and an RF probe that
you built with the other half of that $20 bill.

>_____________________________________
>
>> You can even use that method to quantify the linearity by plotting the

>
>* Not capable? First off, the test you describe is not really one of
>linearity as it is a test of gain and P1db. Linearity in my terms means a
>waveform lacking artifacts not found in the original driving signal.

Look up the definition of 'linear'. It means like I described above:
any input level is amplified to a proportional output level. It is, as
you said, a measure of gain, but not just gain: it is a measure of
gain through the entire range of the input, and that gain shouldn't
change from min to max, or to any point inbetween. It's called

'linear' because when you graph the input vs. the output (like I described before) you have a straight 'line'. If you want to operate a transistor or tube in the 'linear' region you must bias it so the signal lands on the straightest, most 'linear' part of the transconductance curve.

>Secondly, a dual trace scope will easily provide a more precise
>representation of the input/output ratio especially if it has a dvm and math
>functions built in.

Holy cow! Why not just buy a spectrum analyzer? And you still need a varible signal source for the input. Why use a dual-trace scope with "dvm and math functions built in" when all you need is an RF voltmeter, a piece of paper and a pencil? Maybe we are getting to the root of this recent increase in dependence upon high-technology...

>> Motorboating,
>* Why can't you see a low freq. tone impressed on a faster
>waveform?

You can if you switch down the time scale so you are not triggering faster than the low-frequency disturbance, then increase the voltage scale and shift up or down to a peak. Do you do that as a regular practice?

>> RF compression,
> *As I said, I may not be understanding of your term here.
>You can see, on a scope, when youre reaching the P1db point.

You can measure it on an audio distortion analyzer, and sometimes even hear it, long before you can see it on a scope.

>> class AB2 distortion,
> * You'll see the crossover distortion on a scope
>easily enough. It may not be as precise as say a audio distortion meter or a
>spectrum analyzer but you'll see it before it reaches undue levels.

I am assuming, of course, that you are talking about a push-pull amplifier, which is not usually found in the final of a CB, but commonly found in external power amplifiers, devices where the voltages should be checked on all the leads of all power components as

a normal service procedure. In that case, crossover distortion can be very important because LP filters are rarely found inside (or outside) of those types of amplifiers. But you will also find that most of those amplifiers are not properly biased in the first place, which makes the whole crossover distortion issue moot.

But like I said before, if everything else is working according to specs (meaning the final works and the bias is set correctly), then crossover distortion won't be a problem. And since it should be regular practice to check the bias on the final, why bother with the scope? Not only that, but crossover distortion will appear as distortion in the audio of the received signal, so a distortion analyzer will see it as well, probably before you see it on the scope.

>> asymmetrical modulation,
> * This is easy to spot on a scope.

Not always. It depends on the severity, and the accuracy of your sine-wave stencil.

>> and even some high-freq harmonic content won't be visible
> * depends on the
>scope and you'd need to define hi freq. As I said the scope isn't a
>replacement for a spectrum analyzer but with a decent scope you'll spot most
>errors produced by appreciable levels of harmonics. It will provide you with
>a reason to suspect there are hi levels of harmoinc energy at the very
>least.

With an audio distortion analyzer you can spot -any- distortion in the received signal. All you need to do is hook it up to the modulation input to determine if the distortion is AF or RF. It's also cheaper and easier to operate.

>preference and defined moreso by the DUT's characteristics. Taken a step
>further, why was the scope even developed in the first place and before all
>the fancier gadgetry?

I think you missed something here. The 'gadgetry' I use is far from fancy. It is basic equipment that every tech should know how to use and why. Most of my 'gadgets' are very simple circuits. Did you forget the lesson on bridges? It, and all it's variations, are VERY accurate

circuits for making measurements that even digital multimeters can't make. Like measuring resistances down to milliohms (try that with your super-duper O-scope), as well as inductive and capacitive reactance. With a homebrew impedance bridge you can measure reactances at frequencies into the UHF, and all you need is about a dozen common components and a meter. You can build a demod probe with a 1N34, a small cap and a couple resistors, and then you can measure RF all the way into the microwave spectrum. Add a few more components to that demod probe and you can measure those microwaves down to a few millivolts, and even much lower if you use a bridge to match the diodes. And like I said before, an audio distortion analyzer is nothing more than an analog comparator -- another type of bridge circuit. A sig-gen is just an oscillator adjustable for frequency and amplitude, certainly nothing to write home about. A GDO is an oscillator with plug-in coils for different frequency ranges. These are all very simple circuits, and they can be built by a tech with only moderate experience (even less experience is required these days because of chips like the MAX038). Some home-built equipment can be made more accurate (for what they are intended to measure) than any top-of-the-line oscilliscope.

> Ive never postulated it was the end all-be all of test
>devices. I simply stand up to say don't discount it as a usefull first line

>_____

It is the oscilliscope that is the 'elaborate' device. The others are practical examples of rudimentary electronics.

> F. Atwood, US Customs Service, dated May 17, 1999).

All that says is that they can no longer be imported or marketed NEW.
Like the old cellular-restorable scanners. Sales of existing ones is
NOT illegal, Aanal Aaron. You can still get PRO2006 scanners if you
want to. You just can't import them anymore.

They CAN still be bought and sold.

And anyone who thinks it "easy" to chop up a perfectly good radio to
mod it for 11m is a sap. I'm a tech and I still cringe whenever I do
something like that.

Besides that, the HR2600 is impossible to mod for 11m without a CPU
transplant. Same with the later HR2510s. That is NOT easy. Period.

Too bad you don't know what you're talking about. Get a life!

It's not the fault of the instrument if the operator cannot interpret
the results.

That's why you use a dual trace scope. On one trace, your modulated RF, the other trace is the raw audio. If you superimpose the raw audio over the RF envelope, the symmetry should be the same, and it will be very obvious when it isn't.

>
> >_______________________________

> is complicated further if you are watching SSB... yikes!

Linearity is not that precise, that you have to measure to the level that you're implying. A well designed amplifier is linear until it reaches its compression point. At that point it should be obvious. A dual trace can help you compare and establish that point, and tune accordingly.

>
> > Ever since scopes came

> it doesn't require a scope.

You make the case that running a dual trace scope, looking at the input and output is cumbersome, yet the alternative (a point by point plot) seems even more tedious. I agree that if you are looking to plot the characteristics of a particular amp, point by point plotting would be the best way to quantify it. But for a quick tune up or to establish the point of compression, a scope is far easier, and quicker. And for most

shop guys, time is money.

A good audio distortion analyzer costs as much as a scope. It's one
thing to use the best tool for each particular job, but if cost is a
factor (and it usually is), and you have to limit your test equipment to
that which is the most versatile, then which would you choose? A scope
can do a multitude of jobs. It might not be the most accurate way to
measure distortion, or linearity, or power. But it can do all of them to
some degree. So from a value standpoint, a scope is a fairly cheap
investment.

a scope *IS* an RF voltmeter! The added bonus is that you can 'see' the
waveform, not just the indicated magnitude of it.

How do you accurately set a modulation limiter with a wattmeter? Surely
you don't trust peak reading meters? And those peak reading meter cannot
tell you whether the modulation symmetry is unbalanced and consequently
whether the trough is clipping while you still have room to go on the
peak.

Actually, I had a van once that I could make distributer adjustments
while driving under load. It was fantastic to see just how well you can
make the engine run under those conditions, without the trial and error
methods of setting, testing, resetting etc. Most of the time, the
factory specs do not reflect the max potential of the engine, but take
into account many other factors. By being able to tune as I went, I was
able to find the "sweet spot".

> These devices were invented because it is either too expensive
> or too impractical for the average Joe to make the adjustments any
> other way. For example, do you use your scope as a wattmeter or do you
> just use a wattmeter?

I use both. The wattmeter gives me the accurate answer, while the scope
allows me to 'see' the components that make up the signal. I would never
look at the output of any radio without running it though the meter,
scope and spectrum analyzer (they're all in line), so I can see the
state of health of the radio. Those three instruments tell me 98% of
anything I'd need to know. The rest is not important enough to care
about.

> Do you use your scope to check the voltage of a
> battery or do you use a voltmeter? Most of the equipment I have
> described is much smaller, much less inexpensive, and much easier to

True, so why not have both? That way you use the best tool for the job.

> The two possible exceptions (disregarding
> any tube-type equipment) would be the spectrum analyzer and maybe the
> audio distortion analyzer. But the rest you can build in your own shop
> from junk-box parts, or even from a kit!

If you have limited funds and you had a choice between buying a scope or
a distortion analyzer, which would you buy? Keeping in mind the fact
that a distrotion analyzer is only useful for one thing, while a scope
can do a multitude of measurements. If absolute accuracy is not
required, it's really a no-brainer.

>

Well you could. Run the one frequency into the vertical input, and the
other frequency into the horizontal, and tune for a circle pattern ;)

>
> Yes, a distortion analyzer. A scope won't see it if you can't hear it.

Yes it will. The human ear is very forgiving of distortion. Why do you
think so many "keyclowns" live with their overly distorted radios, and
then claim that they sound good?
A scope can see the modulation clip or flattop long before it is audibly
apparent. By the time you can hear it, you're already splattering badly.

But until you put the monitor on it, you will not be ablew to determine
the extent of the distortion, and whether is is distorting due to non
linearity, instability, or some other factor.

> required for a routine CB repair shop.

Hmmm.... I'd say that a scope is the next piece of equipment after an RF
signal generator.
My list of equipment in order of relative importance is:

A good soldering station
VOM
DVM
Wattmeter
Frequency counter
Signal generator
Scope
Spectrum analyzer
Distortion analyzer
Noise source

>
> > And no, your wattmeter will not
> >give you a better representation than the scope will.
>
> You pump in 1 watt and out comes 10. Put in 2 watts and out comes 20.
> Put in 3 watts and out comes 30. That's linear. The accuracy depends
> on the accuracy and measurable gradient of the wattmeter. An RF
> voltmeter (with a dummy load, of course) would be even better! And
> certainly more accurate than a scope.

How do you figure? A scope IS an RF voltmeter. Assuming that it's kept
calibrated, it can make very accurate voltage mesurements.

> If you wanted to get that kind
> of accuracy from a scope you would need to constantly switch ranges
> and shift the vertical position. And that's still not as accurate, nor
> as easy, as reading four digits from a $10 meter and an RF probe that
> you built with the other half of that $20 bill.

How accurate do you think a $10 meter is going to be? Don't confuse
accuracy with precision. A digital meter can give you a very precise
reading, but its accuracy is only as good as its design. And a $10 meter
is not going to be as accurate as a $400 meter or a comparible scope.

>
> >_____

> voltmeter, a piece of paper and a pencil? Maybe we are getting to the
> root of this recent increase in dependence upon high-technology...

Back to that Time=Money equation again. It takes a lot of time to
manually plot the linearity of an amp using your method. A scope can
give you an instant snapshot of what you are looking at. It may not be
as precise, but it is, as they say, "good enough for government work".
Remember, we're talking about CB radios here, not high end audio
components.

>

Sure, don't you? I switch time bases and voltage scales all the time.
That's called using your instrument to its fullest capability.

>
> >> RF compression,
> > *As I said, I may not be understanding of your term here.
> >You can see, on a scope, when youre reaching the P1db point.
>
> You can measure it on an audio distortion analyzer, and sometimes even
> hear it, long before you can see it on a scope.

But if you can't afford an audio distortion analyzer, the scope is
better than your ear.

> >> asymmetrical modulation,
> > * This is easy to spot on a scope.
>
> Not always. It depends on the severity, and the accuracy of your
> sine-wave stencil.

It's becoming apparent that you either don't utilize a scope
effectively, or you have one that is woefully out of date. Most modern
dual trace scopes make short work of determinning symmetry.

> >> and even some high-freq harmonic content won't be visible
> > * depends on the

>
> With an audio distortion analyzer you can spot -any- distortion in the
> received signal. All you need to do is hook it up to the modulation
> input to determine if the distortion is AF or RF. It's also cheaper
> and easier to operate.

A good distortion analyzer (like the H.P. unit I have at work) costs
many times what a decent scope costs. If you can afford a D.A., you can
afford a scope too.

I really don't want this to devolve into a pissing contest (The
keyclowns do that for us). The bottom line is that each tech uses what
he/she feels most comfortable with. But if you are a beginner, on a low
budget, a scope would be something to consider long before the more
fancy equipment such as a spectrum analyzer or distortion analyzer. Its
versatility is fairly obvious to those that take the time to understand
what its capabilities are. A scope can greatly enhance your ability to
see what is going on inside a radio.

This beam can be used on 11 meters "CB" as well! I have for sale 1 full size "HY-Gain" beam 10 meters. fully assembled
for your inspection. 13' Boom and longest element is 22' $100.00 I also have a steel tower totaling 25'. this is in 3 sections 1 10 foot st8 and 1 5foot st8 and 1 10 foot top section. I don't not have a rotator. $50.00. pickup only from Nashua,NewHampshire. I am selling these because they are to big for my new QTH. This beam has spent a large portion of its life in storage. 73's Jeff AA1GR

Before the Federal Communications Commission
Washington, D. C. 20554

In the Matter of) File No.: EB- 01- TP- 399)
Joseph S. McCreary) NAL/ Acct. No. 200232700006)
Pensacola, Florida) FRN 0006- 9319- 84

FORFEITURE ORDER
Adopted: July 29, 2002 Released: August 1, 2002
By the Chief, Enforcement Bureau:
1. In this Forfeiture Order (" Order"), we issue a monetary forfeiture in the amount of five thousand dollars ($ 5, 000) to Joseph S. McCreary for willful violation of Section 95. 411 of the
Commission's Rules (" the Rules"). 1 The noted violation involves Mr. McCreary's usage of an external radio frequency power amplifier as part of his Citizens Band Radio station.

2. On May 7, 2002, the District Director of the Commission's Tampa, Florida Field Office issued a Notice of Apparent Liability for Forfeiture (" NAL") 2 in the amount of $5,000 to Mr. McCreary.
Mr. McCreary has not filed a response to the NAL. Based on the information before us, we affirm the forfeiture.

3. ACCORDINGLY, IT IS ORDERED THAT, pursuant to Section 503(b) of the Communications Act of 1934, as amended (" the Act"), 3 and Sections 0.111, 0.311 and 1.80(f)(4) of the
Rules, 4 Mr. McCreary IS LIABLE FOR A MONETARY FORFEITURE in the amount of $5,000 for willfully violating Section 95.411 of the Rules.

4. Payment of the forfeiture shall be made in the manner provided for in Section 1. 80 of the Rules 5 within 30 days of the release of this Order. If the forfeiture is not paid within the period specified,
the case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act. 6 Payment shall be made by mailing a check or similar instrument, payable to the order of the
"Federal Communications Commission," to the Federal Communications Commission, P. O. Box 73482, Chicago, Illinois 60673- 7482. The

payment should note NAL/ Acct. No. 200232700006, and FRN 0006-

1 47 C. F. R. § 95.411.
2 Notice of Apparent Liability for Forfeiture, NAL/ Acct. No.
200232700006 (Enf. Bur., Tampa Field Office,
released May 7, 2002).

3 47 U. S. C. § 503(b).

4 47 C. F. R. §§ 0. 111, 0.311, 1.80(f)(4).
5 47 C. F. R. § 1.80.
6 47 U. S. C. § 504(a).
1
Federal Communications Commission DA 02- 1834
2
9319- 84. Requests for full payment under an installment plan
should be sent to: Chief, Revenue and Receivables Operations Group,
445 12th Street, S. W., Washington, D. C. 20554. 7
5. IT IS FURTHER ORDERED THAT this Order shall be sent by
regular mail and by certified mail, return receipt requested, to
Joseph S. McCreary, 3305 Bayou Boulevard, Pensacola,
Florida 32503.
FEDERAL COMMUNICATIONS COMMISSION

David H. Solomon Chief, Enforcement Bureau

7 See 47 C. F. R. § 1.1914.

As do I with 98SE. And the more security "hole" they patch, the more
the hackers find to exploit.

> >BTW, Win98SE is a perfectly stable system, too; IF you know what
> >you're doing.
> >

Excuse me? I made no attempt (feable/feeble or otherwise) to "slam
you". I simply made a statement. A little touchy, aren't we?

I can't guess why your K6-300 Blue-screened so much (insufficient
ventilation is the first guess - those things run very hot), but
almost any OS from Win98 on up can be quite stable if it's set up
correctly. I can't remember the last time any of my computers (all
running 98SE) gave me the BSOD.

> >And I bet you left your modem connected to the phone line (causing the

Amateur Radio Newsline™ Report 1303 August 2nd, 2002

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. Free FTP Downloads are available at our site by clicking on the newscast number at the top of the website front page.

de
The Newsline Production Team

==========

Amateur Radio Newsline report number 1303 with a release date of Friday, August 2nd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio may be headed to Mars. That’s right. We said the red planet Mars! Find out how on Amateur Radio Newsline report number 1303 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: WE ARE GOING TO MARS

Ham radio could be headed to the Red Planet in a few years. This as the German ham radio space agency announces some ambitious plans for future Amateur Radio operations from outside the Earth’s atmosphere. CQ Magazine Editor Rich Moseson, W2VU has the details:

--

AMSAT-DL the German amateur radio satellite organization has announced plans to build two new amateur spacecraft, including one destined for orbit around Mars! Now, the AMSAT News Service, says that the so-called Phase 5-A satellite could be launched in the 2007 to 2009 timeframe and that it will include subpayloads that would be launched from the main satellite,

either to the planet's surface or into the Martian atmosphere.

These devices would transmit scientific data back to the "mother ship." It would then use a repeater to relay the information back to hams on Earth. AMSAT-DL officials say that the 2000 launch of AMSAT-OSCAR 40 showed that the basic satellite design was capable of a trip to Mars.

The AMSAT-DL board of directors has also given a green light to developing a Phase 3-E earth-orbiting satellite. This would be a more traditional amateur bird, offering two-way communication links on amateur bands between 145 MHz and 10 GHz. In addition, it will serve as a testbed for some of the technology needed for the Mars mission.

AMSAT-DL has been the lead AMSAT group on the past three large amateur satellites placed into orbit. This includes AMSAT-OSCAR-10 which is still operating, AMSAT-OSCAR-13 which is no longer in orbit and AMSAT-OSCAR-40.

For the Amateur Radio Newsline, I’m Rich Moseson, W2VU.

--

No launch timetable has been announced for Phase 3 E, but it is expected to be several years before the anticipated launch of the mission to Mars.

information about both missions can be found at:
http://www.amsat-dl.org/p3e/towards-p3e.pdf and
http://www.amsat-dl.org/p5a/p5a-to-mars.pdf (ANS, CQ)

**

RESCUE RADIO: JULY 4th WATER RESCUE ACCOMPLISHED THROUGH HAM RADIO

Its ham radio to the rescue on Thursday, July 4th. This following a water accident involving a teenage girl on Utah’s Lake Powell. Roy Neal, K6DUE has the details:

--

STEVE WILLIAMS, K0SRW, REPORTS THAT A TEENAGER . WHO SHALL HERE GO UNNAMED BECAUSE OF HER AGE, WAS RIDING A TUBE BEHIND A RENTED SKI BOAT. THEY WERE GOING FAST UNTIL SHE HIT A WAVE AND SUDDENLY…UNEXPECTEDLY…WENT AIRBORNE. THAT’S USUALLY LOTS OF FUN FOR KIDS BUT THIS TIME THE YOUNG GIRL LANDED THE WRONG WAY. HER NECK HURT. SHE COULD HARDLY MOVE HER NECK AND BACK.

WILLIAMS WANTED TO CALL FOR HELP BUT THE ACCIDENT TOOK PLACE ON LAKE POWELL, WHICH IS A HUGE PLACE…186 MILES LONG WITH ALMOST 2 THOUSAND MILES OF SHORELINE. MAJOR CANYONS, 96 OF THEM, SOME 15 TO 20 MILES LONG, RISE UP BEHIND THE SHORE.

A MARINE RADIO CAME WITH THE HOUSEBOAT THAT WILLIAMS RENTED BUT THEY WERE TOO FAR OUT TO MAKE CONTACT. CELLULAR TELEPHONES ARE ALMOST NON EXISTENT IN THE TERRITORY. SO K0SRW TURNED TO HAM RADIO. WILLIAMS HAD A YAESU 900 AND OUTBACKER ANTENNA ALREADY SET UP. ON 20 METERS, HE HEARD W8VRT, LEN KERSCH, IN ANN ARBOR, MICHIGAN, SEVERAL HUNDRED MILES AWAY.

KERSCH WAS TAKING PART IN A NET, ON 14.178 Mhz. WILLIAMS BROKE IN, EXPLAINED THE SITUATION AND GAVE A PHONE NUMBER FOR THE BULLFROG MARINA, AT LAKE POWELL. KERSH CALLED THE MARINA. THEY CONNECTED HIM WITH THE NATIONAL PARK SERVICE. ANOTHER WILLIAMS…KARL WILLIAMS, KD5AW, IN OKLAHOMA CITY BROKE IN TO ASSIST BY RELAYING INFORMATION BETWEEN W8VRT AND K0SRW.

ABOUT 25 MINUTES AFTER THE INITIAL CONTACT, A MEDICAL HELICOPTER AND A NATIONAL PARK SERVICE BOAT ARRIVED. THEY DECIDED TO AIRLIFT THE GIRL BY HELICOPTER TO A HOSPITAL AT GRAND JUNCTION, COLORADO. STRANGE TO RELATE, THE PILOT ALSO WAS A HAM…TOM CALDWELL, KC7BPK, WAS AT THE CONTROLS.

THERE WAS NO ROOM FOR THE PARENTS IN THE HELICOPTER. THEY TOOK OFF TO TRAVEL SOME 4 HOURS BY BOAT AND CAR. AS THEY DROVE AND GOT BACK INTO CELL PHONE RANGE, GOOD NEWS WAS WAITING FOR THE ANXIOUS PARENTS. X-RAYS SHOWED THEIR DAUGHTER WAS NORMAL…NO PERMANENT INJURIES. THIS HAM RADIO RESCUE STORY HAD A HAPPY ENDING.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE

--

Williams says he is grateful to all of the hams who assisted in the rescue. Because of them an injured youngster quickly received medical aid in a rather remote part of the USA. (K0SRW)

**

RESCUE RADIO: HAMS READY FOR WASHINGTON TRAIN DERAILMENT

Ham radio was ready but not really needed at a July 29th train derailment just outside of Washington D-C. An AMTRAK liner was enroute from Chicago to Washington when many of the passenger cars left the track near Kensington, Maryland. About 90 people were taken to area hospitals, three reported in critical condition. One news report said that a ham radio communications team was on its way to supply assistance but with no real communications failure, their services were found to be unnecessary. The news story did not mention anyone by name or call sign. (ARNewsline™ from news reports)

**

RADIO LAW: QCWA FILES IN FAVOR OF NEW HAM BANDS BUT SOME MEMBERS SAY THEY SHOULD HAVE BEEN ASKED

The Quarter Century Wireless Association has filed in favor of the ARRL proposal to create new ham radio bands. While most members of the QCWA appear to agree with the FCC filing, there is one group that is taking the Board of Directors to task over how it was done.

Its not because they disagree with the content. Rather, calling themselves the “vocal minority,” these hams are using the QCWA electronic remailer to complain that the board did not send paper or electronic copies of the proposed filing to all members. Also, they say that the board did not individually poll the members for their opinions before writing the QCWA position and sending the paperwork to the FCC.

But outgoing QCWA President Gary Harrison, K0BC, says that the reason it was done this way is simple. It was a matter of time.

In a posting to the QCWA Reflector, Harrison says that there was a limited amount of time to file comments. He also notes that there are only about 300 QCWA members are on the groups electronic mail list. That would mean preparing a paper mailing, sending it out and waiting for members to write back.

Harrison uses QCWA election figures as an example. He says that it takes about two years to complete an election cycle and the organization receives only about 30% return of the ballot. The cost of mailing material out for this election is about $2,000.

What about the organization's magazine called the QCWA Journal? Harrison says that it takes two months to prepare and mail it from the deadline for submitting articles. And be it a paper ballot or an announcement in the Journal, the QCWA would have to allow several months to permit input from the membership. In this case waiting would mean that the QCWA could not file because the commentary cutoff date had passed. (ARNewsline™)

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Tri Town Amateur Radio Club repeater, W9VT, serving Calumet City Illinois.

(5 sec pause here)

**

CHANGING OF THE GUARD: STEVE MANSFIELD, N1MZA – S.K.

Some rather sad news to report – especially for us here at Newsline. It comes in word from the American Radio Relay League that its Legislative and Public Affairs Manager Steve Mansfield, N1MZA, has died of complications to brain cancer at age 55.

Steve Mansfield came to ARRL service in 1991 as an expert in the area of Public Relations. It did not take long for his bosses at League headquarters to realize his enormous potential as a people person. As a result, the hallowed halls of Washington D.C. soon became his beat and he spent the next eleven years as the point man between the ARRL and numerous political leaders.

ARRL President Emeritus George Wilson, W4OYI, had the opportunity to work with Mansfield. He tells Amateur Radio Newsline that he recalls one incident just before a major convention out in California. There were a lot of very controversial issues on which the League had taken considerable heat. Wilson gave Mansfield the job of searching out all issues and prepare a short "position paper" on each for W4OYI. The former ARRL president says that Mansfield did such an outstanding job that he had copies sent to all Directors and Vice Directors. The result was what

President Wilson called tons of favorable comments, and a real tribute to the dedication of N1MZA.

Mansfield was also seen at many hamfests and conventions. In most cases speaking at public relations sessions hosted either by the ARRL or by us here at Newsline. And that's really where we got to know him as a friend, a college and as an expert in the topic of relating to other people.

Steve Mansfield was first diagnosed with brain cancer in 2000 and had surgery to remove the malignancy. He was doing well until recently when he suffered a series of setbacks. He passed away on Monday July 29th. He is survived by his wife Ellyn daughters Ramona and Elizabeth and the friends he made in and out of ham radio, worldwide. (ARRL, W4OYI, ARNewsline™)

**

CHANGING OF THE GUARD: FATHER MIKE MULLEN, WB2GQW – S.K.

The Reverend Michael Mullen, WB2GQW, a past winner of the ARRL International Humanitarian Award, became a Silent Key in June. "Father Mike" was a professor and past chairman of the humanities department at St. John's University in New York. He was best known in amateur radio for his involvement with IMRA, the International Mission Radio Association. IMRA maintaines lines of communication using amateur radio for missionaries. It also inter-connects various humanitarian agencies over the air after disasters.

According to the New York Daily News, in addition to his ARRL International Humanitarian Award, Father Mike received the St. John's University Presidential Medal and was listed in the
international edition of "Who's Who in Education." He was 87 at the time
of
his death. (CQ, NY Daily News)

**

NAMES IN THE NEWS: A NEW BOOK BY N6NHG

Former computer hacker Kevin Mitnick, N6NHG, has turned author. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

Kevin Mitnick, N6NHG, Mitnick is the California ham whose license renewal application has been designated for hearing by the FCC. This, based on his conviction for hacking. And now according to news reports, he has written a soon to be released book on computer hacking and -- more important -- how to prevent being hacked.

According to the reports, Mitnick's book -- The Art of Deception -- is a novel that describes more than a dozen scenarios where hackers dupe computer network administrators into divulging passwords, encryption keys and other security details. Mitnick claims that its all fiction with any personal details having been kept out of the book which reportedly uses

fictitious names of hackers, victims and companies.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

Earlier this year the FCC designated his application to renew his Amateur licenses for a public hearing. The FCC contends that Mitnick may no longer possess the requisite requirements to remain a Commission licensee. (Published reports)

**

CONVENTIONS: HUNTSVILLE HAMFEST

Two conventions on almost opposite sides of the country are taking place the weekend of the 17th and 18th of August. In Huntsville Alabama, the Huntsville Hamfest takes place at the Von Braun Center's South Hall right across the street from the Huntsville Hilton Hotel. Since the first Huntsville Hamfest in 1981, this event has grown to the point where the Amateur Radio manufacturers and dealers consider it to be one of the seven major hamfests in the country, pulling a gate of between 5000 to 6000 every year.

We at Amateur Radio Newsline have presented our own Young Ham of the Year Award at the Huntsville Hamfest since 1993. 2002 is no exception. So please join us at 2:00 P.M. Central time on Saturday August 17th as we, our corporate underwriters Vertex Standard and CQ Magazine along with the people of Huntsville honor 17 year of Josh Abramowicz, KB3GWY as the 2002 Amateur Radio Newsline Young Ham of the Year. More information about the Huntsville Hamfest is in cyberspace at www.hamfest.org. (Huntsville Hamfest)

**

CONVENTIONS: ARRL SW DIVISION IN SAN DIEGO

And August 16th to the 18th will se the ARRL Southwestern Division show at the California Center of the Arts in Escondido. The scheduled Banquet speaker will be Riley Hollingsworth K4ZDH. Also on hand will be ARRL President Jim Haynie W5JBP, Big Project Coordinator Jerry Hill, along with Division Director Art Goddard W6XD, and Vice Director Tuck Miller NZ6T. More information is on the convention web site at http://sd2002.hamcon.net. (HAM-CON)

**

CONVENTIONS: HUNTINGTON HAMFEST

And a week earlier on August 10th, the Tri State Amateur Radio Association will host the Huntington, West Virginia Hamfest. Its at the Veterans Memorial Field House, 2590 Fifth Avenue in Huntington from 8:30 AM to 2:30 P-M. Talk in on the 146.76 repeater and V-E administered ham radio exams will also be available. For further information contact Phil Beckett by e-mail- to ab8me@hotmail.com (N8TMW)

HAMFESTS: TRW SWAP MEET FOR SEPTEMBER CANCELED

If you are planning to travel to Los Angeles this September to attend the famed TRW Swap Meet, choose some other month. This is because the giant swap-feast has been canceled because a corporate event will be held at the Space Park Facility on Saturday, September 28th.

Only September is canceled. There will be a TRW Swap Meet the last Saturday of the month in August and in October, November and December.

The TRW Swap Meet is famous and draws attendance from across the nation. For more information visit http://w6trw.com on the world wide web. (Via e-mail from TRW A.R.C.)

**

SCIENCE PAGE: THE MAGNETIC NORTH POLE IS ON THE MOVE

The Magnetic North Pole could soon abandon Canada, migrate north of Alaska and eventually wind up in Russia. So says one scientist. Amateur Radio Newsline's Bill Pasternak, WA6ITF, reports on the future of the pole.

--

The e-newsletter Science Today tells of Larry Newitt. Newitt is a researcher with the Geological Survey of Canada. And Newitt says that the magnetic pole is on the move.

The researcher says that the pole, which has steadily drifted for decades, has picked up speed in recent years. He says that at its current speed, it could exit Canadian territory as soon as 2004. And, says Newitt, if the pole follows its present course, it will pass north of Alaska and arrive in Siberia in a half century.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, Los Angeles.

--

If you are worried that you may soon have to trade in your old compass for a G-P-S to know where you are, don't. Researcher Newitt cautions that such predictions could be wrong. (Science Today)

**

INTERNATIONAL - BRAZIL: A NEW LF BAND ON ITS WAY

According to Brazilian amateur PY3CRX the Brazilian licensing authority, ANATEL, has agreed that the 135.7 to 137.8kHz band can be allocated to radio amateurs in that nation on a secondary basis. No date was mentioned for the new band's introduction but PY3CRX adds that the band is, or will be, also available in Paraguay and Uruguay as well. (GB2RS)

**

INTERNATIONAL- CANADA: VY2BP NEW RAC AD

Radio Amateurs of Canada reports that Bill Perry, VY2BP, has been appointed as an Assistant Director for the R-A-C Atlantic Region. Perry will complete the unexpired term of Fred Burke, VY2FB, who recently resigned the position because of family commitments. (RAC)

**

INTERNATIONAL EAST TIMOR: NEW CALL SIGN BLOCK ANNOUNCED

The International Telecommunications Union says that the 4WA to 4WZ prefix block will go to the United Nations Territory Administration of East Timor for as long as it exists. United Nations stations within East Timor will be assigned 4U prefixes. The official U N Club station will get 4U1ET. All other amateurs will use the 4W6 prefix. Those residing in East Timor less than one year will sign 4W6 followed by their home call. People staying beyond one year will be assigned a permanent 4W6 call. And yes, CEPT licenses are accepted. (GB2RS, Q-News)

**

DX

In D-X, the UK-lead youngsters' DXpedition to the Maldives should be on the air as 8Q7ZZ until the 11th of August. The expedition is being lead by 18-year old Mark Haynes, M0DXR. Other operators include 15-year old Robert Morgan, M0TTT, as well as young amateurs from Germany and Spain. 8Q7ZZ will be running up to three stations simultaneously, all with beam antennas and up to 400 watts power out. (RSGB)

Meantime, four French operators are in Benin and active as TY7Z, TY9F, TY4DX and TY6FB until the 14th of August. If you make contact with either operation Q-S-L as directed on the air. (QRZ DX)

**

THAT FINAL ITEM: A SPECIAL HAM RADIO PRESENTATION

And finally this week:
--
“Good afternoon to everybody here. We have a lot of Amateur Radio operators and we have a lot of guests aboard the Queen Mary. And we are here for a very short ceremony to commemorate the 23rd anniversary of W6RO.”

--

That was Bob Heil, K9EID, on Saturday, July 27th, talking to a crowd assembled in the Wireless Museum next door to the Queen Mary's radio room. A radio room that for the past 23 years has been the home of Amateur Radio Station W6RO. And to commemorate this milestone, Bob's company, Heil Sound, donated a half dozen custom made Classic series microphones adorned with the W6RO call sign to the station. These retro look microphones are very similar to the RCA studio mic's of the 1930's. Famed rock musician Joe Walsh, WB6ACU, had the honor of making the actual presentation:

--

Joe Walsh: "These Classic microphones are presented to the Queen Mary amateur Radio Station, W6RO, celebrating the 23rd year of continuous operation provided by the Associated Radio Amateurs of Long Beach California, present by Bob Heil, K9EID, and Joe Walsh, WB6ACU, on July 27, 2002. And we wish you continued success with the station and here you go."

Nate Brigtman: "Thank you very much."

--

Accepting the mics was Nate Brightman, K6OSC, who was the man who conceived the idea of a ham station on the Queen Mary. He was accompanied b the current president of the club, Ray Rittenhouse, KF6WZN. Rittenhouse has a surprise for K9EID:

--
Ray Rittenhouse: "We appreciate this very much Bob, and from our club to you is a certificate of our appreciation thanking you for those microphones we are now putting in W6RO"
--

Then it was Nate Brightman's turn. He told the crowd a bit about the operation of W-6-R-O, and what those who sit at the transmitters get as a token of appreciation for taking the time to operate:

--
Brightman here: ""Those amateurs who come by to visit W6RO aboard the Queen Mary, should they operate the station, we will mail to them a special certificate designating that they had the honor of operating W6RO aboard the Queen Mary."
--

And when it was all over Bob Heil ended the presentation with a bit of a poem:

--
Heil: Nate. Thanks for having us today. And Ray, we appreciate all of your efforts for the club. And we will be seeing you a little high, a little low. But we'll find you somewhere from W6RO. (Applause)
--

Attending the ceremony, were numerous local ham radio operators from the Los Angeles area. This included Vertex-Standard's Chip Margelli, K7JA and film maker Dave Bell W6AQ. The ARRL was represented by Los Angeles Section Manager Phineas Icenbice, W6BF. You can hear the complete presentation as

this weeks Newsline Extra. You will find it as an MP3 file on our F-T-P page only a click away at www.arnewsline.org. (ARNewsline™)

I've had prior experience doing this with Rotels, Cobras, Barracudas etc.
It's been about 8 years since I last did it - a tad rusty, you might say.
Thought I'd ask for help instead of trying and breaking it! :-)

Thanks for your help, Sir Oblivion and Scott!

Hey all,

I switched my cb off some 20 years ago. Now I want to get started again. I'm getting a new rig. I need a mobile one so I can yell for help when I get in trouble 4x4'ing, and it helps whe we drive roadbooks with the club. Maybe I'll try my hand at some dx'ing. Question : what's the ultimate in mobiles these days ? President Licoln ? something else ? Lemme know !

It is not stated anywhere that they are only prohibited from sale if
"new". You have fabricated a false loophole and you are spreading
false information. This is how "CB rumors" start.

> And anyone who thinks it "easy" to chop up a perfectly good radio to

So in your opinion the FCC is wrong, therefore the law is wrong,
therefore you won't obey it? That's a typical excuse made by the
outlaws in this NG, but it doesn't change the law. And it won't save
you from being fined or charged if/when you get caught.

>Couldn't resist this one ... just too funny.
> Jim

First, I honestly don't understand what's so "funny" about it, Jim. I mean, they're YOUR bands being abused as a result of this gear being targeted for sale to truckers and CBers. Both the band incursion problem and the manufacturing problem HAS gotten worse (i.e. "10 meter radios" featuring echo, rogerbeep, and rebel flag designs on the front panel) You may be an easygoing guy who is willing to share your bands with outlaws - but a lot of other people aren't.

Secondly, it doesn't matter if Riley himself appears on the cover of QST wearing a DAVEMADE T shirt and talking on a GALAXY 99. It will not change the law and it will not prevent violators from being fined large amounts of money. The beat goes on, and is getting stonger as we speak.

(waltz time mit oompah und kraut)

We're coming, we're coming our brave little band
On the right side of temp'rance we do take our stand
We don't use tobacco because we do think
That people who use it are likely to drink

(Chorus)
Away, Away with Rum, by gum
Rum by gum, rum by gum
Away, Away with Rum by gum
It's the song of the Temperance Union.

We never drink water - they put it in gin
And one little sip and a man starts to grin
O, can you imagine a sorrier sight
Than a man drinking water and singing all nite

Chorus

We never eat corn flakes because they have malt
And we cannot imagine a much greater fault
O, can you imagine a sight that's more droll
Than a woman at breakfast slumped over her bowl

Chorus

We never drink milkshakes 'cause they're made with malt
And one little slurp makes your brain somersault
Oh can you imagine behavior so rash
As bar top gymnastics with a frothy mustache

Chorus

We never eat fruitcake because it has rum
And one tiny bite turns a man to a bum
Oh can you imagine the pitiful plight
Of a man eating fruitcake until he gets tight

Chorus

A man who eats fruitcake lives a terrible life
He's mean to his children and beats on his wife
A man who eats fruitcake dies a terrible death
With the odor of raisins and rum on his breath

Chorus

> running 98SE) gave me the BSOD.

All my systems are Intel processors & Intel chipsets. Windows works
with Intel stuff a lot better then with other chipsets & uP's.

Never have the strange lockups like one has with AMD, VIA, Rockwell
modems, or off the wall modems or sound cards. Add to the reliability
list, USRobotics (3COM), and Sound Blaster sound cards. You are on
your own as to video cards and all the strange revisions of offending
driver software that come with them and on the Mfg.'s website.

The hardest machines to work on are the cheap ones that folks
skimped a few $$ on and used the cheapest parts available.

I've installed 4 or 5 modems in one friend's machine. I told him
for years to buy a USR external modem. He's in a high RF area from
a 50KW AM station that's been there since around 1920. The cheapy
modems last about 6 months, then start to get garbage and retrain
every 30 seconds. Got a USR internal on special at Office Depot,
and with the rebate and coupon, it cost $5. I haven't heard a peep
from him yet! I also escort friends to the computer show so they
won't get burned with cheap shit 'puters.

Question for the group:
How many 16 bit expansion slots are in an XT?
(You won't find this in your A+ study guide. That test is a joke, like a ham exam.)

The Lincoln is for sure a damn fine radio...I have one as a back-up base. For a mobile however I like having channel presets which a stock Lincoln lacks. I have a Magnum 357 in my Ranger 4X4 and it is a great talker both on SSB and AM. The 257 is the lower power brother of this radio and another fine talker.

Of course you know there are going to be a few idiots that will warn you away from the HIGHLY ILLEGAL EXPORT radios, but if you have read any previous posts in the NG I am sure you already know who the idiots are.

Subject: DOG THAT CAN'T HEAR!

My neighbor found out her dog could hardly hear so she took it to the veterinarian. He found the
problem was hair in its ears, cleaned both ears, and the dog could hear fine. The vet told the
lady if she wanted to keep this from recurring she should go to the store and get some "Nair"
hair remover and rub it in its ears once a month.

The lady bicycles down to the drug store and gets some "Nair" hair remover. At the register the
druggist tells her, "If you're going to use this under your arms, don't use deodorant for a few
days."

The lady says "I'm not using it under my arms."

The druggist says "If you're using it on your legs don't shave for a couple of days."

The lady says "I'm not using it on my legs either, and if you must know I'm using it on my schnauzer."

The druggist says "Stay off your bicycle for a week."

<nojunk_n3cvj@worldlynx.net> wrote:

<snip>
>It's not the fault of the instrument if the operator cannot interpret
>the results.

To a certain degree it is, because if the instrument isn't accurate
enough to display the differences then it's not the operator's fault.

<snip>
>That's why you use a dual trace scope. On one trace, your modulated RF,
>the other trace is the raw audio. If you superimpose the raw audio over
>the RF envelope, the symmetry should be the same, and it will be very
>obvious when it isn't.

And you can do the same thing with an audio distortion analyzer, which
is cheaper and easier to use, quicker to set up, and gives more
accurate readings. I am starting to sound like a parrot repeating
myself all the time on this issue...

<snip>
>Linearity is not that precise, that you have to measure to the level
>that you're implying. A well designed amplifier is linear until it
>reaches its compression point. At that point it should be obvious. A
>dual trace can help you compare and establish that point, and tune
>accordingly.

So can a distortion analyzer, or even an RF voltmeter, both of which
are cheaper and easier to use, more accurate, yada yada yada.

<snip>
>You make the case that running a dual trace scope, looking at the input
>and output is cumbersome, yet the alternative (a point by point plot)
>seems even more tedious.

Not much, it just takes a couple minutes. The difference is that you
have an objective, quantified result, not a subjective opinion
regarding a couple wavy lines on a screen.

> I agree that if you are looking to plot the
>characteristics of a particular amp, point by point plotting would be
>the best way to quantify it. But for a quick tune up or to establish the
>point of compression, a scope is far easier, and quicker. And for most
>shop guys, time is money.

The fastest way to determine a compression point is by the method I described but without the pencil and paper. The only difference is the instrument you put on the output -- it can either be a scope or a RF voltmeter. Which is easier? Which is cheaper? Which is more accurate? The RF voltmeter.

<snip>
>> As I said before, RF compression (i.e, "flatopping") can happen to
>> some degree and not be noticed (unless you have a sine-wave stencil to
>> hold up to the screen).
>
>Or the source audio to superimpose against it.

Which is exactly what an audio distortion analyzer does but is less expensive, more accurate, and quantifies the results.

<snip>
>A good audio distortion analyzer costs as much as a scope.

It could. I paid $400 for mine brand new, and that's only because I got all the bells and whistles. If you pay more than that then you are looking at some serious lab equipment. I have seen them on the net priced anywhere from $20 for a basic working meter to $800 for a brand new, fully-programmable HP with true RMS voltmeter and sig-gen. Heathkit offered one as a kit!

Just like an o-scope, how much you spend depends on what you want to use it for. If you are going to be testing equipment specs for industry standards or debugging a studio you would probably want the high-end equipment. Same deal with field strength meters. You can build one yourself for a few buck in brand new parts, or you can spend a couple grand on a CISPR-compatible receiver. Now if all you want to do in your shop is repair CB radios..., well, you get the idea. Or maybe you don't, since you seem to think that a high-end o-scope is necessary to service CBs.

<snip>
> It's one
>thing to use the best tool for each particular job, but if cost is a
>factor (and it usually is), and you have to limit your test equipment to
>that which is the most versatile, then which would you choose? A scope
>can do a multitude of jobs. It might not be the most accurate way to
>measure distortion, or linearity, or power. But it can do all of them to
>some degree. So from a value standpoint, a scope is a fairly cheap
>investment.

I'm repeating myself here again by saying that I would choose the way I have already chosen: a variety of equipment that is more accurate, easier to use, and the total cost is MUCH less than a good scope.

<snip>
>a scope *IS* an RF voltmeter! The added bonus is that you can 'see' the
>waveform, not just the indicated magnitude of it.

An RF voltmeter is less expensive, more accurate, and easier to use.
Them's the facts.

<snip>
>How do you accurately set a modulation limiter with a wattmeter? Surely
>you don't trust peak reading meters?

I do if I aligned the wattmeter myself. In fact, I built and
calibrated my favorite wattmeter/dummy load. I used an old VTVM meter
and a few other junk-box parts. The dummy load is twenty 1K 2-watt
carbon-comp resistors in a tin box filled with transformer wax. VSWR
is 1:1, and is good for 50 watts continuous or 200 watts intermittent.
Accuracy is 1/10 of a watt on the 10 watt range, less if you can read
between the marks. Later I added a peak-and-hold function. It's what I
used for several years working on commercial radios, and it still
works fine. The whole thing cost me about $10. And the time and labor
was offset by the learning experience. Much cheaper than an O-scope,
wouldn't you say?

> And those peak reading meter cannot
>tell you whether the modulation symmetry is unbalanced and consequently
>whether the trough is clipping while you still have room to go on the
>peak.

...audio analyzer...cheaper...more accurate...easier...squawk!

<snip>
>> These devices were invented because it is either too expensive
>> or too impractical for the average Joe to make the adjustments any
>> other way. For example, do you use your scope as a wattmeter or do you
>> just use a wattmeter?
>
>I use both. The wattmeter gives me the accurate answer,

Didn't you just get done saying that I shouldn't trust my wattmeter
for accuracy? Oh well...

> while the scope
>allows me to 'see' the components that make up the signal. I would never
>look at the output of any radio without running it though the meter,
>scope and spectrum analyzer (they're all in line), so I can see the
>state of health of the radio. Those three instruments tell me 98% of
>anything I'd need to know. The rest is not important enough to care
>about.

What I meant was if you would replace your wattmeter with a scope for
regular use. If you do, then I can make you a really good deal on some
swamp land in Arizona.

>> Do you use your scope to check the voltage of a
>> battery or do you use a voltmeter? Most of the equipment I have
>> described is much smaller, much less inexpensive, and much easier to
>> use than an oscilliscope.
>

>True, so why not have both? That way you use the best tool for the job.

You have the best equipment for the job even without the scope. The
scope is just an expensive piece of redundancy.

<snip>
>If you have limited funds and you had a choice between buying a scope or
>a distortion analyzer, which would you buy? Keeping in mind the fact
>that a distrotion analyzer is only useful for one thing, while a scope
>can do a multitude of measurements. If absolute accuracy is not
>required, it's really a no-brainer.

You are correct, it's a no-brainer -- the distortion analyzer. The DA
may be intended for one purpose, but it can tell you quite a bit more,
not just about the AF but about the RF as well. That's because when RF
is distorted it distorts the received AF. So just by hooking up the
audio sig-gen on the input of the DUT and a DA to the monitor, you can
determine if there is a problem. If there is, hook the DA to the
output of the modulator. If the problem is the same, it's in the audio
section. If not, it's in the RF. By adjusting the input you can adjust
limiting, modulation, bias (if it's adjustable), compression (if it's
adjustable), etc. Plus you will have enough money left to get a used
van plus a new set of tires and take your shop mobile!

<snip>
>> Not usually. Many times you will hear what you can't see on a scope.
>> For example, I can hear IMD before I can see it on a scope, but I -do-
>> need a distortion analyzer to determine the amount of any distortion
>> that I can't hear. Using your logic, we would all be tuning our BFO's
>> and adjusting our tone controls with an oscilliscope!
>
>Well you could. Run the one frequency into the vertical input, and the
>other frequency into the horizontal, and tune for a circle pattern ;)

But you don't need to do that, do you? Of course not.

<snip>
>> >* The onset of clipping will not likely be heard on the monitor and is best
>> >checked for with a different device.
>>
>> Yes, a distortion analyzer. A scope won't see it if you can't hear it.
>
>Yes it will. The human ear is very forgiving of distortion.

I don't think so. If that were true then distortion wouldn't be such
an issue with audio amps, stereos, tape and CD players, etc.

> Why do you
>think so many "keyclowns" live with their overly distorted radios, and
>then claim that they sound good?

Because they LIKE the sound of distortion -- to them it sounds like
POWER! Kinda like a good J.H. guitar rip but without the class!

>A scope can see the modulation clip or flattop long before it is audibly
>apparent. By the time you can hear it, you're already splattering badly.

Now that makes sense: "by the time you can hear it, you're already
splattering badly". Is that to mean you can't hear the splatter until
it's really bad? Or you can't hear thunder until lightning strikes
your house?

<snip>
>But until you put the monitor on it, you will not be ablew to determine
>the extent of the distortion, and whether is is distorting due to non
>linearity, instability, or some other factor.

If the amp goes kaput you obviously have a problem, and you don't want
to make it worse by running full power to test with a scope (you also
don't want to risk damaging the scope with a power RF amp!). Shut it
down, do a visual inspection and check resistances, because you might
have a shorted transistor or an open trace. If that checks out ok then
apply power and check no-signal DC potentials. By then you should have
found the problem with most amps. If you haven't, apply a small signal
to the input and check RF voltages on your collectors. If you can't
find the problem that way then you shouldn't be working on such
things.

BTW, 'instability' is an Eitner word for anything he can't explain,
but usually it's oscillation caused by feedback and/or excessive stage
gain. If the amp becomes 'unstable' and starts oscillating, it won't
continue for very long because something is going to burn up. The
problem is usually caused by failure of the neutralization device or
circuit, if it has one. And if there is any form of neutralization in
the amp it's probably in the form of a small resistor that can be
blown very easily. If it doesn't have -any- method of neutralization,
add one. You will also find that adding a little neutralization will
improve the linearity.

<snip>
>Hmmm.... I'd say that a scope is the next piece of equipment after an RF
>signal generator.
>My list of equipment in order of relative importance is:
>
>A good soldering station
>VOM
>DVM
>Wattmeter
>Frequency counter
>Signal generator
>Scope
>Spectrum analyzer
>Distortion analyzer
>Noise source

Here's my priority list for CB repair (test equipment only):

1. Comm analyzer is first choice, but in lieu of that:
2. Spectrum analyzer (ok, also too expensive);
3. RF voltmeter;
4. DVM or VTVM (preferably both);
5. demod probe;
6. RF signal generator
7. frequency counter;
8. audio distortion analyzer (mine includes an audio function
generator including white and pink noise, which would otherwise be
next on the list);
9. impedance bridge;
10. capacitance tester;
11. field strength meter;
12. GDO;
13. wattmeter;
...
88. Oscilliscope;
89. Freon;
90. Concrete floor (3-foot drop test).

>> > And no, your wattmeter will not
>> >give you a better representation than the scope will.
>>
>> You pump in 1 watt and out comes 10. Put in 2 watts and out comes 20.
>> Put in 3 watts and out comes 30. That's linear. The accuracy depends
>> on the accuracy and measurable gradient of the wattmeter. An RF
>> voltmeter (with a dummy load, of course) would be even better! And
>> certainly more accurate than a scope.
>
>How do you figure? A scope IS an RF voltmeter. Assuming that it's kept
>calibrated, it can make very accurate voltage mesurements.

Oh really? What is the accuracy of a scope reading of, say, a 14 volt
peak? One-hundredth of a volt? Not unless you have a really big CRT!
In fact, what is the accuracy rating on your scope? Is it a percent of
the signal range? What is that percent? A DVM is usually good for plus
or minus 0.1%, how does that compare with your scope? I don't care how
much you paid for it, the DVM with an RF probe blows your scope away!

And what about frequency? Most freq counters are good for 1-1/2 counts
per cycle with 8-digit resolution. How does that compare with your
scope? It doesn't even come close! Which is easier: counting peaks and
divisions and calculating your results, or reading it from a digital
display? THAT'S a no-brainer!

How do you measure distortion with your scope? Will it give you a
deviation ratio? Will it provide a distortion percentage? As far as I
know you just look at two different waveforms and make a subjective
judgment. Not very accurate, is it? The accuracy changes according to
how much sleep (or alcohol) the operator had the night before!

>> If you wanted to get that kind
>> of accuracy from a scope you would need to constantly switch ranges

>> and shift the vertical position. And that's still not as accurate, nor
>> as easy, as reading four digits from a $10 meter and an RF probe that
>> you built with the other half of that $20 bill.
>
>How accurate do you think a $10 meter is going to be? Don't confuse
>accuracy with precision. A digital meter can give you a very precise
>reading, but its accuracy is only as good as its design. And a $10 meter
>is not going to be as accurate as a $400 meter or a comparible scope.

LOL! That's funny! I have a few DVMs, and one of them is an ugly cheapie I found at a yard sale for $5.00. It is just as accurate as the others (except for that cheap little auto-ranging piece of crap from Radio Shaft). It is more accurate than my best VTVM, and MUCH more accurate than any scope I have ever seen! And with 4-digit resolution it beats a scope every time! The only thing I don't like about it is that it isn't very accurate with low resistances (about 30 ohms and below), but that's ok because I have four more DVMs, a resistance bridge, two impedance bridges, two R/C bridges, and three VTVMs, all of which will do the job. None of them cost me more than $20.

Now I'm sure you know how to measure resistance with an oscilliscope, don't you? First you need a DC source, then a precision resistor of known value. Put the two resistors in series and read the voltages. Then take the voltage ratio and transpose it to the resistance ratio and solve for the missing resistance. So after all that fuss, just how accurate do you think you can get with your o-scope? As accurate as a DMM? Even that RS cheapie? No, I don't think so!

<snip>
>Back to that Time=Money equation again. It takes a lot of time to
>manually plot the linearity of an amp using your method.

About 2 minutes for a rough plot, enough to get a solid line (or curve, as the case may be). You have to do the same thing using an o-scope, and it takes longer than that just to hook up for a trap test, so what's your point?

Time=money? You can cut corners by using a less-accurate piece of equipment that takes longer to set up and measure for each test; or you can use the right tool for the job, get the job done quicker, and know that you aren't missing something along the way. How much time does it take to measure resistance with an o-scope? Sure, there is another piece of equipement better suited to the job, and that's my point through all of this: There is all kinds of equipment that is better suited than an O-scope to do the job of testing a radio! And that equipment is less expensive and more accurate ... squawk!

> A scope can
>give you an instant snapshot of what you are looking at.

So can a camera. But what you are looking at isn't necessarily what
you need to see; it may even be -more- than you need to see.

> It may not be
>as precise, but it is, as they say, "good enough for government work".
>Remember, we're talking about CB radios here, not high end audio
>components.

I agree, it is not as precise. And yes, for CB work precision isn't
critical. Which brings up the question (for about the eleventh time)
of why buy an expensive oscilliscope when everything else is cheaper,
faster, and more accurate to boot? Because it's 'cool'? It's certainly
not because you don't have an understanding of radio, but I think you
might be lacking in the understanding of basic test equipment. Now if
we were talking TV repair, an oscilliscope is the most important tool
on the shelf. And if you are an engineer or lab tech then the scope
should be written off as a tax deduction. But we are talking CB radio.
The only thing I have ever used a scope for on a CB radio is to look
at the PLL loop. And I suppose even that could be tested with an audio
voltmeter if I had the gumption to build one, but it would certainly
be cheaper and easier to use than a scope!

<snip>
>> You can if you switch down the time scale so you are not triggering
>> faster than the low-frequency disturbance, then increase the voltage
>> scale and shift up or down to a peak. Do you do that as a regular
>> practice?
>
>Sure, don't you? I switch time bases and voltage scales all the time.
>That's called using your instrument to its fullest capability.

Gee, doesn't that take time? Remember, time=money, or did you forget?
Wouldn't it be much easier just to see if the needle is fluttering on
your distortion analyzer that is already hooked up? THAT'S called
"using your instrument to its fullest capability".

<snip>
>But if you can't afford an audio distortion analyzer, the scope is
>better than your ear.

How can you afford a scope and not a distortion analyzer? Well, if you
spent all your money on the scope, that would explain it...

>> >> asymmetrical modulation,
>> > * This is easy to spot on a scope.
>>
>> Not always. It depends on the severity, and the accuracy of your
>> sine-wave stencil.
>
>It's becoming apparent that you either don't utilize a scope
>effectively, or you have one that is woefully out of date. Most modern
>dual trace scopes make short work of determinning symmetry.

I know every feature of my HP 1722A, but I don't need it to work on CB radios. And to -me- it's becoming apparent that -you- are becoming so indulgent in the luxuries of state-of-the-art that you are forgetting the fundamentals.

Hmmm..., maybe that's the master business plan -- the evolution of 'techno-sapiens', a breed of humans that is incapable of survival without modern technology, creating an inelastic demand for a market that would otherwise be based on disposable income. It seems to be working for Microsquash, since there are people writing software with kludgework programming languages like VB for multi-megabyte operating systems based on maximum overhead and minimum operability, when the same programs could be written in assembler, C or Pascal that would be much faster, smaller, and reliable. All it takes is for the programmer to extend his learning curve a bit. So that must be it, people are buying their education! Paying money so they don't have to think for themselves! Geez, if the big corporations hear about this trend there's no telling how soon it will be before we don't need to think at all; just do what we are told, unable to consider any alternatives that could be better -- just follow the herd.

Whew, where did THAT come from...!

<snip>
>A good distortion analyzer (like the H.P. unit I have at work) costs
>many times what a decent scope costs. If you can afford a D.A., you can
>afford a scope too.

Already addressed, and more than once.

>I really don't want this to devolve into a pissing contest

It isn't a pissing contest. I keep repeating myself and giving different practical examples each time, but the points I'm making are being completely ignored.

> (The
>keyclowns do that for us). The bottom line is that each tech uses what
>he/she feels most comfortable with. But if you are a beginner, on a low
>budget, a scope would be something to consider long before the more
>fancy equipment such as a spectrum analyzer or distortion analyzer.

If the beginner is on a low budget, then forget the scope and get the less expensive, easier to use, and more accurate equipment (squawk!). If the budget isn't a concern, get what you want. But I still recommend getting a low-end scope to get some hands-on experience so you know what to look for in a high-end scope if and when the desire ever hits. And the beginner won't be intimidated with all the buttons, knobs and switches, or all the programming routines and functions he will probably never use. Just get the basics down first: V- and H-position, time, amplitude, triggering, sweep, etc. Hell, just getting a good ground so you don't get 100V of AC in your scope takes a bit of practice, too.

Here's something fun to try for a beginner: Take one of those inductive telephone pickups, or even an antenna loop from an AM stereo, hook it up and walk around the house. Try and identify all the signals you pick up. Hold it close to an alarm clock, a laser printer, and other appliances. Then do the same thing using a computer for an audio spectrum analyzer. Did you know that 60 Hz has sidebands? Or that some AC appliances will show freqs down to 40 Hz? When you look at the O-scope, can you see all the harmonics of AC that go up beyond 20 kHz? stepping every 60 and 120 Hz? I doubt it.

> Its
>versatility is fairly obvious to those that take the time to understand
>what its capabilities are.

And it's limitations are obvious to anyone that knows the capabilities of simpler, less expensive, and more specialized equipment.

> A scope can greatly enhance your ability to
>see what is going on inside a radio.

To that I will agree: It is a great learning tool.

Hey Rick

Thanks for the info..it is helpful..I don't know what the antenna's came off of ......but I would like to put them on my 89 ford 150 pickup (mounted to the big side mirrors)..right now I have Rg -59 coax running the radio and to the antenna's ...the antenna's are your stardard (500 watts) antenna's you would buy at a truck stop. I think the name brand is ,,,,,Bargin anteena's ......but ...I'm not sure ....The one antenna is messed up because when I did a swr check on it ...it was all out of wack and I couldn't set the swr on the antenna...so now I am looking at buying 2 more antenna's ...but this time..... the same model and lenght ..as the above ones....but (1000 watts) each instead of (500 watts) each I am running now....is this a good idea....or bad.....

should I get longer antenna's ..with the bigger watts....

thanks for your help

Zeek

Well, if just looking cool, or you want to look like a big cber or
whatever it is, then go with two longer antennas, if you want
performance use one good antenna. Why do you think you need the
antennas capable of handling 1000 watts? Are you running that much
power? If you are running say 50 watts, and using antennas capable
of handling 500 watts going to antennas capable of 1000 watts does
not increase your signal. All you need is an antenna capable of
handling the power you are running. If you are running 1000 watts,
then I sure would not want to set in the cab with you when you
talk on the radio.

The false rumors are coming from you; I fabricated nothing. Re-read
the info that YOU posted: It clearly says (in one phrase) "imported
and marketed"; that means NEW radios AS OF THE DATE OF THE NOTICE.
Existing radios are "grandfathered" in, precisely as in the case of
those cell-capable scanners. Existing HR2510s and HR2600s, etc., CAN
still be bought, sold, and traded. Just like the PRO-2006 can still
be. Legally. Maybe you should check with the FCC before you display
your ignorance to the entire world? Nahhhh, you wouldn't do that;
you'd rather waste all sorts of bandwidth proclaiming your false
rumors and acting like you're a "somebody". Poor little man!

And please note that they also clearly say that these radios ARE
amateur transceivers. So they ARE legal for use on 10 and 12 metres if

they're modified. They simply are not legal for use as CB radios.
Don't you have any reading comprehension? If you don't understand
English, please ask someone for clarification.

> -Aaron-

It's not an opinion, it's a fact. Have you ever tried to unsolder a
40-pin IC from a flow-soldered PC board? Didn't think so. It is NOT
easy to modify those radios, although it can be done. The Ranger is a
different story; take off the top and change a jumper - but we're not
talking about them. And how about all the amateur xcvrs that are so
easy to mod (just clip a wire or a diode)? Why aren't you going after
them? Perhaps you are admitting that you haven't a clue?

"if/when (I) get caught"? Oh puleeze! The radios are legal for use on
ten and 12 metres. And I can LISTEN to any radio I want to listen to,
even if it isn't legal for transmitting. Dream on, TROLL!

I suggest you call your buddies at the FCC and ask for clarification
of the Notice. BTW, did you ever call their Interference Complaint
Line and get their message? Doubt it. You wouldn't do anything that
would prove yourself wrong. TROLL! And a LAZY TROLL at that! Get a
life.

Pyramid ; JUNK JUNK JUNK JUNK.
Have You ever heard the saying " You pay peanuts You get the Monkey "? Well
this applies to the pyramid power supply's . If You want a good power supply
for Your need's get a radio shack or Astron or even a tripplite . Radio
shack will probably be the least expensive and hold up well But what ever
You do DON'T buy a Pyramid Or You will get a Monkey with high sex drive

Hey JJ

I thought if I ran with the bigger antenna's (1000watts) I would get a better signal ...and also recieve better because of the higher watts...when I looked at the antenna's at the local truck stop on the package it tells me the are rated for (500) watts or (1000) watts there are many there with different watts on then with different prices for each.....I am running just a stock radio...(Uniden pc68xl)

thanks

Hello Dick:

Ok the BBQ was a smashing success. Had piped in and out side Music, mostly Country and Western, and Oldie but Goodies type music. But after the BBQ Steak and Chicken, Corn on the cob, Mexican Ordevers, chips and dip, and of course some blue stuff that was out of this world, that I used my fingers to get the last morcells, dinner had a little 70's Disco music, had a blast!

Most everyone was gussied up pretty nice, but that didn't stop the guests from having to have a Twilight Dessert motor cycle run. The Hosts house is on the fringes of the desert, so most everyone had to have dirt bike run. I'll bring my Yamaha 250 next time, U bet! That thing has more horse power that the rider has IQ, its a blast! The Tow Trucks where mostly parked out back.

We even replaced a old Coax having a 1978 date code on it with new LMR400, wow what a difference good Coax makes. I didn't climb the 60 foot tower, the Host did, I think thats in the Etiquette Rule Book, under antenna repair and upkeep. I did bring my trusty 100 watt soldering Iron with the Bitchen machined round inside curve on the tip, for soldering PL-259 connectors, oh yeah this is a snap. But should have brought some solder. A emerengcy inspection of underneath everyones car seat and inside the trunks yielded a short length of solder, that did the job. Theres something to say for the good silver plated PL-259 connectors. Probably even found a few empties there also.

Ok I tried that technique, whats next? She may have the walking birth defect thing down Pat.

Actually you are close to right for the wrong reasons. Remember that an efficient radiator is not a broad one. Similarly, a 50 ohm resistor is broad as a barn door but is a really lousy radiator. So the antenna manufacturers find a way to incorporate some resistor in the mix to make it look decent on an SWR bridge. The techies call this 'Q' and develop a religious ritual over it.

The problem is that when fed with some power these resistors tend to get really warm and go poof and let out the magic smoke. The usual approach is to wind the loading coil with real small wire. So by increasing the wire size you do increase the heat capacity and in the bargain get a little better radiation but a little worse bandwidth. Some of the loading coils on competition (?) antennas look like the final tank coil from WLW but aren't much wider than Channel 6.

The people who really have this problem is the Government spooks using FHSS (frequency hopping spread spectrum, originally patented by Hedy LaMarr BTW) who are in no position to wait for a tuner to get it right so they settle for what amounts to a big folded dipole with a monumental carbon resistor opposite the feedpoint. Broad as a city bus with a 10-15% radiation efficiency at best. So they just run more power. If you walk down embassy row in DC you will see these and what are called log-periodic arrays that look like a big hairbrush and cost somewhere around $5-10k a copy spewing rf back to the motherland.

Like most things in life there ain't no magic and no free lunch.

Hey, you are male; you are a birth defect and the biologists agree with
them. The dear ladies are a lot more realistic about these things and a
lot more in control than we like to believe.

Enjoy life while she goes thru the list of 'Birth Defects I Have Known'
and figures out where you fit.

Thanks for your reaction but i already do. If i use mij standaard mike i
have a very dull modulation, not a clearone.
When i use my Turner plus three-mike everything goes well, but he picks up
to much from the background and that can be very annoying in my
situation(yelling from children to my wife or vica versa;-).

I used to use a D104 handheld, with the volume barely cracked open,
and I would speak right into it. This would give crisp, clear audio
with a little bass response. I now use an unmodified PC122 with a
stock mic. If your stock mic is muddy, try a different one. I have
swapped the elements in stock mics to change the sound. Also,
different radios have a different audio response. A mic will sound
different on another radio.

I have two Pyramids. A PS-14KX for my UHF/VHF radios, and a PS-26KX
for my ICOM-756. They get heavy use, and work fine for me. The only
complaint is the voltage meter isn't too accurate on the PS-26.
Considering that I bought these new on eBay and paid less than half
of what the others cost, I'm more than happy with them.

all turners are like that. you turn the gain way down and talk about 2-3 inches away from it and youll sound perfectly clear with no background noise.

One thing I've found out about RS products, they are
adequate, but not exceptional. I've got RS stuff here
that has outlived it's usefulness, but still work great.

My Realistic dual cassette tape deck still works. My Teac,
(which sounded better) died a long time ago. The speed
changes after a few minutes. Anybody got schematics?
The motors always run when it's on. My brother left it on
for a week. That must have fried the speed chip or regulator.

Tim,

Your an idiot. But I have to admit that you have an interesting porn
home page. Obviously you like tits and asses, but you know nothing at
all about ham radio. Better keep your hands on your pecker (like that
one picture on your web site) and off of the microphone.

The answer is to use your amp on low so it sounds clean and
doesn't splatter. Make sure to use an amp with bias. Comp
boxes have no bias and operate in class C. They will not be
clean. Do it right the first time, get a Texas Star 250 or 500.

I talk just as far with my 2 pill as I did with my 4 pill 667V.

The 250 runs cooler and draws less juice. Just don't run more
then a 50 watt dead key from it, you'll sound great. BTW, one
minute of AM makes it hotter then 5 minutes of sideband. I don't
need a fan for SSB, but aim a fan at it for AM use.

Scott69 is giving it to you straight, Scott. An AM linear is really a pretty touchy thing to build but there are some real blacksmiths in the biz. It takes some restraint on the part of both user and builder to get it right.

First off, because of the steady carrier an AM amp gets really warm so pushing it to the last inch just is not really bright. The second thing is that AM has FOUR times the peak power as it does with no audio so the amp does have to have some headroom to reproduce your sterling tones accurately and not sound like dogshit. If you push too hard for power you actually lose modulation percentage as well as sounding crappy.

Now you are going to be sold everything from 'peak and tune' service to 'swing kits' to who the hell knows. Keep the wallet in your jeans. When you start watching the bouncing meter and your head starts going up and down, padlock it to your shorts. There are some real bears in the CB woods. Be particularly wary of the swang artists; next time you hear one note that they sound louder but really do not compete all that well with the background noise. That is because what they do has zero to do with modulation and everything to do with faking out your receiver for an instant. These guys have more superstitions than a tent show revival to take your spare change. Keep in mind you came to communicate, not make meters wiggle, and you will generally come out ahead.

Scott69 alluded to Class C and bias. To accurately reproduce a signal, and that is in fact what linear means, a transistor must draw current over at least half of the cycle -- either the positive or negative side it

makes no diff. A transistor will not naturally do that by itself and requires a small kick in the butt to get it set up to do so, bias if you will. But this adds cost and complicates the set up so the blacksmiths tend to leave it out with less than stupendous results. In general, if it will not run SSB it won't run AM worth a damn either. In Europe where FM is the rule the amp need not be linear but you aint trucking down the M6. A lot of blacksmiths get their designs from VHF FM amps and scale them; Class C means that they do not draw on half the cycle.

Yes there are those here who attack amps like Carrie Nation attacked saloons. I do think you will be underwhelmed by what going from 5 to 200 really will do for you but it is your life. But if you must, do as U69 suggests and get a decent one and operate it like you had a functioning brain to go with the functioning testicles.

I suggest you actually read the information before you begin making up
lame excuses:

SCRIPT FOR F.C.C. CALL CENTER

1. C.B. LINEAR POWER AMPLIFIERS

Q. What is a "Linear Amplifier"?
A. This is a radio frequency (RF) power amplifier which increases the
output level of a 27 MHz C.B. radio transmitter above the level which
is permitted in the FCC rules.

Q. How much power are C.B. transmitters allowed to use?
A. Section 95.410 of the rules limits the output power of a C.B.
radio which is using Amplitude Modulation (AM) to a maximum power of 4
Watts. If the transmitter is using Single-Sideband, the maximum
permissible power is 12 Watts "Peak Envelope Power" (PEP).

Q. Is the use of a linear amplifier at a C.B. radio station legal?
A. No. Section 95.411 prohibits the use of any kind of power
amplifier at a C.B. radio station.

Q. Why do some C.B.'ers use power amplifiers?
A. Some C.B. radio operators use power amplifiers in order to
increase the range of their C.B. radio transmissions, or to over-ride
the signals from other C.B. stations on the same radio channel, thus
being able to monopolize the channel, in violation of Section
95.407(e) of the rules.

Q. Why is it illegal to use a power amplifier on my C.B. radio?
A. The C.B. Radio Service is intended as a strictly local
communications service, not as a substitute for the Amateur Radio
Service for communicating with stations hundreds, or thousands, of

miles away. So using more power than the rules permit serves no legitimate purpose. Since all 40 of the C.B. radio channels must be shared by all users (no user may "own" a particular channel), the use of excess power can have a detrimental effect on other users of the same, and adjacent, channels.
In addition, the use of excess power greatly increases the possibility for creating interference to neighboring consumer electronic devices such as radio and television receivers, hi-fi and stereo audio systems and telephones.

Q. Are there other names for these devices?
A. Yes. Linear Power amplifiers are also called "Linears", "Power Amps", "Heat", "Foot-warmers", "bi-linears", etc. Some transistorized models are referred to by the number of "Pills" in the unit (a "Pill" is a way of referring to the transistors, so-called because the transistors resemble an over-sized Asperin tablet).

Q. How much power do these amplifiers produce?
A. Typical amplifiers produce from 50 to 200 Watts of power. However, some manufacturers sell units which are capable of producing thousands of Watts of power.

Q. Are there any types of legal linear amplifiers?
A. Yes. Amplifiers which are manufactured and intended for use by licensed amateur radio stations, and certain other licensed radio services, may be legally manufactured and sold. However, there are certain limitations which these devices must adhere to. One of these limitations is that such amplifiers must not be capable of operating in the C.B. band.

Q. What are the limitations of legal amateur radio linear amplifiers?
A. Power amplifiers intended for use at licensed amateur radio stations must comply with the provisions of Sections 97.315 and 97.317 of the F.C.C. rules. Among other things, they must be approved by the F.C.C. In addition, any amplifiers intended for use on any amateur frequencies below 144 MHz shall exhibit no amplification capability on frequencies between 26 and 28 MHz.

Q. How do I know if an amplifier is legal or not?
A. All legal amplifiers must be issued an F.C.C. grant of equipment certification. Every such approved amplifier must have a sticker indicating the name of the manufacturer and the F.C.C. Identification number (FCC ID). This FCC ID number can be verified by checking the F.C.C./OET Equipment Authorization database on the F.C.C.'s Web Page. If an amplifier does not have such an FCC ID, it is not a legal amplifier.
The F.C.C. Laboratory can provide a list of manufacturers who have been granted equipment authorizations for their approved linear power amplifiers.
The F.C.C. Laboratory can also provide (an incomplete) list of known illegal amplifiers. This list keeps growing as additional makes and models become known to us.

Q. I have an F.C.C.-approved amateur radio linear amplifier. Is it OK for me to modify it to operate on the C.B. frequencies?
A. No.

Q. Can I sell my linear amplifier?
A. Only if it is an F.C.C.-approved amplifier. The importation, manufacturing, marketing, use or possession of non-approved amplifiers is illegal.

Q. If I can not sell it my illegal amplifier, what can I do with it?
A. Destroy it.

Q. I see linear amplifiers offered for sale on Internet sales sites. Is this legal?
A. Only if they are F.C.C.-approved amplifiers. F.C.C.-approved amateur radio amplifiers which have not been altered in any manner so as to operate on the C.B. radio frequencies, may legally be sold to other amateur radio licensees. The sale of any type of non-approved C.B. amplifier within the United States, under any form of disguise, to anybody, is illegal.

Q. I tried to sell my linear amplifier on an Internet sale site, but it was rejected by the administrator of the sale site. Is there anything I can do to prevent them from pulling my amplifier from their sales?
A. The F.C.C. has no direct control over Internet sales sites. The sale site administrators develop their own policies regarding the sale of potentially illegal devices or equipment. If the sale site administrator asks the F.C.C. about the legality of a particular type of device, we will explain our rules and policies. However, it is up to the sale site administrator to make the final decision as to whether to accept or reject any particular device for sale.

Q. I see various manufacturers and vendors advertising C.B. power amplifiers on their Web sites. Is this legal?
A. No. The importation, manufacture, sale or offer for sale, of non-approved amplifiers is illegal.

2. NON-APPROVED C.B. RADIOS

Q. What is a legal C.B. radio?
A. All radio transmitters and receivers which are intended to operate on the 27 MHz Citizen's Band (C.B.) channels must be approved by the F.C.C. before they can be imported, advertised, sold or used. The manufacturer must be issued an F.C.C. grant of equipment authorization, called "certification", as indicated by an FCC ID on each unit. If the radio has a label showing an FCC ID, and the ID can be verified by checking the Equipment Authorization database on the F.C.C./OET Web page, then the radio is legal.

Q. What kind of radios are illegal to use on the C.B. radio channels?
A. Any radio transmitter, receiver, or transceiver which is designed by the manufacturer to operate on the C.B. radio channels, but which

has not been granted an F.C.C. equipment authorization is illegal. These non-approved radios may appear in several different forms:
1. "10-Meter Amateur" radios, which have been designed so as to be readily alterable to operate on the C.B. radio channels, and/or on other non-amateur frequencies in the frequency range from about 24 to about 32 MHz;
2. "Export" or "full channel" radios, which are designed to operate over all, or a portion of, the radio spectrum from about 24 to about 32 MHz, including the 27 MHz C.B. radio channels; or
3. F.C.C.-approved C.B. radios which are designed so as to be readily alterable to operate on frequencies in the range from about 24 to about 32 MHz, which are not assigned to the 27 MHz C.B. Radio Service.

Q. What do you mean by "readily alterable"?
A. This means that the user of the radio can add, or change, its operating frequencies by simply flipping an internal switch, by clipping the leads of, or installing, a simple component such as a diode, resistor or jumper wire, by installing, moving, or removing, a jumper plug, by connecting or disconnecting a connector, by replacing a plug-in semiconductor chip, or by programming a semiconductor chip using special access codes or an external device, such as a personal computer.

Q. What are these other frequencies between 24 and 32 MHz used for?
A. These frequencies are assigned to many different licensed radio services, both in the United States, as well as in other countries. Authorized users include Maritime and Aeronautical radio stations, standard time and frequency stations, international broadcasting stations, amateur radio, and government stations. A portion of this spectrum is also allocated to radioastronomy, where scientists are attempting to listen to very weak radio signals coming from distant stars and galaxies. No radio transmitters of any kind are permitted within these radioastronomy bands, so any earth-bound transmitted signals can completely disrupt radioastronomy observations.

Q. I don't hear any other stations on "my" frequency, which is not one of the 40 allocated C.B. radio channels. So what is wrong with operating my radio station here?
A. You may unknowingly cause interference to legitimate communications. Many of these frequencies may appear, to the casual listener, to be unused. Some of the authorized users may be using emission types which can not be plainly detected. Or, their transmissions may be intermittent. You will not hear any legitimate signals within the designated radioastronomy bands. However, just because a frequency sounds clear, that does not mean that it can be used without proper authorization.

Q. Why do some people operate illegally on these frequencies?
A. Many of these frequencies may appear to be "free" of any legitimate users, so some people think they are "free for the taking".

The illegal radio operators are commonly referred to as "freebanders", and use their radios as a form of hobby, similar to Amateur Radio. But for many reasons, these people choose not to obtain an amateur radio license. They operate on these frequencies because under certain weather and radio propagation conditions, their signals can extend all the way around the world, enabling them to communicate with other similar unlicensed stations.

Q. What can happen if the F.C.C. catches me operating on an unauthorized frequency?
A. You are subject to severe penalties, including monetary forfeitures, confiscation of your radio equipment, and possibly even jail time.

Q. I've heard that some of the "big name" amateur radio equipment can also be altered to operate on non-amateur frequencies, including the C.B. radio channels. So why are these radios not considered to be "non-approved C.B. equipment"?
A. First, it must be emphasized that use of this type of amateur equipment on unauthorized frequencies, including using it on the C.B. radio channels or other non-amateur frequencies in the 24 to 32 MHz range, is illegal, and doing so will subject the user to the same penalties as mentioned above.
That being said, there are legitimate reasons for some amateur equipment to be used on certain non-amateur frequencies, such as on military M.A.R.S. (Military Affiliate Radio System) and C.A.P. (Civil Air Patrol) frequencies. MARS and CAP radio stations are only authorized to operate on specific assigned (non-amateur) frequencies. With just a few exceptions, most of the assigned MARS and CAP frequencies do not fall within the 24 to 32 MHz frequency range. Although some models of amateur equipment (manufactured by companies such as Alinco, Icom, Kenwood, Ten-Tec, Yaesu, etc.) may be capable of operating on the C.B. radio channels, they do not display the assigned C.B. channel number, nor are they designed to deliberately facilitate operation on the C.B. channels.

>

I should have clarified. I know that the radio is only going to draw as
much current as it requires, and having more current available won't make

it perform any better. It seems to me (and I could be wrong) that the problem with inexpensive power supplies is an inflating amperage rating by the manufacturer. You buy one rated 10A Continuous, draw 10A continuously, and the supply eventually fails (or the voltage drops, or whatever). To combat this problem and save a few bucks, I figured that while an inexpensive supply rated at 20A continuous may not actually supply 20A indefinetly, surely it will have enough current available to power my lowly CB - and without working the supply too hard. =)

As to voltage drop and ripple, I wanted to know how much was permissible because I will be servicing CB trancievers eventually (even if they are just mine). I know that incorrect supply voltage will cause me grief while testing circuits, but I don't know how much deviation from ideal is too much.

To summarize, my question could have been stated as "What types of tolerances are permissible in a supply suitable for CB radio service on the bench?" After reading the posts, I think I'm safe with a Radio Shack unit or similar - at least for now.

Well Richard, you have done just about everything, including telling the guy to use an amp illegally on 11m. At this point you may just as well build the guy one, put a few bucks in your pocket, and put a smile on Pirate Tim's face.

The best thing you could have done is kept your mouth shut at least, and let him buy a cheap Class "C" splatter box. The more noise it makes the quicker he gets busted when the local neighbors complain to the FCC.

> a ham exam.)
>

Hey, I like this question.

I've held my A+ for a while now. I needed it when I worked in the service department as a technician for a local systems integrator. I had already been working as a tech for other companies for a few years, but the company mandated that all of their techs be A+ certified. Fine. I immediately went down to my local Prometric testing center and took the tests. Passed both in 7 minutes. Yes, the test is a bit of a joke, it proves little. Still, I occasionally encounter somebody who maintains that the test is easy, proves nothing and therefore is a waste of time. Fine, I agree. In one case a kid with a bit of a chip on his shoulder was spouing the above mentioned rationale for his not taking the test. I was trying to prove a point (namely, that he didn't know everrything and to quit being so cocky) so I offered to make him an appointment to take the test, all expenses paid. He declined. I felt I made my point.

I haven't done tech-type work in a while, as I am happily employed as a network engineer. I leave the workstation prolems to my customer's help desk personell, so that I can concentrate on other issues. What a joy! =) Also, everybody and their mother knows a little something about computers. It seems that everybody has a family member, or neighbor, or whoever that knows enough about computers to fix whatever problems they have. There really isn't any money in servicing PC's any more, so I don't waste my time doing it. My normal rate is $135/hr. My larger customers are more than happy to pay this for network design, implementation and maintainence. Asking Suzy homemaker to cough that up for fix her AOL problem is silly. Still, I fix computer problems for close friends and family, no charge. It keeps my skills honed, it's fun (which is why I got into computers in the first place) and it saves them some money. Since I love my friends and family, I would hate to see them pay good money for some know-it-all kid who doesn't know what he's doing.

To answer your question, my first computer was an IBM XT. 8088 @ 4.77 MHz and 256KB of RAM. I upgraded to 640KB of ram via 8-bit ISA expansion card. The 8088 processor has an address bus only wide enough to address 1MB of memory. 384K of it was used for BIOS, leaving the remaining 640K for everything else. Since the addressing width of the 8088 was a mere 8-bits wide, having 16-bit expansion slots is impossible. So the answer is "0" =) 16-bit ISA slots became available with the introduction of the AT, and 286 processor.

To be fair to you recently A+ certified techs - don't despair. You will probably never have to work on an old IBM XT =)

Some of the new digital scopes do well out to 4 or 5 digits. If you need more than that I agree a frequency counter would be preferred.

> And voltage measurements are not too
> accurate in comparison with modern digital voltmeters, mainly because
> you are looking at a trace on CRT superimposed on a grid instead of a
> number with 4 or 5 digit accuracy.

Try finding a digital meter that reads that accurate at RF frequencies! LOL. On many new scopes, both analog and digital, you can find cursor read-outs that takes the guess work out of reading a voltage level on the screen.

> A scope also requires constant
> alignment to maintain the accuracy it has.

So do meters. They have an internal DC reference that can drift and age just like anything you can find in a scope.

> For rough and general
> measurements that's fine, but for the accuracy that's needed with some
> of these modern radios it's just not enough.

Not to pick any bones here but the real question is just how accurate, and precise, do the measurements really need to be. Is 10 percent, 5 percent, 1 percent, or 0.01 percent good enough for the job at hand? In most cases the answer is 1 to 5 percent. Most modern scopes can do this well. For those cases where the above is not enough, again I would agree a dedicated instrument would be better.

>
> >For example a scope connected across a known 50 ohm load, and measuring =

> >power as well.=20
>
> As I stated before, you don't need a scope to read RF voltages.

No, but finding a good meter that will could be a problem. For example all of the neat looking HP true RMS reading lab grade analog meters you see kicking around many electronic fleamarkets are only good to about 10 MHz. You can't even use them for CB work or much else so I guess that's why you see so many selling so cheaply.

> >For another example some of the newer digital scopes have a built-in FFT =

>
> I may be mistaken because I'm not up-to-date on state-of-the-art, but
> aren't those FFT functions only for low frequencies? You can do that
> with your computer and a sound card.

Yes you can do FFT with the sound card, but the limiting factor is how fast can the sound card digitize the input. Most are limited to about 22KHz Max frequency. The Tek scope, I provided a link to in my last post, can digitize at a rate of 1 billion points per second, at the theoretical limit of at least two points at the highest frequency of interest, that works out to 500 MHz.

>
> >Also simple dedicated meter type instruments can't show you when the =

It can very from device to device. A single fixed value may work for one device, but not for another.

> And with an audio
> distortion analyzer you can check for crossover distortion plus any
> other distortion and/or nonlinearity, and with MUCH more accuracy than
> looking at a trace on a scope.

Well first I'm not convinced that an audio distortion analyzer works that well. Particularly after a friend of mine built a stereo Class "D" switching audio amp, at the 100 watt level, and one of those meters showed zero percent distortion when he ran it at full output. I can also show you a digital meter costing $200, with 0.1 percent RMS accurate reading on it's AC scales, that change their reading by 5 to 10 percent by simply switching the two leads on the test points with a signal at audio frequency on them. A really good electronics' tech will have learned after a lot of years that instruments can give false readings, and can fail in ways that don't make it look all that obvious there is a problem.

> For example, if your distortion level
> suddenly jumps as you reduce the bias, then the bias is too low. Or if
> it jumps while you increase the input then you are clipping. It will
> also tell you something that you can't see on a scope, and that's the
> optimum bias for lowest distortion.

What it can't tell you is what are the distortion products. Some are a lot less annoying than others. A scope, using the FFT function, not only lets you see how much distortion your getting, but also WHERE frequency wise.

> > or when the output RF =
> >stage in a SSB rig is operating class "C" due to a malfunctioning bias =
> >circuit.=20
>

> That's -too- easy: Just reduce the modulation gradually, and if the
> power drops off before your modulation hits zero then you are
> operating class C.

That's assuming the bias does not move around under modulation. That is exactly the problem with some simple diode bias circuits. The transistor can get starved for current under heavy modulation. In fact there was a very long thread on this news group some months back about this subject.

> >You will also need a scope to catch intermittent instabilities in the =
> >PLL reference oscillator, logic glitches in frequency divider chains =
> >etc.=20
>
> True, and that is what I was talking about before. But you don't need
> a super-charged, multi-trace, digital scope to see it, just a good
> trigger.

An regular analog scope may not show you what is happening, even with a good trigger. If for example you get an errand pulse once in a while, at even as low as few hundred Hz, the eye is not fast enough to catch it. What is used in this case is what is called a variable persistence scope. The old analog ones were very expensive, but the feature can be added to a digital scope relatively cheap.

> >While a good dedicated meter type instrument maybe more handy to use, =

I would agree here with you. I think he should check with several already established radio repair shops and get a bit of a "hands-on" feel for what he may need.

> It's obvious that we have different opinions about this.

Yea, but it's better than arguing about Part 95 at times. 8-))

> I'm sure he will get many other opinions.

Which is a good thing too.

After driving back from Indiana today, on a work related trip, and monitoring Ch 19, yeah, CB is going down hill fast, not Ham Radio. I had to sit back and laugh after one trucker commented that you can hear all about the mating habits of farm animals at any time of day on CB, but you just can't get a "bear report". Needless to say I switched over to 6m and enjoyed the band opening for the later part of the morning and early afternoon.

Leland C. Scott
KC8LDO

All in your judgment about the probability of his getting busted at all. The thread began with advice to buy a decent amp which Texas Star qualifies as being, barely, but one hell of an improvement on the usual run of CB crap. I am not in the punishment biz, Leland.

What I hope to do is deprive Red the Tech down at Happy Larry's Truck Stop, Funeral Parlor, and Emporium of CB Delights of a bit of ill-gotten revenue by putting out some straight poop on the subject. With any luck it might find its way into the mainstream of discussion long enough to prevent both the traditional limiter-clipped, swing kit, Class C amp rig and save some trucker a few centavos in the process. As I earn my keep these days with a CDL-B I have a soft spot in my head for the guys pushing rigs down the super-slabs in spite of trying to nail them on 28.085 (Channel 19 two-up). Besides, it passes time.

Speaking of which when do you plan to get ticketed for 28.anything??

Might suggest you look up Myers-Briggs Personality Inventory to learn a bit about how humans react to this sort of thing; I am an ENTP where I would suggest you are probably an ESTJ. The battles between NPs and SJs are legendary, Picture Thinking Perceivers vs Line-Thinking Judgers. We are not likely to agree on much of anything in the moral arena or what to do about it if we did.

There are several places where this shows up: no one is particularly happy about abortion but one group is out setting rules and punishments where the other group recognizes this has gone on for 7,000 years or so in spite of rules and gets to be more interested in keeping hemmoraging ladies out of ERs. Opiate addiction is not new and where some are out mopping up low-level dealers others are training roommates etc in how to handle ODs. Actually neither group is capable of making much of a dent but would

rather spend more time pissing on each other than working together -- much like what is happening here.

In the long run of things, the BBC has a lot more credibility than VOA and it is issues like this that explain why.

You wouldn't believe the looks, or the answers I've gotten
to that question. I told one newbie that I've built more
machines that been disposed of then he'd ever worked on,
and proceeded to tell him about XT's and 640K and 360
floppies and 8087's and 20 meg Seagates ST225's...

My company made me take the test. I had never needed a test to
prove I'd been in this stuff since 1986 before. Some of the major
manufacturers (the ones behind the test) require that before you
can be certified on their brand.

Heh, ya I know what you mean. Since we were an HP authorized service
center, I had to pick up alot of HP specific certs. What does this mean?
It means that I know (knew) how many DIMM slots various Netservers have
without popping the case <chuckle>.

Many of my customers won't let anyone who doesn't possess a CNE to touch
their Netware servers. So I'm a CNE. Ditto on the 2000 and NT servers,
so I'm an MCSE. Now this diseased line of thinking is affecting my
router work, so I need to get my CCNP as it seems that my CCNA stands
for "Cisco Certified Networking Amateur". Sigh. It never ends.

Not too long ago, I actually upgraded that old XT of mine (it still
works). I was at the flea market looking for parts radios, and came
accross this guy who sold old computers and such. I saw an 8087 math
coprocessor and asked him if it worked (it was in a static bag, which
was a minor comfort). He hadn't the slightest idea so I offered him 50
cents for it. He accepted, I took it home and installed it. It works. I
had an old 20 Meg Seagate in it for a while (the model escapes me at the
moment, probably an ST225). It died, and I can't for the life of me find
a replacement. Guess there's just not much of a market for MFM drives
anymore =)

That trucker has a fantastic sense of humor. With all of the bad stuff you hear on the radio, the occasional one-liner and friendly banter is what keeps me listening. I take the bad stuff with a grain of salt. By focussing on the good, and not letting the bad get to me, I have been able to continue to enjoy CB radio.

Unfortunately, there are many people who know just enough about computrs to be dangerous. A while back a friend of mine called me at 3 AM and was screaming HELLLLLLLLP!!!!! in my ear. He said his computer would not start. I went over to see the problem, his startup files config.sys, himem.sys autoexec.bat ect. were all gone along with many other files and directories (I despise the term folder). It seems he had been downloading all kinds of MP3 files, and filled his HD. So to make room he started deleting files he figured were not important.

I told him that I was going home and going back to bed, and that I'd be back around noon the next day, and for him to have his credit card ready.

Next day I took him to Toledo and we bought him a second HD, and a CD-R/RW drive. This way he'd always have enough room and not have to do something this stupid again.

Thats funny Nebro, I have listened to most of the freq's you talk about and never once heard anything that resembles a cb radio, or foul language. Perhaps you can record some of this with the people giving there call signs so you are to be taken more seriously. And any indications that they are running over 1.5 kw

Why buy an 11 meter amp??? Many companies make radios that will do 100 watts on CB. Yeasu FT-100 and the Icom 706 are good examples. Just remove a diode, reset the memory and you are off to the races. The other good thing with doing it that way is the radios will also scan the police bands and slide between channels on CB.

Just a funny story for all of you. A friend of mine got tired of CBers asking him to build amps for them back in the late 70s. So he decided to take a steel case put in a power supply and a watt meter that he had fixed up. An antenna in and out on the back and a bunch of lights. Also a couple of old tubes that would glow nicely. He was able to sell these for $500.00 a piece and everyone that got one swore that it was the best amp that they had ever used. These units were impressive to see but served no function except to make the operator look like a sucker. He has had one or two come back for repairs but no other complaints. Total cost to him in spare parts and time to build was about $50.00. I have even seen one on ebay. I guess that if you don't have the skill and knowledge to do it yourself then you shouldn't do it.

I could probably scare up any part you need for an XT. I may still have some very large 140 MB maxtor full height drives. That may or may not be the RLL capacity. When I got done with touchy cables and external cases, I went and bought a 1.2GB IDE for my 386 for $250. My latest 40GB was $99. Now an 80 can be obtained for that.

If the voltage drops on a heavy load then either the regulation has failed or your fuse is too big. When you get a new supply, test it to see just how much clean juice you can provide. When I was a kid I hooked up a bunch of light bulb sockets in parallel on a board because I didn't have a variac. If you do the same with 12 volt light bulbs you can plug them in one by one until the breaker or fuse pops, or the regulation starts to fluctuate, which ever happens first. Then you know your true maximum rating is for the supply.

>As to voltage drop and ripple, I wanted to know how much was permissible >because I will be servicing CB trancievers eventually (even if they are >just mine). I know that incorrect supply voltage will cause me grief >while testing circuits, but I don't know how much deviation from ideal is >too much.

If you can hear AC hum in the speaker or the monitor then the ripple it too high. That's about it. You usually won't see enough ripple to worry about unless the regulator fails. The cheaper power supplies will show more ripple under heavy load because of poor regulation and/or too small of an output cap. The better supplies won't show much ripple even just below the point where the breaker pops.

>To summarize, my question could have been stated as "What types of >tolerances are permissible in a supply suitable for CB radio service on >the bench?" After reading the posts, I think I'm safe with a Radio Shack >unit or similar - at least for now.

Ripple is usually so low that you don't have to worry about it. You will probably get more ripple or other fluctuations from vehicle power. If you can hear it, then it's a problem.

BTW, I have seen some "20 Amp" power supplies with transformers that were rated for less than 100 VA (or 100 watts, effectively). The ratings were obviously for peak intermittant duty, i.e, 'Bird amps'.

>more than that I agree a frequency counter would be preferred.

Yes, you need more than 4 or 5 digits. Frequency accuracy is critical for any transmitter, even CB. The reason is so that everyone is using the same freq, and so the sidebands are not drifting into another channel or band.

>> And voltage measurements are not too
>> accurate in comparison with modern digital voltmeters, mainly because

>
>Try finding a digital meter that reads that accurate at RF frequencies! =
>LOL.

Mine does, sort of. I built my RF last voltmeter to use a DVM as the meter. It's mighty accurate, and cost me less than $30. More about that later.

> On many new scopes, both analog and digital, you can find cursor =
>read-outs that takes the guess work out of reading a voltage level on =
>the screen.

True, but few will measure maximum peak, just the peaks that are triggered, and it can be triggered at any point on the wave. I also noticed on mine that if there is a low- or high-frequency signal mixed in ('fuzz'), it can either lock on the top or bottom of the fuzz, or it can go spastic. There are a lot of other things I don't like about these high-tech 'features', but I won't go into them here.

>> A scope also requires constant
>> alignment to maintain the accuracy it has.
>
>So do meters. They have an internal DC reference that can drift and age =
>just like anything you can find in a scope.

What I meant was that you need to re-calibrate just about every time
you use a scope. Most scopes will allow you to manually adjust the
horizontal and vertical gain, which is why the time and voltage
calibration adjustments are front-panel controls, as well as an
internal reference (like a 1 Vp-p, 60 Hz square wave).

>> For rough and general
>> measurements that's fine, but for the accuracy that's needed with some

>a dedicated instrument would be better.

I agree that, for applications that don't require precision, a scope
can do the job almost as well as dedicated instruments, and for some
functions even better. But for the same reason, I can't see the
justification for the expense of one of these turbo-charged scopes
when the other equipment is just as capable and less expensive. You
still need most of the other equipment anyway, such as a sig-gen,
voltmeter, impedance bridge, field-strength meter, etc. The only thing
a scope would replace would be the RF voltmeter and the distortion
analyzer. It doesn't make sense to me.

>why you see so many selling so cheaply.=20

You can build a good and accurate RF voltmeter very easily. In fact,
in a post a couple weeks or so ago I quoted a TAB book that has a
pretty decent one on page 311, and that's one that I built myself many
years ago. It uses two 2N4360, two 2N3565, a few resistors and diodes,
and a 0-1 ma meter. That's all. The book says it's good to 200 MHz but
I found it can work much higher with better diodes (1N4148 instead of

1N914). It is also quoted for signals down to 30 mV, but again, with good matching of the diodes on a bridge I got mine down to well below 1 mV. The last RF voltmeter I built was a variation on this, but I used some rather expensive diodes and FETs, some precision resistors, and also eliminated the meter circuit for use with a DVM. It works even better, and still cost less than $30 (DVM & batteries not included).

Any test equipment, even an o-scope, can be made costly when the manufacturer adds all those cute little 'features', most of which never get used. You can buy a brand new car with PS, PB, PW, AC, DC, DCC, AFL-CIO, wet-bar and pool room; but if you just want to get from point A to point B then there are still quite a few Ford Fairmonts running around; they won't go as fast, they don't look as cool, and they won't help you get laid, but they will do the job for what which they were intended.

I wasn't sure about that. My HP will only perform FFT on low freqs and reads high freqs directly.

Hopefully the transconductance of the transistors are matched in a push-pull amp. If they are, the quiescent current will be pretty close

to the same on both sides. If they are not, there is a problem.

>> And with an audio

Nothing shows 0% distortion, especially a Class D PA, so something was
obviously wrong there.

> I can also =
>show you a digital meter costing $200, with 0.1 percent RMS accurate =

Unless the meter had a differential (balanced) input, that will happen
whever the source is unbalanced, or one of the outputs is referenced
or bypassed to ground. The same thing happens with an o-scope.

>> For example, if your distortion level

It's pretty easy to tell splatter from compression and clipping, but
it takes a little practice to tell if it's from crossover distortion.
The easiest way to tell is to check the audio going to the final from
the modulator output and compare that with the distortion from the
monitor (via the RF). This I consider to be a basic procedure, even
with an o-scope.

>> > or when the output RF =3D

If you are talking amps, yes indeed that's what happens. I was talking
your typical final in an SSB CB radio. It is also a linear amp, but is
usually biased much better than a competition splatterbox. Regardless,
if bias sucks, it will show up as distortion.

>> >You will also need a scope to catch intermittent instabilities in the =

>added to a digital scope relatively cheap.=20
>=20

You will notice even infrequent pulses or spikes by turning up your
trigger level to just above the signal. The trace will blank out, but
if there is a spike or pulse the trace will flash on the screen.
That's best done with the scope set for long time intervals (1 to 0.1
sec) so you can see the trace. And I also noticed that my HP doesn't
always catch or display a spike, for whatever reason.

i need one person (or more) to try out my new cd i've prepared, I need suggestions , commments, ect..
the tittle is..."more, more, more"-- how to's , make your own antennas, how to tune radios, modifiacation to hundreds of cb and ham radios..this cd has about 100mb of info. Want to mass produce and sell, Ive been in electronics for years (novice) and really got pissed off on a cd i purchased off of ebay pertaining to the same subject.
all i got was a cd with scannned pictures of old manuals..I know every cber would find tons of information and even to the "expert" you will be amazed at what you dont know...(or forgot)
Please respond by email if you like, Ive subscribed to this newsgroup...hope to be a blessing to all
Peace out....

Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.cb,rec.radio.scanner

I just moved to Kansas City, Missouri from Atlanta, GA about two
years ago. Before departing, I bought a Uniden 148 mobile CB for my
P/U truck plus my Kenwood TH-742A Tri-Band (w/220MHz) went in
my P/U truck. And all the way they were both running as hard as my truck
was. I had a bit of a problem with my Uniden 148 recently so I took it into
R.S. to
get a repair, and while there I looked around and discovered a really nice
CB
rig with an attachment to tell me what direction I was going. That's really
nifty
because I rarely know what direction I'm going! Anyway, for a few $bucks
a bit over $100 I brought it home with me while waiting on my full-size
Uniden 48, SSB. I purchased the Uniden at a truck stop somewhere in
Arizona while I was riding around the country with my cousin in his rig.
It was a real gas to me. I can see why truckers all have radios in their
rigs. two main reasons I can see is to get local directions and keep
awake while driving their 14-plus hours a day.

Anyway, business if business. And if this is what R.S. has decided, it is
going to be an exceptional royal pain in everyone's electronics butt! And
you're most certainly right that when R.S. goes south on these items,
everyone may just as well give up most hobbies concerning radios or
electronics. You won't even be able to buy a resister or capacitor.

Roger D. Cravens, Jr., KE4YQZ
Kansas City, MO

I'll have to agree.

Maybe a more challenging odds calculation would be the one about
the Voob? ...."voobmiester having sex(with a female)"

Now that number has to be just shy of nothing. No computer
could possibly contain enough power to calculate this. At least in
our lifetime.

Sure is common, also with the Lincoln.
On the Lincoln, it has also been known to cause sudden jumps in
frequency. It can also cause the display and PLL to go out of sync with
the display showing different to the real frequency.

I know that the Lincoln one could be taken apart (carefully) and cleaned.

With the amount of e-mails flying about, I would say that most people on this group are on "friendly terms". The assholes are in the minority.

I e-mailed Twist again this week... no bounce message. So, his mailbox is still there.

Brainbuster.

==

Hi Dave.

I am not so sure that is it this time. People who have always put up
with noise and those who have enjoyed DXing seem to have disappeared.
It started shortly after legalisation, with children getting CBs for
christmas and filling the channels with music. Then the prices dropped and
everybody got one, even if they were not that interested. Foul language and
attitude joined the music, and many of the original CBers gave up.

I have not seen it this quiet since it was first legalised here, and only a
few had got them. The latest thing seems to be text messaging, although
those small charges soon add up. Others are now using the Net. Maybe
some will be back when the "text" craze slows down as people see what
it is costing, but I cannot imagine many returning.

Regards,

Peter.

==

Shouldn't be... if I named a British CBer, you would not know them.
But wait a minute...

==
> I agree, and I have seen the same attitude, too.
==

What a Troll... not only do you ask for info that would mean
nothing to you or anyone else on this group, but then we find
that you actually agree that the attitude exists.

==
> But you are still avoiding the fact that running a legal rig greatly
> reduced the likelyhood that you are causing interference.
==

No, I answered that one. Try looking, maybe through my
replies to Aagent Aaron. But then the discussion was with
him in the first place.

==
> >Wait a minute, YOU asked me questions.
> >If I ignore you, then I am running away... if I reply, then I am "trying
> >to educate you".
>
> and now your choices are limited to
==

Replying, and having you whine that I "tried to educate you",
Or
Avoiding helping you to fill the newsgroup with arguments,
and have you whine that I am "running".

Like I say, whether I reply or not, you will whine. There is absolutely
no pleasing you. You do not want a reply, you do not want to be ignored
and you are unwilling to wait for the reply that you do not really want

anyway.

You will just twist the truth to make it suit your anger and hatred.

==
> You have explained it so well
==

So, I have replied... but I thought you said that I hadn't.

==
> I don't care if you post once a week, once a month, or once a year.
==

So you keep saying, but you still keep whining when I do not reply quick enough for you. You even post a message just to say that you are waiting. Next time you whine about "waiting for a reply" we can take that as just one of your lies... if you don't really care how long it is between my posts.

==
> Don't flatter yourself: I goofed with the killfile. Got any more
> elaborate excuses that you don't have the time to write?
==

No, just a life off this newsgroup. But I really shouldn't expect a bitter, angry, lonely old man to understand that. That would be expecting too much.

Got any more unbelievable excuses why you can still reply to people in your killfile? How about more excuses why you said that you had "plonked" me, yet you still haven't done it... huh?

==
>Are you getting some coaching from Twisty?
==

Actually, I was looking at how you and Aaron reply and assuming that to be acceptable to you. But then I was forgetting, one rule for you...

Brainbuster.

==

Selective memory?
I quoted references, but what was your response?

> I don't have that particular tome

Don't you have libraries in America?
Yes Frank, that does mean getting up off your glutei.
No Frank, they do not deliver by bike... that's pizzas.

==
> That's called the ratio of AC to DC resistance, and it's actually
> 12.58 for 22 AWG copper at 27 MHz. But did you notice that for 16 AWG
> that ratio increases to 25.36? That's because the AC/DC resistance
> ratio increases with wire diameter!
==

So, the ratio has doubled... but the DC resistance is now just
1/4 of what it was.

==
> Sure, just change the length so it's no longer resonant. Are you
> suggesting that you can't tune an antenna if it has a wire diameter
> that is too large or too small?
==

That was taken from the reference I gave you and refers to radiation
resistance and length, not total impedance and diameter.

==
> You don't do justice to your reference.
==

Hey, I take the time to look at them... I don't sit moaning that I
do not have them sat around.
How do you know what "justice" was done to them, if you are
unwilling to do them the justice of reading the sections.

==
> And it's funny that you didn't mention this, but the wire
> diameter has an effect on bandwidth;
==

Shouldn't be that difficult to understand. You could have argued
that, as there are only 40 legal channels in America, bandwidth is
only a consideration to "freebanders" and "keyclowns".

==
> >Thought wrong then, nowt new there.
>
> Hablas Ingles?
==

Si, hablo Ingles.

Try a *real* English dictionary, the word is in my Collins
English Dictionary.

Collins Compact English Dictionary
New Edition
HarperCollins, 1994.

It is also in the World Book Millennium Edition, dictionary
section (English meaning).

==
> And because of that statement I have returned to demonstrate your
> willingness to obfuscate the facts.
==

You never killfiled me, just like you didn't have Randy in your killfile.
Putting me, Randy, Twistedhed, etc in your killfile would be like cutting
your heart out. You just couldn't manage without us to argue with.

But OK, let's look at some basic facts..

I said that the thickness of the wire affects efficiency.
After a bit of moaning you said:

> a whopping 1%!

Which does agree with my statement.
But, I then said that you failed to allow for skin effect in your
calculation.
So, after more whining, you revised your figure to :

> 6.2% in efficiency

Which agrees with both statements.

So it seems that we agree.

Brainbuster.

Scott,
If you post honest questions someone will give you
an honest answer. It's also a very good idea to learn
how to use the 'filters' in your browser. Once you
figure out where most of the trash comes from, and then
filter them out, it gets easier and much more enjoyable.
'Doc

(waltz time mit oompah und kraut)

We're coming, we're coming our brave little band
On the right side of temp'rance we do take our stand
We don't use tobacco because we do think
That people who use it are likely to drink

(Chorus)
Away, Away with Rum, by gum
Rum by gum, rum by gum
Away, Away with Rum by gum
It's the song of the Temperance Union.

We never drink water - they put it in gin
And one little sip and a man starts to grin
O, can you imagine a sorrier sight
Than a man drinking water and singing all nite

Chorus

We never eat corn flakes because they have malt
And we cannot imagine a much greater fault
O, can you imagine a sight that's more droll
Than a woman at breakfast slumped over her bowl

Chorus

We never drink milkshakes 'cause they're made with malt
And one little slurp makes your brain somersault

Oh can you imagine behavior so rash
As bar top gymnastics with a frothy mustache

Chorus

We never eat fruitcake because it has rum
And one tiny bite turns a man to a bum
Oh can you imagine the pitiful plight
Of a man eating fruitcake until he gets tight

Chorus

A man who eats fruitcake lives a terrible life
He's mean to his children and beats on his wife
A man who eats fruitcake dies a terrible death
With the odor of raisins and rum on his breath

Chorus

We never eat cookies because they have yeast
And one tiny bite turns a man to a beast
Oh can you imagine the utter disgrace
Of a man in the gutter with crumbs on his face.

Chorus

We never eat peaches because they ferment
And a peach will ferment at the least little dent
Oh, can you imagine a sight more obscene
Than a man getting tipsy on peaches and cream

Chorus

We never use Brylcream 'cause that's got bay rum
And too many rubbings can make your head numb
But if there's a thought that will leave you in fits
Just imagine the millions of paralyzed nits.

Chorus

>So, the ratio has doubled... but the DC resistance is now just
>1/4 of what it was.

And I demonstated that all are insignificant for a CB antenna when
compared with the polarity losses of a helical dummy load. Are you
having problems reading the numbers? Don't worry, Timmy is having the
same problems. He can't remember if he's 22 or 42 years old.

>==
>> Sure, just change the length so it's no longer resonant. Are you
>> suggesting that you can't tune an antenna if it has a wire diameter
>> that is too large or too small?
>==

Oh, I'll read them eventually. In the meantime would it hurt your
position to quote your own reference?

>==
>> And it's funny that you didn't mention this, but the wire
>> diameter has an effect on bandwidth;
>==
>
>Shouldn't be that difficult to understand. You could have argued
>that, as there are only 40 legal channels in America, bandwidth is
>only a consideration to "freebanders" and "keyclowns".

Why? That isn't even related to the discussion. Regardless, you are
wrong again, brain. Bandwidth IS a consideration of legal CBers. Only
a very lossy antenna will get 1:1 SWR on all 40 channels. Usually you
tune it for the center of the band, but some tune it for the channel
they use most.

>section (English meaning).

'nowt'? That's interesting, it's a variation of 'nought' from a
dielect of English. So your line was really:

>Thought wrong then, nought new there.

Well, that make a -little- more sense. Maybe if we put it in context
it will become clear. I said:

>Not until you show the figures that demonstrate that skin effect makes
>a significant difference. Of course that will never happen, just like
>it will never happen that you will put up numbers showing a
>significant difference in the efficiency of these antennas due to the
>wire size, or due to polarity losses, dielectric losses, etc.
>.....
>...or maybe you can calculate the difference in the resistance of a
>wire at DC and 27MHz, and therefore show why it's significant, eh?
>Yeah, I didn't think so.

To which you effectively responded:

>Thought wrong then, nought new there.

Well, you never did "show the figures that demonstrate that skin
effect makes a significant difference" with the efficiency of a CB
antenna, and you never did "calculate the difference in the resistance
of a wire at DC and 27 MHz". So I DIDN'T think wrong, brain. You just
screwed up AGAIN!

>==
>> And because of that statement I have returned to demonstrate your
>> willingness to obfuscate the facts.
>==
>
>You never killfiled me, just like you didn't have Randy in your killfile.
>Putting me, Randy, Twistedhed, etc in your killfile would be like cutting
>your heart out. You just couldn't manage without us to argue with.

Like I said before, don't flatter yourself -- I goofed setting up the
killfile the first time.

>But OK, let's look at some basic facts..
>
>I said that the thickness of the wire affects efficiency.

No, you said, "And the wire up the centre is usuaully thin, which does
not help with the efficiency of the antenna." But the wire is -not-
"usually thin". The differences in sizes of wires in fiberglass
antennas have little or nothing to do with the efficiency, because as
I pointed out several times -- and you ignored each time -- is that
many fiberglass antennas use rather thick wire! Sometimes even 16 AWG!
Why do you think I used that figure in my calculations?

>After a bit of moaning you said:
>
> > a whopping 1%!

>Which does agree with my statement.
>But, I then said that you failed to allow for skin effect in your
>calculation.
>So, after more whining, you revised your figure to :
>
> > 6.2% in efficiency

Moaning? Whining? I went where you feared to tread: Mathematicland.
But you still ignored the point that this difference in efficiency
works -against- your argument just as much as it works in its favor.

>Which agrees with both statements.

Except for the part about the wire in a fiberglass antenna being 'thin
enough' to cause a reduced efficiency. Matter of fact, isn't that what
you said in the first place? I think is was! And I even think I quoted
it just a few lines above!

>So it seems that we agree.

Not even close, brain. You were talking BS and I pointed it out. You
can deny it all you want, bring up every excuse in the book (even
one's you refuse to quote), and snip the relavent parts from my posts,
but you were still wrong.

But I'm going to give you a chance to redeem yourself, brain. In case
you didn't notice, many CB antennas are not copper inside fiberglass,
but stainless steel whips. Now the skin resistance for stainless steel
is different than that of copper, so maybe your book can tell if it's
greater than or less than the skin resistance of copper at 27 MHz.
Then show the math that calculates the difference in skin resistance
of a 1/4 wave stainless steel whip compared to a 1/4 wave of 16 AWG
copper. It shouldn't be THAT hard because I have done half the work
for you already! And as you can see from my post, the math isn't
really that hard, even for a grade-schooler.

Give it a try, brain!

My opinion is this: If you're going to run an amp, please do so cleanly,
don't overdrive it, keep the modulation close to 100% without going over,
and keep it on "low".

The V model is kindof a waste, and I'd not spend the money on the 500...
The 250 should be plenty to get down the street and talk around the truck stop.

Of course, I don't run an amp, I don't need an amp, and I don't suggest
running one either... Work on your antenna system instead, get it more
efficient, and you'll see much more drastic gains.. Wilson Silver-Loads are
great antennas for the money. don't be fooled by the hype of the "oil can"
and "coil over" antennas.. they're really not worth the money.

Ken:

Go to Radio Shack. Get the Gordon West book. It's $8.95 last time I checked. Study the questions by going through the book the first time with a highlighter. Highlight EVERY question, ONLY the CORRECT answer for every question, and the explanation for every question.

Then read through the book again... reading ONLY the highlighted parts of every question. Don't worry about the incorrect answers, just read the correct ones, and the explanations of WHY they're correct.

You should be ready for a VE session in under a week if you study for 30 minutes every day.

If you can't find "Now You're Talking", this is a good solution. Good luck on the test, and let us know when you get your callsign. There's IRLP and ILinked repeaters in the NYC area that we could pop into and say howdy to ya.

Unless you're not putting out the 4 watts Uniden claims the radio will do, don't mess with it.. Just get a good mike and improve your antenna system (better coax, better antenna, etc), and you'll "get out" better.

Truckstop RG-8 mini isn't "good coax".. get the good stuff from a HAM radio store. DON'T buy the RG-8 from Radio Shack.. it REALLY sucks.

Hi there, yes they seem to be all the same the audio go's in on pin 1 shield
on pin2 the transmit is on pin 3 and the receive is on pin 4 if you can't
get it with this info I'll have to try something else ok?

Turning up the radio will only be noticed by your watt meter. You will never get enough out for anyone else to notice. A properly adjusted radio into a small box will work better and be more reliable. Just remember that AM requires 4 times more power at full modulation then is required for a dead key. IOW, 25 watts dead key should show 100 watts on a peak meter. Competition boxes always sound bad.

Hello,
I have the above unit and when I got it second hand, the squelch was
dis-connected to put variable power in it's place.
I would like to put it back to stock, but can not figure out where to run the
wires for the squelch. This unit appears to be identicle to the 148GTL.
If someone can give me some direction on where to locate the wires.
I will need board locations and and squelch knob connections.
I know this is asking alot, but it drives me nuts with no squelch.
Please e-mail me direct at tramd300@aol.com

Thank you in advance...

Sorry Dick, but illegal use of 11m amplifiers, and freebanding is not an addiction. And if it were there are plenty of 12 step programs that prove very effective at fixing the problem.

>Can someone tell me how to put talk back in a uniden pc-122xl

This worked on my older version...
Run a jumper wire from pin 2 (audio) to D-39 and cut the resistor to the rear of D-39, not sure of the resistor number, but if you would let me know the number so I can put it in my notes.
Let me know how it works out on your rig.
Hope this helps...

** Don't shake my tree if you don't like what comes down**
Life is too short... Enjoy the ride...

http://shorty.mudcat.org/!!-song99.cfm?stuff=fall99+D+11484055

THE SONG OF THE TEMPERANCE UNION

We're coming, we're coming, our brave little band
On the right side of temp'rance we do take our stand.
We don't use tobacco, because we do think
That the people who use it are likely to drink

Away, away, with rum, by gum,
Rum by gum, rum by gum
Away, away, with rum, by gum,
The song of the Temperance Union.

We never eat fruitcake because it has rum,
And one little slice puts a man on the bum.
Oh, can you imagine the pitiful plight
Of a man eating fruitcake until he gets tight?

A man who eats fruitcake lives a terrible life.
He's mean to his children and beats on his wife.
A man who eats fruitcake dies a terrible death,
With the odor of raisins and rum on his breath!

We never eat cookies because they have yeast,
And one little bite turns a man to a beast.
Oh, can you imagine the utter disgrace
Of a man in the gutter with crumbs on his face?

We never drink water -- they put it in gin,
And one little sip and a man starts to grin.
Oh, can you imagine a sorrier sight
Than a man drinking water and singing all night?

We never eat peaches because they ferment,
And a peach will ferment at the least little dent.
Oh, can you imagine a sight more obscene,
Than a man getting tipsy on peaches and cream!

Beware of plum pudding, the kind that they light.
They drench it in brandy so it will ignite.
The thought is revolting to temperate folk,
For people go blotto inhaling the smoke.

We never touch coffee; it makes our eyes gleam,
At least when they add Irish whiskey and cream.
Oh, can you imagine a fate more unkind

Than sluggin' down coffee and going stone blind?

We never drink milkshakes 'cause they're made with malt,
And one little slurp makes your brain somersalt.
Oh, can you imagine behavior so rash
As bartop gymnastics with a frothy mustache

We never play jumprope 'cause jumpers take hops,
And once they start hopping, they hops 'til they drops.
This vile degradation starts out as a game
And grammar school innocence turns into shame.

We never have backrubs because it's a crime,
And we will oppose them in song and in rhyme.
For an alcohol backrub is worse than straight gin
When you think of the liquor absorbed through the skin.

We never use Brylcream 'cause that's got bay rum,
And too many rubbings can turn your head numb,
But if there's a thought that'll leave you in fits,
Just imagine the millions of paralytic nits.

Now if you go hiking and get sores on your feet,
Don't use rubbing spirits as a means for to treat,
'Cause it seeps through the pores of your feet by osmosis,
And you end up by having ten drunk little toesis.

We never eat cornflakes because they have malt,
And we can't imagine a much greater fault.
Oh, can you imagine a sight that's more droll
Than a woman at breakfast slumped over her bowl!

We never dance Morris -- you have to drink ale,
And respectable people, who see us, turn pale.
Oh, can you imagine the staggering sight
Of a man who drinks ale, dancing ``Saturday Night?''

Thanks. for ruining a perfectly good radio. What's next, turn
every pot to get 10 watts out of it. You'll lose your modulation
and wonder why it gets so hot...

...notes from a longtime 122 user. I'd abused mine in the late 80's.
Stuck it in a box for 10 years. Found a tech who could really fix it.
I have not removed the screws from it since. He put it back to stock,
(minus the 12V final jumper, too much current draw on AM for the reg.)
tuned and aligned it to factory specs. Run the radio like it should
and it will last and sound good. Butcher it and it will break. The
proper mods were on Handy Andy's website, which is gone now. I'm glad
I saved a copy of it on my hard drive.

(If you need talkback, you're probably using a stupid echo mike...)

While a properly biased amplifier will be more "hamonic friendly", the bias has nothing to do with the cleaness of the audio that emerges. Proper drive has everything to do with it. Any amplifier that is operated in the "compression" area due to over driving will distort the audio content.

That's why I suggested to use the amp on low. Bill E. will argue that the swamping resistance will keep the peak down as well as DK, but that keeps the signal in the linear portion of the devices. I still say that there is no real difference in range between a 2 pill and a 4 pill box.

So that would mean that you would have to turn your CB off every time you have someone in your car and couldn't set up a base in any place in your house ware you could listen to it for incoming calls including emergencies while doing other things. A CB is of no use if it is not turned on.

why not answer the question? any plans at all of upgrading your ticket or is the entry level position still good enough? by your previous comment of working a "band opening" on 6 meters its obvious your interested in working the world via dx so why not just pass the very basic 5wpm test and enjoy it full blast? surely 5wpm isnt too hard for you. many children are beating this out on keys for merit badges everyday so it shouldnt be too much for an egineer like yourself

It's very hard to find the exact post you're responding to when you do a copy,
then log out of one ISP to log on to another to paste the filth in the post.

ROTFLMAO! Ever hear an AM signal amplified by a Class C amp? The more
into Class C you get the worse it sounds! Geez, Brain, haven't you
learned that much yet? Or are you still hanging onto your voodoo
theory that "linearity is not required for AM"?

> Proper drive
>has everything to do with it. Any amplifier that is operated in the
>"compression" area due to over driving will distort the audio content.

That's called 'clipping', not 'compression', and it can be either
'hard' or 'soft'. Both will distort your audio, but hard clipping will
be much more noticable in both the audio and the harmonics.

Talkback-

I have a little trick that you could add to your radios

.....it's to put talkback IN a radio....if you run a wire from the
positive (+) side of the speaker inside the radio
put a 100ohm resistor inline and solder it to the top
of the audio transformer (small transformer) it will give
you a pretty good sounding talkback....I've tested this in
lots of radios and it didn't work in an old crystal type radio that
used a relay...but it did work in the other bunch
...the resistor size may vary from radio to radio.... use varible with
100-150ohm
in line may give you a more persice measurement, (use ohm meter.)
insert resister that you read with the talk-back you like..even use o switch
on
radio (I like using the channel 19, or channel 9 quick switch)
be sure to put the wires for regular selection together, clip and tape off
the others,
usually three other wires...or the PA switch (who uses it anyways)
I always use the switch, Sometimes I don't want to announce to the world
what
I says man...10-4 ?

If it's doing the legal max of 4 watts, leave it alone. Not just because it's illegal, but because you won't notice the difference. As pointed out in another post, it takes four times the power to double your range, and that's assuming you are talking across a wide-open field with no ground losses. But your radio isn't capable of quadrupling its power, you would be lucky if you could even double it.

Much better gain can be had using a better antenna. A 102" whip mounted on the roof is about the best you can get from a mobile, but you will be hitting a few bridges as you drive. Mount it on the bumper and you shouldn't have any problems.

If you still want more power then use the 12 watts available with SSB, which is kind of misleading because each watt of SSB is equal to about 6 watts of AM. But avoid the amps with your CB radio: not only are they illegal (that law is poorly enforced by the FCC, but the fines are typically several thousand dollars if you do get popped), but most of them are poorly designed and cause splatter on other channels and/or harmonics that can be heard on televisions and cordless phones. And most of these amps have been abused to the point to where they work worse than they did when they were brand new. If legal CB radio just isn't enough power for you, it's really easy to get a license for amateur radio.

Yes......the easiest way to tune that radio is by using a tx 1600
type mod or something similar. This mod requires no internal
adjustments and requires no special skills. It has worked successfully
for years and will continue to do so.

Just because you never experienced any problems doesn't mean that the product is good. Pyramid has its own niche market as "budget" type equipment. They are not very reliable units as a rule. But this is not so surprising... you normally get what you pay for.

You sir are incorrect on all counts.
The fact remains that I can take a class "C" amplifier and with proper AM drive can get sparkly clean audio. Now the harmonics will probably not be up to your standards but you can't hear harmonics if you are receiving on the frequency you are transmitting on. As for the topic of "compression", this is a widely known concept in RF amplifiers. I suggest you refer to Radio Frequency Transistors - Principles and Practical Applications by Norm Dye and Helge Granberg. This text will certainly show you the error of your ways... unless you want to tell us that these Motorola authors are practicing voodoo witchdoctors in their spare time.

Yes, indeedy, friends and fans. There were a lot of verses to go. I did not know the Chad Mitchell Trio did it and Theodore Bickel did everything at least once, so go looking for old records. I would not be surprised if Oscar Brand did not do it; his was the only recording I know of of the Bastard King of England or why Kipling was not poet laureate til Vicky keeled over.

While we are reliving our lost youth, we are all familiar with Foghorn Leghorn (lifted from Senator Claghorn on the old Fred Allen Show before anyone's time) and doo-dah, doo-dah. In my younger days when someone would get a little noid over what is really a pretty obscure issue someone would punctuate his rant with 'Doo-dah, Doo-dah and deliver the gentle hint that the orator might (as Lincoln said of General Hooker) have his headquarters and hind quarters confused.

This led to all sorts of parodies on the pretentious and stuffy including the Doo-Dah parade in Pasadena with such wonderment as briefcase drill teams and folding chair bands. Hell of an improvement on the Tournament of Roses.

Take the hint, Aaronia, Doo-dah, Doo-dah!

The gung-ho shall inherit the earth; they deserve to.

Dick, NBK
aka the Velvet Codpiece, tell no little lies!

The level of distortion depends largely on the device, where it is
operated on its curve, and how far into Class C it is run. With vacuum
tubes it also depends on whether one (properly) uses grid leak bias to
square up the input waveform in the interest of efficiency.

But no matter how clear the audio may appear to be, the resulting
modulation percentage will and has to be lower than the input signal and
rather substantially in the case of bipolar transistors.

If the object of the exercise is to transmit the sidebands that actually
do the work, then Class C is assinine. If the object is to do a
smoke-and-mirror job on some non-technical types and make meters bounce
then by all means use Class C.

And those harmonics on frequencies far removed from where you are
listening do wonders for meters and not a blessed thing for communication.
Hells Bells, overmodulate and splatter into the neighboring channels while
we are at it; that does not a blessed thing for communication either but
the meter readings are loverly.

Can we bury Class C 'linears' and call them the junk that they really
are???

Dick N&#65533;BK

Bullshit. Have you totally forgotten about our little discussions of
what happens to the audio when the modulation pushes the signal below
cutoff? Or are you still claiming that your ground-biased Class C amps
are so close to Class B that you can't tell the difference? If so,
have you also forgotten the our discussions (and mathematical
demonstrations) about the impedance transformation on the base that
puts them higher into Class C than you claimed? Or are you still
claiming that the flywheel effect will take care of any distortion,
totally forgetting that the flywheel effect only works with a tuned
output network, which your Class 'whatever' amp doesn't have?

"Sparkly clean audio" my ass...

> Now the harmonics will probably not be up
>to your standards

They won't be up to my standards, industry standards, FCC standards,
or the standards of interference tolerated by your neighbors.

> but you can't hear harmonics if you are receiving on the
>frequency you are transmitting on.

So you found a method to limit the modulation so the output doesn't
drop below cutoff? Would that method be to turn down the modulation on
your radio to about 50%? Is that what you mean by "proper AM drive"?
That's just a kludge to compensate for piss-poor engineering.

> As for the topic of "compression", this
>is a widely known concept in RF amplifiers. I suggest you refer to Radio
>Frequency Transistors - Principles and Practical Applications by Norm Dye
>and Helge Granberg. This text will certainly show you the error of your
>ways... unless you want to tell us that these Motorola authors are
>practicing voodoo witchdoctors in their spare time.

Yes, the poorly chosen term 'compression' is a widely known topic in
the RF world, but you just can't read what's in front of your face.
Their definition of 'compression' is running the transistor into
saturation or near saturation. The result is a squaring of the sine
wave. It increases the efficiency of the amp, but it's not quite
linear, is it Brian? And this 'compression' to which you are referring

is ALWAYS tuned and filtered. For tube finals that's usually a tank, and for transistors it is typically a modified L network. The more non-linear the amp, the higher Q you need in your output network, and that means a very narrow bandwidth. That's how it's been done with Class C finals since they were invented. And you can't do it with a broadband transformer.

In other words, you can't get wideband linear response from a non-linear amplifier, and your references never make such a claim. Try reading them with a little more concentration next time.

You sir need to learn some more theory. A class "C" amplifier is
biased beyond cut off. Class "C" by definition is non-linear. The
output is NOT a replication of the input. The amp is NOT operating
over the linear portion of the curve. Feeding an AM signal into a
class "C" amp WILL give distortion on the output.

The channel 6 mentality! I like the way they sound just as good on 36
as they do on 6. The S meter goes highest on 6. If they could only
imagine what they could accomplish if all those bird watts were on
one channel. What good is 3000 watts if your only putting 1000 on 6?

Be prepared for some HEAVY current draw with that model.

I would go with one of these:
http://www.texasstar.com/CW.html
There is not much difference in range or signal strength between the units
on this page, so using the 250 is easier on a stock electrical system.

3185. Wilson 5000 Mobile Antenna?

Newsgroup: rec.radio.cb
Date: 2002-08-05 05:43:53 UTC
From: SharksTooth2@webtv.net
Message-ID: <15175-3D4E1099-689@storefull-2172.public.lawson.webtv.net>
Source record: 132220

Is the Wilson 5000 magnetic mount mobile cb antenna the best one to buy for reception when placed on the roof of a car? Aren't all cbs the same as far as watts (4 watts I believe), so no 1 outperforms the other. If I'm wrong how do you add wattage power to the cb? Its all in the antenna right? I wan't the best in reception regardess of price. I live in a Delaware where it is very flat. Not a lot of highways in the area, so not too many 18 wheelers. I wan't to use it mostly in case of car trouble, so I can contact a cop for assistance. Are the cops on channel 9?

Message-ID: <cr4sku0lf4ga5j0g1qd75qnpnu9iigkrll@4ax.com>
Source record: 132217

Gee, that's kinda hard, considering that all CBs have an audio
response roll-off of about 2500-3000 Hz. So your desired freq. would
never even get through the rig's audio chain; at best it would be
severely attenuated.

For a standard RB circuit, we have a freebie schematic you can print
at:

www.cbcintl.cob/rb_schem.htm

> turned on.
>

No...Look. I don't have to turn off my radio everytime somebody is in my car. However, if somebody is in my car that is offended by strong language I don't make them listen to it - simple as that. Hey, my wife doesn't like Jimi Hendrix so I don't listen to him while we're in the car together. I don't like Eminem, so she deosn't play that while I'm in the car either.

As to listening in my home, I don't have a base unit.

Listen, I know there's alot of garbage on the radio. I wish it wasn't there. Still, there is alot of good, too. Like that trucker mentioned earlier - he took a bad situation "...but you can't get a bear report" and made a funny joke about it. I myself can tolerate the language. If I grow tired of it, I just shut the radio off or change channels. I'm not going to quit listening to CB over it. Maybe others will, I don't know.

I hope that clarifies things. Do you see where I'm coming from?

Fellow CBers,

I posted this earlier but looks like for some reason it was deleted, telling me the message is no longer available. Anyhow here we go again! :)

I have a friend of mine who is looking for an Astatic Mobile Max but don't want to pay $80.00+ for a brand new one. Does anyone know where I might find a used one. I saw one on ebay a while back, but I was not quick enough with the bid. I bid 35.00, it went for 36.50! I am willing to pay $50 or lower, depending on the condition of the unit.

Thank you ever so much for your time!

Michigan Moonlite :)

yeti@REMOVEcet.com wrote:
> <snipped>

It's obvious that you and I share different opinions on how to get the job done.

I can't, for the life of me, figure out how you could trust "indicators" over the ability to actually 'see' the waveform. I agree that for the most accurate measurement, there are dedicated pieces of gear that are better suited for certain tasks. But I just cannot fathom how you could set modulation percentage, for instance, on a wattmeter, and distortion analyzer, without actually seeing the waveform. You have no way of knowing what's going on other than a meter that tells you that "all is not right", but not what it is that's wrong. A distortion analyzer can tell you that you have X% distortion, but not why. The ability to see the waveform, will clue you in to the cause.

Other than frequency, there is really no need to have absolute precision or accuracy in the CB repair field. A scope can be your best friend when looking into "the innards". A meter can only show you the magnitude of a reading. It cannot show you symmetry.

I guess it all falls back on your background. I've been a Technician/Engineer for a fairly large company for close to 20 years now. I'm used to using high end test equipment to make the best measurements. I've used distortion analyzers, modulation analyzers, network analyzers, scopes, noise figure bridges, freq. counters, etc etc, most of which cost more than the home I live in. But yet, when it comes down to doing simple troubleshooting, I find the equipment easiest to use are VOM's and scopes. There is nothing radio related, that I can't diagnose with these two simple pieces of equipment. CB radios are relatively simple devices, that fail in a predictable fashion. It's rare that I would have a problem that would require the specialized functions of a distortion analyzer, of any of the other high end specialty equipment that I use in my day job.

I can count many times the signal tracing that sometimes needs to be done, to find a weak audio gain stage (Maybe a dried out cap?), that the scope pinpointed the exact place where the problem occured. Sure, you could find some old meter that reads AC voltage, and do a similar thing, but again, you're only looking at a meter, and not at the waveform itself, and many times that extra ability is helpful. I had a leaky cap once in an op amp circuit, where it drug the DC on the input down (It usually floats at half the B+) enough where the top half of the waveform clipped, but the bottom half was ok. Gain was ok at lower volume levels, but it noticably distorted at higher levels. A distortion meter would

have quantified the distortion, but not given a clue as to the cause. The scope told me right away what I was dealing with. It was only a matter of back tracing each stage until I found the bad one.

I never find changing voltage ranges or timebase settings to be cumbersome. It's all part of understanding your instrument. And while I would not try to use a scope to make the type of quantitative measurements better suited for specialized equipment, it does multi-task well enough for most applications, to at least clue you in to problems. It is versatile enough to justify the cost IMHO.

I think we both presented our sides to this issue. Let the person who is starting out decide which is the better instrument for him, and go from there....

Let's see, I have a schematic here for a circuit that uses an oscillator to charge a capacitor to send a 4800V pulse to light up a zenon gas discharge bulb for 10 ms. That should really "light up" those audio circuits. Oh wait, you said 4800 Hz. Never mind.....

Source record: 132227

Wilson Antenna's are the best in my opinion. I have a Wilson 500, not 5000, and i've talked skip all over. Not all cb's are the same...you've got the Galaxy radio's that can be tuned up to swing around 25 to 30 watts. But lets say u just want a little Uniden Pro510XL, thos u can get around 8 to 12 watts out of. The cops do NOT stand by on channel 9. but in some states Emergency stations monitor channel 9.....like FL....have a great day

So, now YOU make the "law" Aanal Aaron? I don't think so!

The Notice you posted simply states that further "importing and marketing" of new radios is prohibited. NOWHERE does it say that all the existing radios, brought in before the Notice, are suddenly "illegal". They couldn't (and didn't) do that with cell-capable scanners and they can't (and won't) do that with 10 metre radios. Simply put, they cannot make a change like that retroactive.

You lose. And I bet you won't bother to check with the FCC to see that you're wrong, will you? Of course not; you'd then have to admit that you don't have a clue.

As for your "beat", I always thought this was a family-oriented newsgroup; most of us don't care about your one-handed sex life!

Actually, I didn't need to go to the Ham Radio Outlet Store. Their online catalog lists 10 meter radios with 'Roger Beep' capability. The catalog has RCI-2950DX and Magnum 257DX and 357DX.

Thanks for your help AV, I never thought of looking at HRO, I will be placing my order this week.

Richard, the phoney "10 meter radios" are illegal to sell, period. I have posted a number of actual FCC-issued documents to prove my point. You have posted nothing but ridiculous excuses and made-up loopholes with nothing at all to back them up. It's pretty clear to anyone reading this that you are a potential source of "CB myths".

Up to a point, yes. Probably not a bad idea on the Tech, but later exams
are a bit different.

Normally I suggest doing the code in parallel with the writtens but I can
see where one might not wish to be the last casualty of the no-code wars.
There are a few problems with this approach, however:

a) While it sure looks like the definition of an Amateur will be changed
next year so as to be codeless, this is the third meeting where the issue
has come up and it was deferred twice before. The issue is considered so
unimportant that one objection will scuttle it again. (It is not a done
deal by any means.

b) It is part of the art of Amateur Radio and in more concrete terms is
about the only way to get close to 100 of the DXCC countries. It is not
going away anytime soon nor will the phone bands be expanded into
narrow-band territory for reasons having more to do with international
relations than the code wars.

c) Whether one considers the no-code a victory or defeat, you are going to
encounter people who are not the cuddly grandfather types you meet here.
You might well, depending on how it plays out, find it far better socially
to be the last of the dittyboppers rather than the first of the nocodes.
The view is different from the back side of the hill.

Use your own judgement as I am confident you will but watch your assumptions.

Good luck whatever.

Dick N&#65533;BK

3216. Van SWR can be lower?

Newsgroup: rec.radio.cb
Date: 2002-08-05 21:25:16 UTC
From: rcmiszuk@yahoo.com
Message-ID: <45c6ea5d.0208051325.60e2d03@posting.google.com>
Source record: 132245

I just installed a dome mount on my 15-passenger van on the roof. It's located in the center, a few inches back from the windshield. On it I have a 3ft Firestik.

I can only get SWR's of 2.0 on channels 1 and 40, and SWR of 1.3 on channel 19.

On the underside of the roof I sanded the paint away to give good metal contact to the mount. Checked the cable and such with a multimeter, there is continuity where there should be and no continuity where there shouldn't be.

Should I expect lower SWR's? I figured with that huge rooftop I'd have better SWR's.

Thanks.

Bob.

I totally understand ware you are coming from but most people won't. That is the trouble. It reminds me of a trip I was on in about 1980. I had my mother in the cab of the truck and my sister in the camper. We got into a convoy of trucks and the comments about my mom and sister were so bad that my dad pulled the radio out of the truck at the next stop. I did get a new base out of it when we got home of course.

> said your more interested in showing "how much better hams are than cb'ers"

What he will learn, when he gets busted and paying that $7500 fine, that the FCC is not the toothless tiger that many of you pirate CBer's make the FCC out to be, where enforcement issues are concerned. And getting busted for illegal equipment and operations is just that - getting busted for illegal equipment and operations, not a Ham v.s. CBer issue as you so dearly wish it to be. What you really hate is a few of us seem to have a few more morals than you do, and have no desire to do anything to further encourage illegal activities. If that includes NOT giving any advice, so be it.

> than you are helping solve the problem of rfi. its clear as day to everybody
> but yourself.

I have no more desire to help somebody to better break the law, whether it be Part 95, or an armed robber contemplating a felony mugging.

what your seeing is perfectly ok and normal with a 3 foot antenna. you'd be better off in all ways with a wilson 1000 up there. a swr of 2.0 is very acceptable and wont cause any trouble.

Those stupid meeting have saved the life of many people who had the courage to admit they had a problem, and were willing to do whatever was needed to save themselves. For the alcoholic and drug addicted there are only three out comes, sobriety, insanity, or death. And I have friends, with family members etc., that fit all of those later three categories.

Your grounding is fine, but your ground-plane sounds lopsided. I'll
bet that if you had mounted the antenna closer to the center of the
van that your SWR would be much lower. But for all practical purposes
your SWR is still ok.

I, on the other hand, can't fathom trusting measurements which amount
to little more than subjective interpretation. Most of the other
equipment I mentioned is needed anyway, so the only difference here is
using an RF voltmeter and distortion analyzer in place of an o-scope.
Of course there are advantages and disadvantages for each, but in my
shop the advantages of an oscilliscope are quickly outweighed by the
advantages of an RF voltmeter and a distortion analyzer.

As far as an o-scope 'cluing you in' to a cause of distortion, the
best clues can be found just by listening to the monitor.

>Other than frequency, there is really no need to have absolute precision
>or accuracy in the CB repair field. A scope can be your best friend when
>looking into "the innards". A meter can only show you the magnitude of a
>reading. It cannot show you symmetry.

Again, lack of symmetry = distortion. Symmetry is only important in
the audio stages and in the output signal, and any asymmetry will
manifest itself in the received audio. By simply testing the
distortion at the output of the modulator you can determine if the
problem is in the modulation stage or the audio. Matter of fact, since
most radios use the modulator for the received audio, if the
distortion is in the audio stages it will appear on receive. And like
you said, precision isn't that important with CB radio, so if you

can't hear it, a little bit of asymmetry doesn't really matter.

Regardless, an RF voltmeter can indeed show you asymmetry, because it measures only half of the wave. Flip the polarity switch and it reads the other half. You can read them for both peak and RMS, and you will have a pretty good idea of symmetry.

A perfect example is sitting on my bench right now. I'm rebiasing a preamp (6SL7 Class A push-pull). The best symmetry I can get with a scope leaves about 8% distortion. Using the RF voltmeter (which works just as well for audio) I can get it down to 1%, which is about the best this amp will do (actually, I got it down to 0.4% using the distortion analyzer).

>relatively simple devices, that fail in a predictable fashion. It's rare
>that I would have a problem that would require the specialized functions
>of a distortion analyzer, of any of the other high end specialty
>equipment that I use in my day job.

I have worked for a couple large companies for a few years, but mostly I have worked in small shops or on my own. I got into RF when I was very young, and didn't have the money for an o-scope. My mentor (an old man that repaired speakers out of his garage) taught me that you don't need a scope if you know how to use what you have available. He also helped me build my first pieces of test equipment. When I finally got my first o-scope (an Eico 460 that I still have), I thought that I wouldn't need any of that other equipment anymore. But I was very wrong. As it turned out, the only thing the scope was used for was for TV repair and to design better test equipment!

Nowdays I work at a couple radio stations as well as my own shop. I use high-end equipment when the need arises, and that happens a lot in a studio environment. I still use my comm monitor, my spectrum analyzer and my high-end o-scope. But I don't make money on CB radios, but I will fix them as a favor for a regular customer. And I'm not going to waste much time on them so I use the quickest, easiest way to get the job done. That way doesn't include the o-scope because it's much quicker and easier to use the equipment that's designed for the job.

>I can count many times the signal tracing that sometimes needs to be

>have quantified the distortion, but not given a clue as to the cause.
>The scope told me right away what I was dealing with. It was only a
>matter of back tracing each stage until I found the bad one.

Backtracing is basic procedure with or without a scope. Listening to
the audio while tracing the stages with a signal injector would have
done the job just as well. And there are reasons they put DC voltage
potentials on schematic diagrams. If the schematic says the input to
an audio stage should be X.X volts, it's a fair bet that if it isn't
X.X volts then something is wrong.

>I never find changing voltage ranges or timebase settings to be
>cumbersome. It's all part of understanding your instrument. And while I
>would not try to use a scope to make the type of quantitative
>measurements better suited for specialized equipment, it does multi-task
>well enough for most applications, to at least clue you in to problems.
>It is versatile enough to justify the cost IMHO.

My opinion comes from a much different 20 years of experience than you
had. I learned, and was taught, to use the right tool for the job. If
you want to measure resistance, use an ohmmeter. If you want to
analyze audio distortion, use an audio distortion analyzer. If you
want to measure RF voltages, use an RF voltmeter. Etc, etc.

But to put things in perspective, radio isn't so complicated that you
need an o-scope to get a clue, not like looking at a television signal
with its multitude of components like luminance levels, chrominance
clusters, audio sub-carriers, and sync, blanking, equalizing and
colorburst pulses. You MUST see that pedestal with the front and back
porch! But with CB radio all you have is an RF sine wave and some
audio. BFD! You don't need a scope for THAT!

>I think we both presented our sides to this issue. Let the person who is
>starting out decide which is the better instrument for him, and go from
>there....

Yeah, well, experience can be a very good teacher but the student must
be willing to learn.

A "small" antenna "averages out to a fairly narrow band width"? How do
you figure?

> that later.

I read that part. Interesting, however that circuit does nothing more than measure the value of a "known waveform". If the RF waveform in question is not the assumed one for calibration purposes then the reading is totally useless. I mentioned a True RMS reading meter in my post. These meters use some form of thermal conversion technique - such as a thermal couple bonded to a heating element in a evacuated glass bulb, or performs the calculation using analog methods - such as using multiplier circuits to perform the squaring and square root operations, or in digital form - the waveform is digitized and then the RMS calculation is done in software.

I will admit if all that is required is the measurement of a known wavform, such as a sine wave, then your suggestion works.

I think if you worked on your scope "technique" a bit you could find a way to solve the problem.

> There are a lot of other things I don't like about
> these high-tech 'features', but I won't go into them here.

I find that the tech's, where I work, that hate the high-tech "features" is due to lack of understanding how to use them PROPERLY. There is nothing worst then trying to use a function of any instrument for a measurement operation it was not designed to handle. However once they understand how the "feature" works many can't live without, and will complain when they can't use the scope with all the bells and whistles on it.

> internal reference (like a 1 Vp-p, 60 Hz square wave).

You really have to be kidding me here! You have something against adjusting the vertical gain setting and horizontal time base? Its not any different than changing ranges on a DVM. As far as "compensating" the scope probe, which is not calibrating it so to speak, a good tech does the first thing when they flip on the scope. So long as the probes don't change on the scope its a few minute once a day chore. No big deal. Now if you got problems getting a waveform to display on the screen many new scopes have a button normally labeled "setup", which when pressed automatically adjusts the vertical gain and horizontal time base for you. It takes all of a second or two. Then you can fine tune what you see with a quick change of either control.

As some of the other posters have pointed out the "other equipment" may not be so cheap compaired to a good scope.

> You
> still need most of the other equipment anyway, such as a sig-gen,
> voltmeter, impedance bridge, field-strength meter, etc. The only thing
> a scope would replace would be the RF voltmeter and the distortion
> analyzer. It doesn't make sense to me.

Well that's up to you. Personally the more I use a scope the more ways I find to use it. When I have to work on some equipment in-house, or out in the field, I consider it completely stupid to make the attempt unless I had a good scope available for use. I don't know how many times I have had tech's, from our sister companies, call me up for help and they don't even have a scope with them to make measurements with, and to look at waveforms. Many times that single instrument can make or break getting a customer up and running again.

Source record: 132307

Wilson is a pretty good line of antennas, I know there are those who willl disagree, but that's what makes horse races! They are a bit pricey, though, and you could probably end up with the same overall results with a 500 or 1000, for less money. The radio question is kind of a coin toss as well, most store bought rigs are 4 watts, and can be peaked to a bit better, and yes, there are amplifiers and "export" rigs with more power for more money. The thing I am questioning is your intended use... There are very few areas with law enforcement monitoring CB any more, not like the old days. And if you were to holler help, the odds are that you would end up with either no response, or the possibility that the guy that DOES show up ain't exactly what you were hoping for, especially if you are alone at night. Not everyone on CB is a nice guy, although there are lots who are. All in all a rsky option. Get a cell phone, even one of those pay as you go TracFone deals will work fine, and join the AAA for road service. Hell, even any old cell phone that works, without any sort of contract at all for making regular calls, has to be able to access 911. Ask around, a lot of people have old phones from previous contracts, or from an upgrade, especially those big old bag type phones that worked great,, plug it in and you can hit 911. CB's are fun if there are a lot of locals to BS with while you are driving around, but some areas are just plain dead anymore, very few base stations on the lower 40 to ragchew with.

Is the Wilson 5000 magnetic mount mobile cb antenna the best one to buy for reception when placed on the roof of a car? Aren't all cbs the same as far as watts (4 watts I believe), so no 1 outperforms the other. If I'm wrong how do you add wattage power to the cb? Its all in the antenna right? I wan't the best in reception regardess of price. I live in a Delaware where it is very flat. Not a lot of highways in the area, so not too many 18 wheelers. I wan't to use it mostly in case of car trouble, so I can contact a cop for assistance. Are the cops on channel 9?

Certainly a class "C" amp bias deeply into cutoff will have severe distortion. But we are talking about an amp with perhaps 170+ degrees conduction angle. This level of distortion is not detectable to the human ear, unless you claim to be a maestro. I stand by my original statement that a "no bias" transistor amplifier can have great audio if driven from cutoff to below the compression area. The idea bandied around this group so often that a "no bias" bipolar amp always has badly distorted audio is pure rubbish...

Well, the channel sixers do what they do for a reason. The reason is that running at zero or negative bias will give you "the most bang for your buck". Now mind you that is not the most neighborly type of transmission, but it does take advantage of most of the available DC power from a source. They also drive the thing to the moon... which moves them deep into the non-linear compression area. This is what makes them sound so fuzzy. They are evidently willing to put up with the fuzz to get absolute maximum carrier power on the air. To each his own...

What model HP scope are you using by the way? My favorite at work is the HP56400. I also have my own personal Tek TDS-1012, which I just got, at home along with an old B&K 15 MHz dual trace analog scope.

It doesn't help when you can't get a matching device anymore. I remember fixing a guy's 200 watt Hatachi stereo receiver, when I was in my very early twenties and earning my EE degree, which he blew out one of the channels on. It turned out I couldn't get replacement output transistors that matched the ones still good. There was a colored dot on the case which showed what gain range the device was sorted in to. As a result I had to order a complete set of matched output transistors, four in total, to fix his radio. Since the new batch of transistors had a different gain I had to use a scope to reset the bias for the lot of them to eliminate crossover problems.

Just another good reason to have another instrument, of a different type, on hand that you can use as a back up just in cases where you can't trust the readings from one. I've gotten burned more than one trusting a single insterment where the reading seem out of wack and noth checking using something else. This is something I try to impress any new tech, or engineer fresh out of school, we get.

The tech schools and collages don't seem to teach a natural suspicion of instrument readings. They almost always assume that what they see is right. I get questions from new guys asking me to come over and look at a strange scope waveform, and ask how come it looks that way. Then I disconnect the probe from the scope. Tie a big fat knot in the cord, and proceed to throw it in to the nearest trash barrel. After connecting a new probe, and a good waveform on the scope screen appears, that's when I get those looks. Then I have to ask them if any body at their school ever told them that scope probes do fail from time to time, meters can be out of calibration, etc. If something doesn't look right then find at least one other way to check your measurement. That simple idea has saved a lot of wasted time of people screwing around with broken or out of calibration equipment at our place.

True, but I have seen it happen even with differential inputs. Some of the fields generated by our equipment has resulted in some weird readings meters, and scope displays. We have sent many a meter and scope salesmen walking with a new appreciation when we tell them that with many new meters and sopes the internal shielding sucks as well as noise immunity from line conducted RFI.

>
> It's pretty easy to tell splatter from compression and clipping,

You get splatter from compression and clipping. Much more so from clipping. Any hard whacking off of the waveform peaks generates additional high frequency components that were not originally present in the audio. These additional high frequency components appear in the sidebands of the modulated RF signal, thus causing the modulated signal to occupy much more bandwidth than necessary. What you call "splatter" are the high frequency ends of each sideband, on AM, appears so far below and above the normal channel width they appear in the pass band of the adjacent channels. Compression in the power amp section can do the same thing, however the flat topping, i.e. clipping, is not as severe, thus splatter is less common.

>but it takes a little practice to tell if it's from crossover distortion.

Unless the harmonics generated by the two are very different I would suspect anyone would be hard pressed to tell the difference if at all.

> The easiest way to tell is to check the audio going to the final from
> the modulator output and compare that with the distortion from the

With a scope you can tell if its clipping, output stage compression, or cross over without any guess work.

You idea doesn't work if all the pulses are of the same amplitude, such as working on logic circuits. Believe it or not even some of your basic logic IC's DON'T work as documented. I had to find a problem with a CD4098 timer chip once on a new design. Had the thing wired in the non-retriggerable mode, but it still retrigged when a pulse was applied to it before the one shot timed out, thus resetting the one shot. The documentaion said that can't happen, but it did, and only for a narrow range of pulse widths too. We even tested several chips from several manufactures. All had the same problem. Finally gave up and used a CD4528 instead, which didn't show the problem. It took a good digital storage scope, good test techniques, and a couple of days to find this bug.

> And I also noticed that my HP doesn't
> always catch or display a spike, for whatever reason.

Check you trigger settings. On some scopes there are options for high and low pass filtering on the trigger signal. It may be labeled like "noise filter" etc. If you have that turned on by error then you will have mucho problems trying to trigger on spikes. Finally I found on some scopes the trigger function sucks no matter how you set it.

The problem as Frank got me to realize is that it is virtually impossible
given the impedences to get 170 degrees or anywhere near it while
overcoming the 0.7volt junction drop. The idea may work but implementing
it is a real bitchkitty. So you are going to have a rather large 'hole'
right thru the modulating waveform which still will cause a fairly large
reduction in modulation percentage even if, by some minor miracle, it
comes out more or less OK.

What's worse, Scott, is that pretty soon someone is going to figure out
that you can put out a few hundred watts of DSB and win a keydown using
the nincompoop's own carrier to demodulate you. SSB would be better but
with DSB you could point to all the swang and look stupid before anyone
figured it out.

The meter itself (the DVM proper, if you will) isn't intended for RF
freqs, but put it behind a circuit designed to read RF and it is very
accurate.

That's all we are reading here, right? You are just using it for power
measurements or for setting the limiter. If your distortion meter
shows low, your freq counter is right on the money, and everything
sounds fine on the receiver, what more do you need?

My "technique" is fine, and the problem doesn't happen on an analog
scope because I can put the trigger where I want. Those digital scopes
seem to be rather fussy about making adjustments -- they just don't
seem to have that smooth analog response. But I still don't see the
point when I can detect the problem with something that was
specifically designed for the purpose.

That's their hang-up, not mine. Like I said, I have plenty of
experience working with digital scopes, and I even own one. I know how
it works and how to work it. It has many uses for which I wouldn't use
anything else. But for CB radio and most any other radio work it's
just plain overkill.

Yes, it's no big deal if you use the scope every day. But it's not
even necessary if you don't use it at all.

> Now if you got problems getting a waveform to display on the =

I know how to use a digital scope. It's still not as simple, accurate,
or inexpensive as an RF voltmeter.

I did a quick search on the net. It was really easy to find a brand
new HP 8903B for $3500. I looked a little further and here's what else
I found: a Krohn-Hite 6880 for $200.00; an HP 332A for $150; and there
was an HP 334A that recently went for $67 on ebay. I mentioned that
Heathkit might have made a kit, and I was right: AA-1, HO-10, HD-1,
IM-12, IM-48 and IM-58. Or if you want a homebrew distortion analyzer
try this link:

http://www.ethanwiner.com/distort.html

And if you can't find an RF voltmeter for less that $50 then you
aren't looking.

>> You
>> still need most of the other equipment anyway, such as a sig-gen,

How did you get it to work as a signal generator? Or an impedance
bridge? Or a capacitor tester? You haven't done that yet? Well, when
you do let me know.

In over twenty years I have never worked on a CB radio where an
o-scope made a difference.

Which you are not getting.

> This level of distortion is not detectable to the human
>ear, unless you claim to be a maestro.

It is very detectable if you are not on the same frequency. It is also
detectable at harmonics of your fundamental.

> I stand by my original statement that
>a "no bias" transistor amplifier can have great audio if driven from cutoff

>rubbish...

Oh how quickly we forget lessons learned. Do I have to go though the
math once again? I will if I have to. Better yet, take a lesson from
that Pride 100 recently advertised in this newsgroup. A pair of
MRF-450's, ground biased, and no tuned output. Yep, you will be heard
quite nicely for several miles on the intended channel plus a couple
others, and your audio will come in nice and clean through every TV
set for several blocks -- even farther if they don't have cable! Don't
believe me? Ask anyone that has ever used one.

>
> -A

You certainly disregard the facts all the time, Aanal Aaron. Since
you're not a licensed ham, you have nothing to say about it. Try
tuning the frequencies listed above and see for yourself. You've
already proven that you won't do anything constructive if it will
prove you wrong Aanal Aaron; have you called the FCC interference
complaint line to see what they have to say yet? Didn't think so. Have

you call the FCC for clarification on the alleged illegality of 10 metre radios yet? Didn't think so. And you won't.

Please stop wasting all the bandwidth, Aanal Aaron. Get a life. You're nothing better than a TROLL! And a mental midget, as well.

No, I don't. Amplifiers, MAYBE, if operated improperly. But out of
band? There's simply no correlation. If a legal signal in the "legal
40" doesn't cause interference, why would it outside the "legal 40"?
You make no sense, Aanal Aaron. But that's exactly what we expect from
you.

Doubtful. And "your mob" consists of two so far: Aanal Aaron and Yeti.
Some mob. I'm so scared! Neither of you has the cojones to post your
amateur callsign (maybe because neither of you has one?). Ever think
that if you did have one and posted it, maybe people would take you
more seriously? Didn't think so. Probably because neither of you knows
how to think.

hehe, try one of those Peavey's -- what a pain in the ass! And what
they don't tell you on the schematic is that the diode between the
base busses is actually a dual-diode with twice the voltage drop. Put
a single diode in there and you blow it up -- the protection triac
just smokes a trace while a whole bank of transistors blows open and
pulls 2000 watts to the rail!

I have seen the same thing, and the serious students usually learn by
experience. My biggest beef is with the educational system in general,
because it seems they don't teach kids how to think anymore. Sure,
they show them how they can type on a computer or punch buttons on a
calculator, but most of the time the students are incapable of solving
a problem that they haven't been taught specifically how to solve.

Just a pet peeve...

Yes, but you can tell the difference between the cause and the effect.
Splatter can also be caused from a grid-current transistion, but you
can't hear that very well, either.

>
>With a scope you can tell if its clipping, output stage compression, or =
>cross over without any guess work.

As I said before, the distortion is not always visible or obvious on
the scope, even a high-end digital number (which is why I do my audio
testing with a distortion analyzer where -any- distortion is very
obvious). And even if you can't tell the specific nature of the
problem, you still need to track down the responsible party and fix
it. Since the fault won't change depending upon the type of test
equipment you use, I see no difference between using a scope and a
distortion analyzer except for the ease of use and the price.

>bug.=20

Yes, I'm familiar with quite a bit of TTL, ECL and other 'logic'
designs. I'm also famailar with the occasional tantalum bypass that
slipped through quality control, and the occasional lockup of CMOS
devices. Also the problems of common-mode rejection with analog
interfacing devices, substandard fan-out specs, and data-bus
cross-talk. Why do you think I got the HP? It's great for that stuff!

But if all you are looking for is an occasional spike on an analog
line, all you need to do is to set the trigger to strobe the scope.

>> And I also noticed that my HP doesn't

It's called 'harmonics'. If your radio is creating them and you are
operating on the freeloader band, part of your signal will land right
in the middle of a TV station.

<snip>

>more seriously?

Why should he think that? I use my real name yet you don't take -me-
seriously, do you?

> Didn't think so. Probably because neither of you knows
>how to think.

At least I can think for myself, contrary to others in this newsgroup
that jump on the keyclown bandwagone whenever someone suggests that
I'm Voobner, or N7VCF, or Glenn Sparks, or whatever happens to be the
rumour of the week.

Well, since you don't understand the basics of harmonic interference
and band allocations, it appears that even if he -was- implying that
radios are capable of rational thought, they are certainly more
capable at it than you.

>Where's the guy with the 2x4? WHAP!

Gee, a violent reaction to frustration. I hope you don't have kids.

Source record: 132328

A three foot Firestick antenna is a helically wound antenna with variable winding pitch. As such, it has a fairly high 'Q' (efficiency). The higher the 'Q', the narrower the 2:1 SWR bandwidth of an antenna. For an antenna that has been shortened almost 66%, a 2:1 SWR bandwidth of almost a Mhz isn't bad at all, and is very common. Simple physics...

Far as I know you are 100% correct. The 2:1 SWR appears to be about 500 kHz on 27 MHz or about 2 percent which is actually wider than I would have expected a 1/3 size helix to be without a bit of swamping resistance in the system.

Remember the infamous DDRR where the radiation resistance got so low and the Q so hi it would not pass an SSB signal on some freqs without some clipping?

Given debates with Frank tend to go long and deep into the night sometimes although they are generally quite cordial, I was just clearing the path for you; been a while since you got into one of these.

Bionic Klutz

> What is SSB on a cb radio, and what does it do for me?
>

SSB is basically an AM signal with the carrier and one sideband removed.
On a standard AM signal, no more than one watt will be in each sideband
and it is these sidebands that actually carry the communication audio.
What is called a carrier does not in fact carry anything and it is along
for the ride and to make it easy on the receiver. So SSB has a lot more
talk power at the expense of being tougher to tune.

With AM-only rigs being cheapened as we speak it is a fair bet that a rig
with SSB will do a better job on AM, particularly the receiver, at the
expense of a higher price tag.

As far as what it does for you, it allows you to communicate with a better
grade of derelict than you meet on AM.

Does illegally high powered CBs hurt anyone? It seems they do. I just picked
up the August issue of "Scanning USA" and read the article on page 22 by Ian
A. Murphy. The interesting part I quoted below.

"The second problem, being more unknown and deadly, consisted of radio
frequency interference stemming from a number of sources. One such source
was found as a common citizens band radio with major illegal power output.
Another incident of the same type of nature was discovered when one of the
helicopters flew too close to a commercial radio stations transmissions
towers. Both times the flight ended in fatalities for the crews."

The above, if true, certainly blows the argument that illegal CB radio
operations don't hurt anybody. I guess they don't hurt, they in fact killed
somebody.

It would prove even more interesting if somebody wanted to contact the
author, Mr. Murphy, to get any further details of the incident(s).

Granted this sort of thing could happen with Ham equipment as well. The
point being that the pirate CBers on this group steadfastly refuse to
acknowledge that their operations can hurt somebody, and they exercise
little to zero thought concerning the consequences their operations cause.

Kinda like the time I almost had this kid suckered into a bet. He had a big Kawasaki and enjoyed blowing everyone's doors off when we got out of work. He was bragging about that stupid bike in the cafeteria one day, saying he could blow anyone's doors off. I offered him a bet for $200.00 that he couldn't beat a good friend of mine. He started with his smoke and asked 'do you have any idea what I can do a quarter mile in?' .... Like an idiot, I answered 'probably 11 or 12 seconds'. Dum de dumb dumb .... He started 'yeah, I can do .. a ..... quarter .... ummmm ... what'll that car do?'. Stupid move on my part. I blew it, so I told him. The guy had a Ford model A. I didn't know what it would do in the quarter mile, but it would do 1/8 mile in 6 seconds in the mid 120s. It had a modified 454 pushing 550 horsepower measured at the rear wheels (after all transmission and differential losses). Needless to say, there was no bet.

Geez, give it a rest! CBs are used ALL OVER the world, and freqs.
often vary by country. Our chart could apply to MANY other
situations.

If you're so offended why don't you focus on all the U.S. radio
dealers that are getting RICH giving people exactly what they want?
We don't sell radios here, just INFORMATION and a few parts whose
function could be interpreted in many different ways.

Last time I checked we still had free speech in America. Sorta.
Aren't your priorities a bit confused?

Have a nice day anyway...

Since when is accuracy an undesirable priority? The CB channel chart
you distributed in a CB newsgroup lists frequencies from 28.000 to
28.755 as "expanded CB channels". If this is a sample of the kind of
"information" your company offers, you are doing your customers a
grave disservice.

**** Cobra 19 LTD II Classic Power Mod ****
1.) Find the screw labeled "swang" and turn it up until you can hear yourself on your TV. If you can't find a screw labeled "swang", guess. It's bound to be in there somewhere.

2.) Insider Bonus Tip: Disconnect the antenna and key the radio for a couple of minutes. This will ferret out any weak components that may fail later.

3.) After you've replaced the weak components with strong new ones, cut any resistor you see. As everybody knows, resistors limit current flow (read: power and modulation). These "limiters" are put in by engineers who don't know any better. Sure it looks good on paper, but do "limiters" perform in real-world conditions? We don't think so.

At 10-9 Communications, we take pride in our service. We've scoured the truck stops of America looking for the finest techs in the western hemisphere and brought them together in one place. Still, even with all the talent on staff, we urge you to read our disclamer:

DISCLAIMER: We have no friggin' idea what we're doing. Christ, we suck. For the love of God, take your radio somewhere else.

Good luck,
-Alan S.

3279. Why are "Final" transistors called PLL's?

Newsgroup: rec.radio.cb
Date: 2002-08-10 09:28:29 UTC
From: piecheech@aol.comnojunk

This might sound like an ignorant question but aren't PLL's stand for "Phase Lock Loops" ? These are integrated circuits or microprocessors. When did "Final Transistors" became Phase Lock Loops? Is this a misnomer or some "trade name". To me it sounds like some wanna-be tech started playing around with radios and started calling things whatever name out of ignorance. I notice the words pills or PLLs always being used loosely. Like the more pills, the more better or more powerful. When I heard of all the plls, in my mind I'm thinking of Phase Locked loop chips and at the amount being used, you would need a case for your radio the size of a briefcase. To me a Final transistor, a valve, NPN or PNP will amplify power and a Pll don't amplify power. I guess one of us is confused or maybe some of us.

Finals are not known as PLL's. They are unfortunately known as PILLS.

Probably because some ignoramus couldn't understand what a 454 was
and said "that damn thing looks like a pill"

Ok I'm like still a newbie with no formal electronics training but I'll give it a shot.
I think the PLL is the ic's or chips that have replaced cyrstals in modern sets and just set the freq. They are totally unrelated to pills.
The finals are the big transistors located on the back and are about the size (very roughly) of a vitamin (or voobs brain) hence the name pills since some radios have 2 frinals there called dual finals and when there is a bunch of them in a linier it is called an 18 pill etc. The above is mostly infered by me and can be called conjecture so take it with a grain of salt.

Ask him what channel he talks on and if he uses sideband. CB has really grown up and expanded to the point where it is Ham radio for the politically incorrect!
Many sub -communities have sprang up within the cb community. There are the freebanders that have put to good use unused bandwidth and are talking worldwide bringing goodwill worldwide. There is the loud crowd on 6 and 11 pushing back the technological frontier of amplifier design. Sidebanders are using stock radios to shoot skip and make contacts hundreds of miles away. While some activities are not legal like freebanding and etc. enforcement is so sporadic as to be anomalous. Second hand smoke is more regulated then cb radio emisions!
There is a wealth of info both here and on the web. There is also some great guys and some great humor here too!
Happy DXing

3302. Bias Voltage for 4CX350A?

Newsgroup: rec.radio.cb
Date: 2002-08-10 12:53:30 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3D550CCA.6D386D92@qnet.com>
Source record: 132281

Hello All:

I have a Linear Amplifier that was a home brew unit I bought from the TRW Swap Meet. It needed a few small parts and such. The hole Pi network and switching relay, has taken quit some time to run down. But has a way over kill power supply and a regulated screen supply, and a high SWR warning light, with a Duel Slug Bird Wattmeter Cavity, and the Bird Watt Meter right on the face of the amp, well worth a the effort it was to lug home. This has taken about a year to complete, mostly finding the parts that will fit.

I have adjusted the bias voltage to -80VDC, and the output signal looks good and is linear, sounds great.

But I need the actual Eimac 4CX350A class AB1 bias voltage.

Thanks.

Jay in the Mojave

Hi Joe,

you are right PLL means phase locked loop.

Pill is a word CBers (and nobody else) use for a power-transistor
in the final of the rf amplifier.

> Jim

Actually, my call sign, W8EMS, is clealy posted as it's also part of
my e-mail address. I buy and sell a lot of used VHF/UHF commerical
equipment, mostly to volunteer firemen and EMS workers. These people
are authorized to operate the radios through there service's station
license. I would assume that anyone interested in the radios I have
for sale or trade would have an actual legal use for the equipment.

While you are correct that there is no such thing as a "legal dual use
10/11 meter rig", my personal interest, at this time, is operating in
the 10 meter band, which the last time I checked, is legal for a
person holding a general class amateur license.

In reality, we both know that the average person reading these posts
in a CB news group, owning such equipment, would most likely consider
this type of radio a 10/11 meter rig. Please forgive me if my use of
this term has somehow offended you, but I wanted to convey the type of
equipment I am interested in, which is not an "export" CB, but radios
that were sold as 10 meter ham rigs that may have been converted to
cover CB. I would suppose that there are a lot more of these being
used on the citizens band than on the 10 meter band.

I hope this has clarified my post for you and you will sleep better
tonight knowing that I have a legal use for this equipment.

Jay, I would adjust for 60 to 100mA anode-resting current, depending
on your anode and screen-voltage.
About 200W at the anode is OK for AB1

It is operating in the 10 meter Amateur band and the freqs would lead me to believe it was modded years ago although it would be pretty useful now if you had a General Class Amateur ticket. I am going to assume it is SSB-capable because it would have been pretty useless if it was Ancient Modulation only. I would also suspect the 'clarifier' was modded at the same time because Amateur bands are not channelized on HF anyway.

Back conversion depends a lot on what radio it is and how it was converted. Might suggest that you provide the groupies some info. You should be aware that the back conversion is illegal although the original conversion was quite legal.

Were I in your shoes I would contact the nearest Amateur club and sell it to someone licensed to use it and get your $10 back.

If you choose to get licensed I might suggest the following websites.

http://www.arrl.org which among a lot of other things has a club listing and contains virtually everything you would need to know about licensing.

http://www.qrz.com for sample exams. You are interested in Element 2, the Technician, and Element 3, the General.

http://ah0a.org for Morse Academy. The General requires a 5wpm code test.

What you have is a 10 meter ☐Ham☐ radio. 28.000mhz thru 29.699mhz is the 10 meter Amateur radio band. It is most probably possible to have the unit converted for 11 meter Cb use, but that would be a violation of Fcc law, and so would not be recommended, though it is a very common thing to do so. Best of luck.

Hi Joseph,

The frequency band is 10m amateur-radio.
I think it is necessary to swap a xtal to get it down in freq again.
Should be no problem for a cb shop.
Alternatively sell it to a ham and buy something else.

Peter

Amateur Radio Newsline™ Report 1304 August 9th, 2002

Amateur Radio Newsline report number 1304 with a release date of Friday, August 9th 2002 to follow in 5-4-3-2-1.

The following is a QST. U.K. hams take to 5 MHz in a big experiment. Find out the details on Amateur Radio Newsline report number 1304 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: BIG UK 5MHZ EXPERIMENT

If you tune around 5 MHz and hear what sounds like ham radio QSO's, your ears are not playing tricks. A major study of 5 MHz propagation has begun in Great Britain and some hams are already on the air. Jeramy Boot, G4NJH, reports from Nottingham in the U.K.:

--

The 5 Mhz experiment has begun. The Radio Society of Great Britain has announced that permission has been granted by the Ministry of Defence and the Radiocommunications Agency for the allocation of five spot frequencies in the range of 5250 to 5450kHz. The frequencies will be made avbailable in the form of a 3 kilohertz bandwidth channel by way of a Notice of Variation to the UK Amateur License. Because it is a controlled experiment applicants are required to report their findings and results to the RSGB.

The purpose of the experiment is to carry out propagation and antenna investigations aimed at improving the understanding of Near Zenithal Radiation or NVIS - Near Vertical-Incidence Skywave - communications via the ionosphere. The frequencies assigned are 5260, 5280, 5290, 5400 and 5405kHz. It's expected that this experiment will run for about 4 years.

Jeramy Boot, G4NJH.

--

Here in the United States, Charles Harpole, K4VUD, one of the permitted operators of the American WA2XSY 5 MHz-band test stations invites U-K hams to contact him to set up a sked. The 5 point 260 MHz channel would be the best frequency for him. He is available for all times and days until the 20th of August and his e-mail is k4vud@hotmail.com (GB2RS)

**

ENFORCEMENT: FIVE LICENSES CANCELED BY FCC

Five hams who participated in a September 2001 testing session in Yucaipa California and who declined to be retested have lost their ham radio licenses. The FCC's Riley Hollingsworth says that in this case it was the VEC who brought the matter to his agency:

--
Hollingsworth: "Now the W5YI-VEC really did its homework on this one. They picked up some comments and complaints on an Internet News Group about the examination session; did a little homework and further research and found some very good reasons to refer the matter to us."
--

On April 30, the FCC wrote all five requiring them to re-take their Amateur Examinations before June 30th. All five failed to appear. Again the FCC's Riley Hollingsworth:

--
Hollingsworth: "Those licensees were Eddie Bartolome - Extra Class N6YAG of Los Angeles; Camito Lopez KG6GJC a Technician of Los Angeles; Marcial Rivas - General Class KG6HCP of Salem Oregon; Manuel M. Vega, KG6GSP - General class of Anaheim California and Marcelino Llanes, KG6HBR of Oxnard California."
--

Hollingsworth adds that the FCC is continuing its investigation of other examinations given by the Volunteer Examination team involved in the September 1st 2001 session in Yucaipa. Also that his office really appreciates the vigilance of the W5YI-VEC. (FCC, RAIN)

**

ENFORCEMENT: FCC MAY RETURN FORMER KV4FZ TO THE AIRWAVES

An ex-ham from the US Virgin Islands who was forced off the air a year and a half ago by the FCC may soon be back on, courtesy of the FCC. This as the agency indicates that it may act to reinstate the amateur license of Herbert L. Schoenbohm, the former KV4FZ. Amateur Radio Newsline's David Black, KB4KCH, has been following this story and has the latest:

--
Herbert L. Schoenbohm's name shows up a lot in FCC records. He's the former ham who used to hold the callsign KV4FZ. That was before he lost his license.

In December, 1992, Schoenbohm was convicted of fraudulently using a counterfeit access device to obtain long distance telephone service. He was sentenced to two months of house arrest, two years probation and fined $5000. That left the FCC feeling that a felony conviction disqualified Schoenbohm from continuing as a Commission Licensee.

Two years later, Schoenbohm filed with the Commission to renew his amateur radio license. The Commission answered -- but not with what he wanted to hear; instead, the FCC designated his application for a hearing. Two encounters took place--one in 1995, the other in '97. At that point, the Commission told Schoenbohm he should no longer be allowed to have an FCC license.

He was allowed to operate until he exhausted all avenues of appeal. That happened in October of 2000. In January, 2001, Schoenbohm ceased on-air operations.

Before leaving the airwaves, 'though, Schoenbohm vowed that he would one day return to the airwaves as a licensed radio amateur. That day may be soon--based on findings presented at an FCC Administrative Law hearing earlier this year.

The hearing was held to determine if Schoenbohm now meets the requirements to once again become a Commission license holder in the Amateur Radio Service. The finding is complex and covers nearly two dozen pages. But it appears that the government may be ready to give Schoenbohm a second chance as a licensed ham.

The Commission says in part there is sufficient evidence in the record to support a finding that Schoenbohm has rehabilitated himself. The Commission notes that -- based on the evidence --it appears unlikely he would engage in any future misconduct. The Commission's Enforcement Bureau Investigations and Hearings Division endorses Schoenbohm's return to the amateur radio airwaves.

Schoenbohm took and passed a new exam in March, 2001. But the Commission again threw in a delay, designating his application for a hearing on the basis of character issues. This is the application that an Administrative Law Judge has been reviewing. Now that the recommendations are in, the Administrative law judge could issue a final opinion and recommendation within the next few months. That means Herbert Schoenbohm could possible be on the air again sometime this year.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.
--

In the end, it is going to be up to the Commission to make a final resolution as to whether or not the former KV4FZ returns to ham radio. Nobody can predict what that decision will be. And if he is permitted to return, will it be with his old KV4FZ call sign? (ARNewsline™ from FCC Publiic Files)

**

RESCUE RADIO: COMMUNICATIONS TECHNOLOGY HELPS SAVE KIDNAPPED GIRLS

Two kidnapped California teenagers are alive thanks in part to a newly developed law enforcement communications technology. Mert Garlick, N6AWE, has the details:

--
It happened on Thursday August 1st when two teenage girls from the Quartz Hill

area of Southern California were abducted at gunpoint. Using the newly established AMBER child abduction alert system, the names of the teens and a description of the car they were in was immediately distributed to law enforcement agencies and broadcast outlets statewide. Shortly thereafter the California Transportation Authority was displaying information on it’s 316 electronic signs on freeways.

Sheriff's deputies in Kern County soon received several calls from people who saw the white Ford S-U-V. A sheriff's helicopter crew used the information to direct a ground unit that made the felony arrest stop. When he resisted and brandished a weapon, deputies shot and killed Roy Dean Ratliff and freed the girls.

The rescue took place only six days after Governor Gray Davis directed the installation of the AMBER system. AMBER uses a combination of two-way radio, fax, e-mail and other communications technology to quickly spread word when a child is abducted. It is based on a program developed by Dallas-area broadcasters and named in memory of nine year-old Amber Hagerman who was kidnapped and murdered in 1996.

In this latest case it took less than 4 hours to get the AMBER alert on the two missing girls circulated to the road signs. California’s Governor Davis says that his states AMBER system will now be refined to make it react more swiftly.

For the Amateur Radio Newsline, Mert Garlick, N6AWE.
--

Today, there are forty-one AMBER Alert programs across the country. The system is credited with safely recovering at least seventeen children since 1997. (Published news reports)

**

ENFORCEMENT: PLEASE FIX THE INTERFERENCE

A pair of utility companies have received letters from the FCC regarding unresolved interference complaints from area amateurs. According to the W5YI Report Lakeland Electric Company in Florida and Commonwealth Edison in Illinois both were sent notes reminding them of their responsibilities to prevent interference to radio stations including radio amateurs. The letters gave the electric companies 90 days to either resolve the problems or contact the FCC with a specific timetable for making the fix. (FCC from W5YI Report)

**

HAM RADIO POLITICS: NEW DIRECTORS FOR THE NFCC

Turning to the ham radio political arena, word that Ken Chilton, KA1TIH; Alex Harvilchuck, N3NMN and Vincent Bardsley, KB3OM have been elected to the Board of Directors of the National Frequency Coordination Council. They replace outgoing Directors Dick Isely, W9GIG, Owen Wormser, K6LEW, and Dave Baughn, KX4I, who helped form the NFCC at a meeting in St. Charles Missouri back in 1995.

Chilton, Havilchuck and Bardsley also join Nels Harvey, WA9JOB and Clay Freinwald, K7CR as the duly constituted National Frequency Coordinators' Board. This for the twelve month period starting on September 1st. (ARNewsline™)

**

HAM RADIO POLITICS: NEW SACRAMENTO SM IS OLD SACRAMENTO SM

California’s former Sacramento Valley ARRL Section Manager has become the new Sacramento Valley Section Manager following the resignation of the current Sacramento Valley Section Manager. Confused? Well, here’s what happened.

According to an ARRL Bulletin, Jettie Hill, W6RFF, of Roseville, California, has been appointed to succeed Jerry Boyd, K6BZ, as the Sacramento Valley Section Manager. This is because Boyd is moving out of the section.

Boyd was appointed in 2000 to replace Hill. Hill continued to serve the section as the regions Affiliated Club Coordinator and as an Official Relay Station. W6RFF previously served as Santa Clara Valley Section Communications Manager from 1978 until 1982 and as ARRL Pacific Division Vice Director in 1982 and 1983. The appointment of Hill, who had previously served for more than 10 years as Sacramento Valley S-M became effective on August 1st. Got that? (ARRL)

**

FUTURE TECHNOLOGY: HIGH TECH WORKERS NEEDED

Still in California, word that lack of qualified workers is costing Silicon Valley billions of dollars annually. The management consulting firm A.T. Kearney says that this is threatening the regions position as a global high technology center. The region's shortage of high-tech workers means that one in three jobs requires special recruitment efforts, or goes unfilled, leading to a loss of over $3 billion a year. (ProPeople.com)

**

RADIO REGULATIONS: PERMANENT CELL NUMBERS ON HOLD

Mobile phone users who want to keep their numbers after switching wireless companies will have to wait until late next year for that option. This after the Federal Communications Commission gives cellular phone companies until November of 2003 to offer customers the choice.

The new date, one year later than the previous deadline to implement the service. It is the third extension granted by the FCC. Most wireless companies oppose the idea, arguing it would cost billions of dollars and drain resources needed to improve and lower the cost of wireless services. (FCC)

**

WITH THE HANDI-HAMS: EXTRA CLASS MANUAL IN AUDIO

The Handi-Hams have announced that the latest ARRL Extra Class License Manual is now available to it’s blind members in adapted audio format. At the present time Handi Hams only digital media available but the audio is being

re-mastered onto tape. When the cassette version is available Handi Hams will let us know so that we can let you know. Meantime keep an eye at Book and Tape Catalog area at www.handiham.org for updates. (Handi Hams)

**

THE SUPPORT FUND REPORT WITH ANDY JAREMA, N6TCQ

Its time for a report from the Amateur Radio Newsline Support Fund. Here's our Administrator -- Andy Jarema, N6TCQ:

--
There are two items to cover this week. I'll start with our poll regarding credit cards. Three weeks ago we asked those interested in supporting Amateur radio Newsline using a credit card to write the single word YES in the subject line of an e-mail and send it to us. We have tallied the results and there were only 17 who said yes. And of the 17, all but one said that only a Pay Pal account was acceptable to them.

Well, statistically speaking, you don't have to know how to do linear regression to know that 17 people out of the 10's of thousands who listen in each week is not a very good response. What it says is that 17 people have Pay Pal access and would use it to help support Amateur Radio Newsline. Even so, we looked into creating a Pay Pal service for those who wanted to use it. Without wasting a lot of time, suffice it to say that the costs involved versus the return would not warrant the expenditure. So at present the credit card issue is dead. For now at least, the Support Fund will remain as it always has. Just the P.O. Box where donations can be sent. Get a pencil and paper ready. I'll give it in a few moments.

The other item I want to touch on briefly is the current state of the checking account. Thanks to your generosity, we made it through June and July. What that means is the bills from May were paid in early June and those from June went out on schedule in July. Now it's early August. The July bills have come due, unfortunately at the same time that our folks are off to Huntsville, Alabama to present the 2002 Young Ham of the Year Award. So that you get a better understanding of the costs involved, I've done a rough breakdown.

First of all, our corporate underwriters Vertex Standard and C-Q Magazine cover almost all the costs of the young person selected for the award. They pay their airfare. They pay their lodging. Vertex-Standard provides an additional gift of Yaesu brand ham radio gear. C-Q treats the winner to a week at Spacecamp. When you add that up, it's probably a gift package with a retail price tag of close to $5000.

Obviously, they do their part and we have to do ours. It costs about $300 a year for a round trip ticket to get one of our people from Los Angeles to Huntsville. Actually, we have our people fly to Birmingham and drive up to Huntsville because this saves quite a bit of money. Yes, it takes them out of their way and adds a few hours of travel time. But the savings in airfare make this added time worthwhile.

The wonderful folks at the Huntsville Hamfest provide us with a free room. We do have to pay our people's expenses like food, hotel, telephone service and a rental car when necessary. We also pay for the plaque presented to the winner and for the mini-banquet we hold for him or her on the Friday night prior to the actual Saturday presentation. The total this year will be somewhere between $1000 to $1100. So we need to raise that in addition to our normal $800 to $1000 it costs monthly to keep the Amateur Radio Newsline newscasts coming your way. And that's where you come in.

Amateur Radio Newsline is a federal 501 (C) (3) not for profit corporation. Donations to it are tax deductible. The address – you've heard it before - is Post Office Box 660937, Arcadia California. Our Zipcode is 91066.

OK. 'Nuf said. But I'll be back next week with the latest thank-you list. For now, from Arcadia, in sunny Southern California's San Gabriel Valley, I'm Andy Jarema, N6TCQ.
--

If you missed the address given by Andy it will repeated at the end of this weeks newscast. (Newsline Support Fund)

**

HAM RADIO IN SPACE: KD5MDT REPLACES KC5FVF ON ISS EXPEDITION 6 CREW

Astronaut Don Pettit, KD5MDT, has been named to replace Don Thomas, KC5FVF, as a member of the Expedition 6 International Space Station crew. According to the ARRL Letter, Pettit had been training as backup flight engineer for the increment six team and was ready to step in.

NASA said the reassignment resulted from a medical issue that affects Thomas' long-duration space flight qualifications. According to Astronaut Office Chief Charlie Precourt, KB5YSQ, the demanding nature of long-term space flight requires a conservative approach to crew health issues, especially this early in the program. Pettit will join Expedition 6 Commander Kenneth Bowersox, KD5JBP, and Russian cosmonaut Nikolai Budarin, RV3DB. (ARRL Letter)

**

HAM RADIO IN SPACE: THE METEORS ARE COMING

Weak Signal operators -- listen up. The Perseid meteors are on their way.

Lee Wical, KH6BZF, says over the QCWA remailer that from midnight to dawn, on Monday August 12th and Tuesday August 13th about 60 to 70 meteors per hour will enter Earth's atmosphere. This particular meteor shower is created by the Earth passing through the debris field left from the Swift-Tuttle comet. The grain-like particles enter Earth's atmosphere, burn up and create what most

people call shooting stars.

The Perseid Meteor shower is not expected to be as spectacular as the Leonid Meteor shower that occurs each November. But, if viewing is good, people will not be disappointed. And if the ionized tails are good, ham radio meteor scatter D-Xers and WSJT users will be happy as well. (KH6BZF)

**

INTERNATIONAL - UK: LONG WAVE GOODBYE

As predicted by Media Network, the loss-making sports station TEAMtalk 252, which broadcast to the UK on 252 kHz Long Wave from a transmitter in Ireland, has closed down. This, after less than 6 months on the air. The station ceased broadcasting at 1300 UTC on July 31st. (Media Network)

**

INTERNATIONAL-CANADA: NEW RAC QUEBEC SM

Claude Paquet, VE2OCP has been elected as Radio Amateurs of Canada Section Manager for Quebec. This, for a two year term that will begin on November 1st. Paquet ran unopposed, eliminating the need for a balloted election. He has also agreed to complete the term of Richard Desaulniers, VE2DX who resigned for personal and professional reasons on August 1st. (RAC)

**

DX

In D-X, G0TQJ he has now gone QRT from Afghanistan where he operate slash YA. During his say in Kabul Chris made 1950 QSOs on SSB and another 850 on RTTY. He is getting his QSL cards printed. He has also sent his documentation to the ARRL DXCC desk for approval. (GB2RS)

And the FISTS newsletter reports on the apparent pirating of callsign ZD7CW. The pirate is using CW and not very active. In fact, he was last heard in November of 2001. But the real ZD7CW has been inactive for several years. (Q-News)

**

THAT FINAL ITEM: A TRUE CAPTIVE AUDIENCE!

And finally this week the story of an interesting call sign operating from a rather unusual place in Ireland. Here’s Q-News Graham Kemp, VK4BB;

--
From our files, the story of a captive audience. A permanent amateur Radio Station with the call sign EI0CRM -- you heard right -- C-R-M -- “crim” -- EI0CRM is being set up in of all places the radio museum of the Cork City jail.

Cork City jail opened for business in 1824 and was used as a prison until 1923. When Radio Erin was expanding in the mid 1920’s, it was located in this jail. Its call sign was 6CK.

The broadcasting studio is now fully restored and a fine display of radio artifacts are on permanent display. Have a listen out for EI0CRM
--

Talk about a QSL card that you may want to keep under lock and key. (Q-News)

**

They don't call them PLLs, and you are correct about PLLs. They call
them "pills" because that's what they look like when they're soldered
onto the PC board.

Tell you what, Aanal Aaron; you post your callsign. Then I'll decide
whether it's hearsay or not and decide whether I choose to post mine.

And nobody takes you seriously.

Who's "Jim"??

What's yours? You don't even know that Novices and Tech +s can use
voice on ten meters and YOU are some kind of expert? You get cornered
and start posting thru an anonymous mail server? You really think
anyone takes you seriously?

You have no clue what a "wouff hong" is.

WOW, Military, Broadcast, Ham and just about everyone elses frequencies.

I guess you don't care where you trespass.

There is an interesting tidbit from Phil Kane, retired FCC honcho in San Fran and practicing communications attorney.

Seems that a location has to be formally warned, kind of the 'first bite is free' theory, before the big bux raids can begin. These are recorded in the FCCs Daily Digest and not generally in the Enforcement Bureau's stuff which is what gets advertised.

Jerry has pointed out here that the Enforcement Bureau has only recently got the funding and manning to carry on much of a program and this sort of rule definitely slows down the victory march. But at some point the i's get dotted and the t's get crossed and the fun begins.

As I have noted before, undermanned operations tend to perform crucifixions and leave the body hanging; tends to get the attention of the masses in one hell of a hurry. One is really not in that much danger but being the crucifixee is not a lot of fun.

You know exactly the word I meant this is typical when a troll can't answer the question the y look for keystroke errors. LOL Yes Dick Head you are a Classic Troll. Does your Daddy know your sniffing his underwear after he leaves for work?

> Tell you what, Aanal Aaron; you post your callsign. Then I'll decide
> whether it's hearsay or not and decide whether I choose to post mine.

Dickhead you said you have nothing to hide so far you have provided a bogus name and no call sign. Do I need to quote where you said you have nothing to hide? If you have nothing to hide and are indeed a ham why won't you post yours?
I will tell you why because your nothing more than a Troll and a coward yet you ask others to do the same . LOL your a Pathetic Putz! Go back to your CB because your not a ham nor are you a man. LOL What a jerk off you are

> And nobody takes you seriously.

Like you have any credibility in this NG, you are a nobody I drop bigger terds than you down my toilet.

Yes, but what about the grammar corrected version? "Explains how to's, and
.pdf file on home-kits and MORE...pictures are high quality, formulas, and
do-nots that will get you up and sounding great". Huh? Perhaps we can word
it as:

"This CD contains HOWTO styled instructions, as well as pdf formatted
documents of kits you can build at home. These documents are complimented
by clear, high resolution pictures. With our included formulas and list of
"do-nots", you will gain the knowledge required to get that radio on the
air and sounding great."

Damn, I should've been in marketing.

Unfortunately, the "growing" and "springing up" examples that Kenneth
mentions are mostly activities of illegal outlaw operators.

A radio hobby based on blatant disregard for laws is NOT a
"politically incorrect" version of ham radio. It is an illegal
version of CB.

Here's a bit more "growth" that Kenneth failed to mention. In recent
years, illegal high-power CB has gotten so widespread and so
detrimental to citizens electronic devices that Pres. Clinton signed
HR2346, a bill allowing local communities to enforce CB laws and
prosecute offenders. And due to illegal imports of contraband radios
aimed at the CB market, more and more freebanders and outbanders have
trespassed on amateur radio frequencies, forcing the FCC to new levels
of enforcement.

Hopefully some of the more responsible CB'ers in this ng will step up
to the plate and offer a legal alternative to Ken's view of what the
CB hobby is all about.

If the Amps pushed as 'competition' around here qualify as 'pushing back the technological frontier of amp design' I am Heinrich Schnibble and the frontier is the dirt mound around the landfill.

Want to see frontiers pushed back go down to your local Broadcast station. The local 50kw loudenboomer bought a new transmitter, one of the 91% efficient Class E switchers some time ago. The engineering staff in December wondered what that noise and smell were; it was the furnace coming on for the first time in many years. The only thing the competitors can do is buy things and there are any number of charlatans ready to take their money.

A keydown is a CB version of the loud stereo contest that has pretty well died out along with the participants' hearing. And the same junk attitude applies as the thumpty-thump, thumpity-thumb bass you hear every now and again when you can hear the mismatch, cross-phasing, and/or bust-up from the IR drop in a totally inadequate power supply. While I will admit that some of the alternator arrangements are sex on a popsicle stick (and some are spectacular failures) the amps themselves are theme and variation on Motorola Micor boxes and not nearly so well built. There is not an idea in any of them that was not in the appnotes in 1975. The X-Farce website is unintentionally hilarious to anyone who knows beans from blueberries

and the copycat Naughty Dog site is simply revolting.

But sometime before I die I want to see a 128 pill cascading failure and the look on the owner's face when he prices 128 2879s, sits down with his vat of heat-sink grease, and procedes to replace them. For the bill, there is mastercard, the rest is priceless.

Listening is virtually always legal. And in fact any number of SWLs buy a good ham transceiver for short-wave listening and simply put the mike in the drawer for reasons of price believe it or not. He would find a lot of people out to fix his little red wagon were he to become a 'slim'.

Amateur rules do not permit contact with unlicensed stations nor do they offer the pirate any protection from interference. With any number of data bases available for instant look ups the odds of getting away with it for long are slim and none.

Maybe pricey but Dr Pepper shoots some damn good skip with them not mention local talking. He uses both vertical and horizontal Predators, alternating to what he feels is the best for the conditions. I know the Horizontal unit may be hard to tune on a vehicle as the close proximity to the ground seems to make them hard to tune. If you want to speak with some folks who use them and have contacts to buy them reasonable try logging on to Paltalk and look in the MISC category for CB realted rooms. Catch you there or on the air.....333

I used a Uniden 2510 mobile on 10 meters for a while. I even hooked up my key to operate CW. Who are you to say who gets to operate what radio where? I would still have that radio if I hadn't sold it to a ham friend of mine a few years back. Sometimes I wish I still had it. If I wanted to buy aother one via ebay or anywhere else, I should have that right.

> The law states that phoney 10 meter radios are illegal. There is
> evidence that they are being used illegally. They will continue to be
> banned from eBay, and I and others will continue to support
> enforcement of the law.

Nowhere does it say that hams can't use those radios for 10 meter use. There is no requirement for type-acceptance of amateur radio gear. We hams can use whatever radio equipment we want to, providing we are using it within the limits of our license (frequencies, power limit, etc.) We can use old military, business band, maritime gear, etc. provided it's been modified or otherwise able to operate on the ham bands. We can even build our own equipment. If I built a 10/11 meter radio from scratch, I could operate it on 10 meters legally.

If you tell ebay to remove auctions of these radios, you could be interfering with a valid sale of amateur radio equipment from one ham to another.

I've used these kind of radios on 10 meters and they didn't sound like crap.
They are very good radios. And there's no law that says you can't sell one
to another ham, or even a CB'er.

You seem to think that these radios are manufactured as 10/11 meter
transceivers. What you don't seem to realize is that the 10 meter radios
have to be modified to operate on CB freqs. True, it usually is an easy
mod, but they come from the factory operating only on 10 meters.

>I've used these kind of radios on 10 meters and they didn't sound like crap.
>They are very good radios.

Indeed, you are correct. I get great signal reports using a Lincoln. (HR-2510)
Heck, I just received one a few minutes ago from an LU1 (Argentina) station.

>And there's no law that says you can't sell one
>to another ham

Absolutely.

>, or even a CB'er.

As long as the CBer doesn't transmit...this one can get a little messy, but the
onus is on the seller here. The actual use is still on the buyer though.

>You seem to think that these radios are manufactured as 10/11 meter
>transceivers. What you don't seem to realize is that the 10 meter radios
>have to be modified to operate on CB freqs.

They're still legal for use by hams, even if they're modified for full
10/11-meter coverage. However, the onus is still on the user to use the radio
within the limits of his/her license. That is:

28.1000 thru 28.29999 MHz for CW & 28.3000 thru 28.4999 MHz for phone for
holders of a Novice or Tech "+" (Tech "plus" Element 1 credit.) at 200 watts
max output.

The full monty (28.0000 thru 29.6999 MHz.) at a gallon and a half (1500 watts)
for Generals and Extras. (Dick, Jim, Doc...kindly correct any errors.)

NO transmitting anywhere else on 11-meters, although it's fine and dandy to
monitor to ones heart's content.

>True, it usually is an easy
>mod, but they come from the factory operating only on 10 meters.

Correct, but then they all are...Yaesu, Kenwood, and Icom included.

Good question, I should have been more clear, it is illegal to
transmit with this unit unless the operator holds an FCC Amateur
Radio Operators license. He can listen all he wants.

I'm not really a legal expert in these sorts of things (or anything, if I was I'd be a rich lawyer <g>) but is there anything wrong with selling a purpose-built 10 meter amplifier? The seller makes no reference to CB, purchased the item from a ham, and seems to be marketing it to other amateurs. I do know that many CBers use Palomar amplifiers on CB, however. I'm not a ham, so I'm not real clear on regulations. I did find this, though (Title 47, Chapter I, Subpart D, Sec. 97.315 Certification of external RF power amplifiers)

http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=97
&SECTION=315&YEAR=2001&TYPE=TEXT

After looking over it, it seems that RF amplifiers that operate below 144MHz *not* constructed by an amateur need to have a grant of

certification from the FCC. This would seem to include this amp. However, there's a little clause in there that reads:

*****
(b) Any external RF power amplifier or external RF power amplifier kit (see Sec. 2.815 of the FCC Rules), manufactured, imported or modified for use in a station or attached at any station must be certificated for use in the amateur service in accordance with subpart J of part 2 of the FCC Rules. This requirement does not apply if one or more of the following conditions are met:

...(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and the amplifier is further sold to another amateur operator for use at that operator's station.
*****

It would seem that the amplifier sale in question is legit...I think. That exception states "...purchased in used condition by an equipment dealer". Can the seller in this auction be considered an equipment dealer? Just what constitutes an equipment dealer, anyway? I dunno. So now I'm confused. Is this sale legit or not? My gut tells me that if a licensed amateur buys it, he's alright. I could be wrong.

Thoughts?

Tom,

I doubt it. I honestly think the majority of sales of these radios are to "freebanders" and not to hams. When you look at the features of these radios (roger beep, channelized, echo, noise toys, talkback, etc) and their marketing outlets (Copper, Flying J Truck Stop, CB Shak, CB Shop, etc.) it becomes even more evident that hams are not the actual or intended customers.

My guess is that legitimate ham to ham sales are a tiny portion of total sales. And don't forget there are a number of licensed hams "gone bad" who, for whatever reason (whether it's chafing against the limitations of their no code license, or simply an antisocial aberration) operate illegally in the so-called "freeband" and encourage others to do so.

But if you feel there is a danger that hams rights are being threatened, you may want to take your concerns up with Riley Hollingsworth. He is presently opening cases against several truck stops that are selling the gear you are describing. And he recently created a liason between his office and eBay to interdict the sales of such equipment.

Cordially,
-Aaron-

It is pretty confusing. What makes it even more confusing is that there are dishonest people that will use technicalities of the law for the purpose of subverting it.

In such cases, I believe you have to be guided by the spirit and intention of the law. In this case, the law's intention and spirit is to prevent CB'ers obtaining and using RF amplifiers for which they are not authorized.

The fact that this amp is capable of 11 meter use and that it is being advertised as a "CB Ham Amplifier" isn't a good indication that it's going to be used and sold legitimately.

LOL, Scott. Nice try. What Tom *actually* wrote was:

>If you tell ebay to remove auctions of these radios, you could be
>interfering with a valid sale of amateur radio equipment from
>one ham to another.

Please note that I don't "tell ebay to remove auctions of these
radios". I simply report auctions that appear to be in violation of
FCC law regarding sales of equipment commonly abused by outlaw Cb'ers.

Ebay makes the decision. Ebay removes the auctions.

Gotcha. And I agree. But the item I was referring to (still there)
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1371141112

was posted by Packrat. He posted that in response to JJ, saying "You missed
one". This is what sparked my curiosity as to where the law stood. This
particular item is not advertised as a "CB Ham Amplifier". I believe your
referring to the other one advertised (now killed by Ebay).

You are right, because if I had a 10/11 meter radio for sale and I knew the CB'er would use it on 10 meters, I wouldn't sell it to him. But I wouldn't have any problem selling it to another ham.

No, but I used to around 10 years ago. I had some friends who were CB'ers, but I moved and the town I live in now has almost no CB activity. Plus, I just kind of lost interest in it since I had all the different ham bands to use. It just wasn't that exciting. It was actually more fun to operate on 10 meters while mobile.

I think your modulation boost is a good idea... but don't know if you understand that turning up your power a couple Watts is really not worth the effort. What antenna are you using? You would be much better off increasing your ERP(effective radiated power) by improving your antenna system before any attempt at a RF power boost.

Someday, Prof, we are going to have to have a bit of a discussion about AM. I can take my usual position that swing is bullshit, it is not possible to modulate beyond 100% by simple means and efforts to do so are stupeed and generally counter-productive as well as antisocial, and limiter cutting is insanity on a stick.

You apparently have other views which I would love to discuss.

Source record: 132426

"Swing" is not the panacea of AM. However, it does have several things going for it. It allows for the transmission of the maximum intelligence (some CB operators not withstanding) to be conveyed from the AM signal. While I certainly agree that modulation levels over 100% are counterproductive, if the "swing thing" is done correctly, that should not be a problem. You see, that if the carrier rises and falls at the audio rate, the modulation will not exceed the limit at any given instant. It also has a benefit of not tying up a frequency with a strong carrier when no voice is present. This advantage can clearly be seen in SSB transmissions. This is definately not a sytem for "carrier throwers"...lol

In your defense, the swing does have a negative. This is evident on a very noisy channel where the noise is heard clearly between words. With a heavy carrier, it will have the tendancy to "blot" out that background channel hash.

My preference is to have both, or better yet, a variable carrier. This allows swing for excellent audio "punch" for quiet conditions and a high carrier for when the channel becomes noisy...

You know, I for one think that a discussion in this area would be a good
thing. Too many people are hung up on this "swing-kit" thing and probably
don't understand the concept of modulation. Shoot, I could stand to learn
more myself. I believe that too many people assume that swing kits,
limiter cutting, etc are a good thing. A sincere and polite discussion of
the matter just might get somebody out there to reexamine what they once
thought to be true and correct. In fact, I'm sure it can be discussed
without bringing legality into it. Perhaps many feel that "cranking up
the modulation" is only illegal because it lets them "get out" further.
Explain how it has the reverse effect, and maybe they will see the light.
Who knows, they may take this new found knowledge and educate their
fellow CB'ers. This would be a good thing.

Actually the legality issue is about type-acceptance. CB'ers are not
permitted to modify their radios, period. You can understand the
reasons for this. Clipping the limiter may just make you sound
obnoxious, but clipping the harmonic traps will allow the transmitter
to radiate on other bands and interfere with other services. Since CB
is license-free it must be asumed the user has no techical knowledge,
therefore the FCC's solution was to ban users from playing inside
their radios altogether.

Dick,

Flying J and Pilot has alread had their warning shot fired across their
bows. Flying J, at least, doesn't seem to think thar's bullets in the
cannon. Some of their locations are still selling the illegal
radios--like the one at Exit 70, I-20 in Columbia, SC. Yes, I dropped the
dime along with a few
others, and if the illegal truckers don't like it, they can KMA!

It's not what the illegals do on the regular 40 that's gonna cause the
manure to hit the fan; it's the ones that are roaming out of band that's
finally gonna start the war. We'll see who's laughin' pretty
soon.

> -Alan S.

Alan,

In plain dress, here's the real scoop. No amplifier is to be built, sold,
or imported that operates between 24-35 MHZ out of the box. What that
means, as it applies to this case, is that no one
can manufacture purpose-built, single band, 10 meter amplifiers, or sell
them in the USA. Amplifiers built by registered manufacturers must be
certified by FCC for Amateur, or commercial
use, and *may* be modified by the end user for 10 meters upon proof of
proper license. Hams
may build amps for their own use and may sell no more than one (or is it 2?)
amp per year. Therefore those Palomars, Texas Stars, so-called
'modulators', etc are completely illegal. Again,
the hams have the illegal 11 meter people to thank for this little
inconvenience.

In a post above Prof makes some points that may well have some validity. My experience with it is from broadcast where 'controlled carrier' had a following about the time I was born and a short life during the death of AM on the ham bands. This is not a new idea by any means. But CB is a mobile service and neither broadcast nor HF amateur was in this era and really is not now.

I will contemplate at length but at the moment I am more interested in catching some snores.

3411. Re: Bias Voltage for 4CX350A?

Newsgroup: rec.radio.cb
Date: 2002-08-11 04:11:43 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3D55E3FF.46882A6E@qnet.com>
Source record: 132442

Hello Peter:

The amp uses 4 each of the Eimac 4CX350A tubes, but uses only one bias voltage control, and a resistor network to have equal voltages at the grids.

I am concerned that the tubes may need a slightly different bias voltage as compared to each other, to get "equal" no signal plate current.

And a single source of bias voltage may not allow each tube to be dead nuts on the same no signal plate current. I have searched the stores and Surplus stores from Pasadena to Sun Valley, today, and found a box of 5 watt Pots (I bought the hole box) that will allow each 4CX350A tube to have its own individually bias voltage adjusted for equal no signal plate currents.

Tomorrow I'll mount the 4 each pots and adjust each tube for equal no signal plate current. And see.

Comments, suggestions..........

Hello fellow hobbyists!!

For a real review on the new all in one UHF CB and Scanner, head over to Newcastle Scan
http://newcastlescan.tripod.com There's other info and freqs NO pop ups just a real
EZINE style website...

We must thank Peter From Newcastle Pro Sound
(http://www.newcastleprosound.com.au and I guess new web site coming soon)
for opportunity to review this little beauty
and uniden for expanding their vision (about time for an 2 in 1).

If you want to sell an old radio or scanner send an email and we put it on
our classifieds page

any amateurs who have written a basic introduction to amateur radio we
really need it for our site, of course including freqs with Newcastle in
mind:) (well we got the HMAS Nottingham!!!)

Cheers and best wishes
Mike and Garry

Gawd ... I'll sleep better! ;)

You didn't offend me. I don't check the properties of the messages as many of them have been 'anonomized'. (how the heck ya spell that?)

Hope you sleep better!

From: Jim Hampton <aa2qa@FrontierNet.net>
Message-ID: <ulbt6mmrmsdo37@corp.supernews.com>
Source record: 132446

They aren't. PLLs are phase locked loops. Pills has, apparently, become the shorthand for 'transistor'. 'Valve' is a British term for vacuum tube. That said, some wannabe tech will put all kinds of technobabble in his advertising so he can charge you about $75.00 per hour for labour that isn't worth 75 cents.

Gad, sounds like cb radio...And I have to get a license for that???
Geez!!!! But really , isn't it ok for people to let off steam once in
a while instead of being old sticks in the mud? You have to admit. It
is great third rate entertainment, and all you have to do is roll over
and turn it on, and turn it off....Good day.

Yes, you could post your call sign there...why don't you do that "Aaron"?

On the other hand, I see no reason at all to post a call sign in such a public forum. Particularly if you are using a real name and e-mail addy. By posting with your call (oh yes, but you don't have one of those, do you "Aaron"?) a person can have, in just a couple of minutes time, your real name, a street address, an e-mail address, and if you are in the book a phone number.

Since you have no callsign to post "Aaron", why don't you just tag all that stuff to the bottom of each of your NG post instead?

By the way, I have never posted to this group under any name before, but I have been lurking, reading the mail for a couple of months. Your attitude sucks "Aaron H. Voobner". I bet you drive a Trans Am or something like that, cause you sure act like you are compensating for something in here.

Before you ask/accuse, I run no illegal CB gear, nor do I own any. All of my gear is legal/original and it is ALL tube.

Oh come on Jim. What does that 1/8 mile stuff have to do with
anything. The fact is the nip bike would take him off the line and
take him in the straight away in the quarter mile. You can't really
judge anything with 1/8 mile stuff. If that car hits 120 in 1/8 mile,
then it is pretty close to topping out and that bike can, with a good
rider, go over 150 mph. Give me a break already. You just did a
number on that guy's head, and if he knew what he was doing , he
should have taken that bet and your money, piece of cake....Isn't it
time for your milk and cookies?

Chill out, Eagle. Check the archives. Do a search on "jay" and
"aaron". You will see that Jay has been posting love letters to me for
a long time now. The reason I threw in that crack about his callsign
is because typically Jay will offer the excuse that he's asking CB'ers
for advice on amplifiers because he's a ham. But whenever I ask him
for his call sign, he gets real quiet and stops answering. Oh well.

-Aaron-

PS: What's so bad about my attitude?

Hi Jay,

Usually it should be no problem to have the bias of 4 parallel tubes
the same value.
If the tubes differ in idle current, you adjust them on the same no
signal current with 4 different pots, but dynamically driven, they
differ anyway.
I once built an amp with 3 tubes parallel and that did very very nice,
found little higher EHT better for improved linearity (2500V)

Good luck with your modification.
You were lucky to find 5W pots already...

Peter

That's odd. It says it's a "ham radio amplifier" but it has only two
modes, AM and SSB. And it says it covers 80-10 meters but there's no
band switching at all.

Not to mention that being in the 476-477 MHz range, the local operators of TV Channels 14&15 in the smaller areas where it is not used for P/S biz use as the 'S' Band will scream and holler and wave their arms and that is not a pretty sight.

Well we just found out who won the sixth form Latin medal, perhaps the
high point of his life.
And now we see him devoting a lifetime to attempting to impose Latin rules
on a Germanic-based language.

No Peter, the plural of Sheriff is Sheriffim, stewardess gets stewardii,
and pretty soon you will admonish us about ending sentences with
prepositions. That, sir, is the sort of nonsense up with which I will not
put.

Dick

Fair enough. It would seem then that we have a discussion in two parts:
We seem to agree about gimcrack attempts to be 'louder' by means of
cranking audio. We seem, for the moment, to disagree about what makes a
good AM signal.

So the issue appears to be just where varying carrier level fits into the
scheme of things. I will admit to wondering about needing 'punch' when
things are quiet but WTH.

Traditionally, AM was more a case of elimininating negatives more than accentuating the positives. So one did things like:

1. Frequency processing. Below 300 Hz, the audio lends virtually nothing to intelligence and sucks up a lot of audio power for no really good reason. Above 2500-3000 Hz one gets bandwidth and 'presence' but no real improvement in communication. So the first step in both Communication AM and FM (the filter does this on SSB) was to ruthlessly eliminate these freqs from the audio. Coupling caps zap bass and RC roll-offs can do a treble whacking job. The old carbon mikes of telephones and Motorola coffin boxes did the job on this bit of communication hardware.

2. Frequency discriminatation. There was and is no requirement that communication audio be hi-fidelity and the first time a woman ate the lunch of her male counterparts in a DX pile-up it was discovered that a response curve peaking at about 1200 Hz is not the world's worst idea.

This whole area of audio processing seems to be foreign to CB as apparently is mike impedence matching. Gangaroonies, an old crystal/ceramic D104 which takes about 250k input sounds like dogshit in a rig designed for 600 ohm dynamics; no one's fault, they just never were designed to work together. We need the CB equivalent of Bob Heil K9EID.

3. Clipping, Compression, Limiting (there, I said it again). Simple problem to state, the human voice has a peak-to-average ratio of about 4-5 to 1 which means that on average an unprocessed AM sig is 20-25% modulated with the peaks at 100. Same problem in broadcast and other services. The solutions are variations on the same basic scheme. Compression can be viewed by watching your preacher on Sunday as he wanders around waving his arms and never changes audio level. Done in the broadcast biz about the time I was starting to shave with a Gizmo called the Gates Sta-level that let the rock jock on WINO (Wonderful wino) cue records, bay at the moon, and scratch his nuts without the audience noticing. Sometimes called Soft Limiting.

If you ever wondered why commercials are loud, they use a limiter that is the essence of hard limiting or clipping and is in fact usually called a Brick Wall Limiter. Let the signal bounce off the limiter, filter the harmonics, and blast away until the peak-average is about 1.5 to 1 and literally triples audio punch with the same Disembodied Spirit effect. Most CB rigs do this as a matter of course although not to that degree. So limiter clipping is stupeed!

So I guess the question, Brian, is where swing fits into the traditional scheme to improve AM communication capability. How about a touch of reverb :-)

They were?

I looked up the owner of Xforce he is not a Ham, I looked up the owner of Davemade he is not a Ham, I looked up the owner of Noname he is not a ham, I looked up the owner of Telstar amps he is not a ham, I looked up the owner of Cookie made amps, he is not a ham, I looked up the owner of joker amps and he is not a Ham so perhaps you can help us out and inform us of all these illegal map companies that are owned buy hams. .

3451. Re: Bias Voltage for 4CX350A?

Newsgroup: rec.radio.cb
Date: 2002-08-11 14:31:23 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3D56753B.467C96ED@qnet.com>
Source record: 132531

Hello Peter:

Thanks for the info and advice there.

I have the 4 each pots mounted, and now I am wiring them in. This will allow the separate Potentiometer to adjust the bias voltage a few volts either way, allowing for the no signal plate current to be the same, in all 4 tubes.

This home brew amp is a real beauty, it has a killer over designed power supply, which is rated at 2200 volts at 3 amps, I wired the transformer for 220 VAC operation. It has a Grid Voltage and matching Plate Current Meters along with the Bird Watt meter "Meter" that is round, mounted next to the square Grid and Plate Meters. The Forward watt meter slug is accessed from the front, but the reverse slug has to be changed by removing the bottom chassie plate. And the guy even had small peanut lights installed in the meters as back lighting, with a lighting control pot on the face of the amp. The band switching "Switch" is a new heavy duty Silver Plated Ceramic type switch, and is shaft coupled to the (RF isolated) input tuning tank circuits. Very cleaver.

The switch over or PTT antenna switching is all down with brand new Dowl type coax relays, wonder what those cost?????

It has a two power level inputs, 10 and 100 watts, that is selected from a switch on the front of the amp, don't know if I like that?

The Amp Chassie is painted in Bright Crinkle Green paint and looks great, especially with the meters back lights on. Somebody spent a lot of time and money an this amp, and it was only a hundred dollars, plus the luxury of physically hauling it to the car with a large grin on my face. Its taken about a year to get all the parts that will fit. The power supply filter capacitors had to be replaced. The last part was the Pi Network Tuning Capacitor, that a Vacuum Variable fit in nicely, but left me down in funds for a few months, ... ouch! But this completed the missing parts, and allowed me to fire her up.

Thanks for all the inputs and suggestions, and e-mails. Sure is nice to get accurate technical info.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

111 Degree's F yesterday.....

There was no question asked from you Tnom, you made a statement that I don't
have a clue who owns this and that.
I replied "You think so tnom how about I give you some name would you know
who they are? Well
If you don't care who they are why do you want to hear who they are, or are
you just like the guy who said hams all started illegal amp companys.

Well, got tired of my" high powered cb" only knocking 2-3 helicopters a week out of the sky, so i thought of something better. I just finished building a 10 ft tall tesla coil in my garage. I cant wait to fire the sucker up. With all the broad spectrum noise and harmonics it will generate, i should be able to easily knock 10 to 15 helicopters out of the sky. I want to thank all the hambos out there that gave me this great idea,because of their assertion that "harmonics " are capable of downing aircraft. Cool deal ! Hell, might even get a few high performance aircraft while im at it!!!! :) gunslinger

==

DSB is any signal which carries both sidebands... including AM and FM, so bandwidth is twice that of SSB.
You can have Suppressed Carrier DSB, but the bandwidth is still the same as for AM.
I cannot see the point in SC DSB for communications such as CB etc. As you would still have to re-insert the carrier, you may as well go for the more efficient SSB.

Regards,

Peter.

A few years back, when I was working in a small workshop with very few windows, it was a hot summer and the heat from the 'scopes, IFR, sig gens, etc just added to the heat. What made it worse was when I had to work in the cage to limit inteference from a local transmitter.

Working in a kitchen or other place where extreme heat is part of the process, during a hot summer, must really suck.

Wrong...

Novices and tech plusses are permitted voice privileges, as well as CW, on
10 meters, and CW only on 15, 40, and 80.

Furthermore, "No-Code" techs (the new techs), after passing a morse exam,
who haven't passed the General Theory yet, are permitted the same
privileges while their code certificate is valid, a period of one year.

Get your story straight.. Check out
http://www.icomamerica.com/downloads/bandchar.pdf before you look silly
again...

These tubes have a control grid dissipation rating of 0 per Eimac. I
would strongly suggest some way to monitor (the lack of) grid current or
it could get expensive in a big hurry.

I personally couldn't care less who they are, but from the standpoint
of exposing you as a braggart it might get interesting. The point is
that you can't back up your original statement with some names.
You are a braggart. Prove me wrong.

Examples of "loaded" 5/8 wave antennas:

Some of the Firesticks
Wilson SilverLoad antennas.

The coils in these helically wound fiberglass supported antennas do indeed radiate, but not as well as a 22' whip with the proper L/C matching circuitry at the feedpoint.

But, Dick, you knew that already.

Getting a HAM license doesn't give you the right to talk on the "freeband",
nor does it give you the right to talk to unlicensed operators on the 10 or
12 meter bands...

You'd best study a little harder, and get rid of these ill conceived
notions you have..

Of course, but when you have a 5' or so stick of fibreglass and wrap it artistically with wire just what makes it a 5/8, a 1/4 wave, or 3/4 over 3/4 colinear? Damfino

3495. Re: Why are "Final" transistors called PLL's?

Richard:

True..

Old novices who get the new "no code" tech license still retain their privileges on the HF bands.

New "no-code" techs who have not held a license previously, who have passed the code test but not the General Theory, have the old novice priv's on HF for a period of one year (the duration of the validity of their CW test cert), or so it has been explained to me. I could have been misinformed, however.

Why should anyone get pissed off? You bought a legal upfront piece of
gear.
You are, of course, a classic moron -- that is not a rig you refer to with
deadkey AM -- so it is a fair bet you will have it burned to a crisp in no
time. I will assume it has been opened up for 11 meters for that purpose.

So now you have a rig capable of all sorts of things, no license to use it
where the action is or will be in a few years when the spots go down and
an attitude that would flatten a rhino.

Pin a rose on your nose.

That's a little misleading. Both "ham 10M" and "the non-regular 40" are illegal for unlicensed use. So why the double standard? Why should he ignore one law and obey another? If he can use the freeband at his own risk, why shouldn't he use 10M at own his risk? (rhetorically speaking)

to
> > the bank!

Don't count on it. Mr. "Herbie's" return to the air is predicated on his
(as he put it) "learning the
hard way", and that "being off the air was the supreme punishment". When
he gets back on the
air, he'd better behave himself. The Amateur community begged for years for
strict enforcement and the weeding out of those who would make another
lawless "CB" band out of ham radio. Mr
Shoenbaum (sic?) was a a product of the days when FCC didn't really care
about ham and CB.
I would be willing to bet that, if those who were part of that "old" gang
are waiting with bated breath for the "old" days, they are going to be in
for a surprise. Not only Mr. Hollingsworth won't
tolerate such shenanagins again, but the Amateur community as a whole won't
have it either. Things
are changing, and clowns are going to be painting on sad faces in the coming
months.

J

Message-ID: <3D56D299.6C51149@yaSPAMhoo.com>
Source record: 132488

My .02: I have run Firestik KW-7's for years after trying what was
around back then (mid '80's). My RS magmount gave way to a K-40
magmount, which I traded an extra one for a KW-7. I put that
thang on my bumper with an RS dual-chain bumper mount. It was
about that time I got my PC-122. Skip cycle on the rise, I was
a DXing foole! Then I got a New Mosquito. It was a 1969 in a
small case about the size of a pack of smokes. One red pushbutton.
That was enough at the time to make a difference. Sounded like
sh!t on AM, kicked on SSB...

(Time warp to present)

I have since tried other antennas, grounding the mount, braid
to lid to metal, ground bypass on coax six feet from end, and
no antenna has performed as well with an acceptable (1.5:1 or less),
except a KW-7. I'll stick with what works, on 3 different vehicles.

I must miss your point. The bike could do the quarter mile in the 11 - 12 second range. Assume you just did 1/8 mile and were going 120 miles per hour. Guess what? If you take the pedal off the metal and simply keep it at 120, you are going to turn in a NINE second quarter mile. The guy ended up having to sell the car because he was driving in his model A with his wife. A Harley tried to take him from a stop light, he opened it up a bit too much, pulled a wheelie, and his wife suffered whiplash. They showed up at a party that I was at. She was in a neckbrace and he offered to sell me the car for ten grand. I couldn't do it (besides, I would have had domestic problems from that transaction myself). Do the math. 6 seconds have elapsed. You are doing 120 miles per hour. That is 2 miles per 60 seconds (1 minute), 1 mile per 30 seconds, 1/2 mile per 15 seconds, 1/4 miles per 7.5 seconds, and 1/8 mile in 3.75 seconds. Add 3.75 seconds to the 6 seconds (ok, close to 10 seconds). My guess is that if he or you wanted to bet by the foot, he'd keep the pedal to the metal and you'd likely see him doing quite a bit more than 120 miles per hour and you'd likely see that 1/4 mile in less the 9 seconds. The whole thing is weight vs horsepower (oh, and with the unlimiteds a LONG wheel base to develope something to counter the tremendous torque at the rear wheels). I don't know what the car weighed; it had no hood and no doors. No cab. It was essentially a 600 horsepower engine on wheels (ok, 550 horsepower measured at the rear wheels). It was used for serious racing as well as show. BTW, all the Harley saw was smoke, burning rubber, and tail lights. Ron's wife gave him the choice; either that car went, or he went and she'd keep the house, the boat, etc.

73 from Rochester, NY
Jim

ps - why don't you take that nip bike and show the rails how to do it at the races?

Lou, you should note on your chart what the other
assignments are for the frequencies listed. Things
like ham, CAP, broadcast remote and such. There are
things that are usable, one just must search.

Phew.
Well spotted, I knew someone who had a big Yaesu which kept blowing
the mains fuse. He decided that the way to stop it happening was a bigger
fuse. It cooked the transformer... Ouch.

Regards,

Peter.

Hi Brainbuster,

DSB is a signal which includes 2 SB signals, usually with supressed carrier, the lower sideband and the upper sideband being used at the same
time but with different audiocontent, for reception you need to have both sidebandfilters and to generate the carrier as usual.
The signal contains no AM no FM, the bandwith is twice one sidebands width.

Hi Jay,

Well, you did a very good deal with that amp for shure,
the Bird Wattmeter with 2 slugs and the dowkey coaxrelais being very
expensive already and as I understand everything else is first class !
Very good also with the power supply rating, so the 2200V are there
with full load.
For the 100W drive input there will be an attenuator switched in, this
is quite useful when using a standard transceiver of the 100W class.
Please watch grid current while driving with low power, there may me NO
CURRENT at all !
The tubes have Zero Watts grid dissipation and would burn out soon at
their grids !
I understand vacuum variable capacitors are sometimes more expensive in
the states as overhere in germany, but I bought also some on ebay USA.

Nice temperature overthere, just 85 here and tons of rain...

If they are licensed hams on 10 meters complying with Part 97, then
they are not bootlegging on unauthorized frequencies. Your point?

FWIW, I am licensed amateur. The gist of the post was not meant for
anyone with a brain to take literally. It was meant for the dolts that
hang out in here, and on eBay.

Thanks for all the replies to my posting. I found out Saturday after taking the radio to a CB repair shop here in Mich that the radio was a 10 meter conversion. They told me whoever did the job knew what the hell he was doing. They installed a freq board and tuned it for the 10 meter band. The tech was impressed that the radio looked brand new and said it was in perfect working condition. I could care less, I have no desire to become a Ham operator. I thought I was getting a good deal on a 40 ch ssb radio, I should of knew better, when the girl told me all the stuff at the sale was from her departed fathers home who used to be a HAM. Well I have no use for this type of radio. Any
Trades? Looking for a 40 ch ssb radio that works. The radio I have is 40 ch ROADTALKER/RAIDER SIDEBANDER. The cb shop said it is based on the Sears Roadtalker models.

Nice rig Michael.....I have had several here on the bench. Also the Pro and Pro II. If you use it on AM, give it some "breathing room". Roll it back to around 25-35 watts. It should peak around 60 or so with audio. I would not push it in any of the 100% duty cycle modes! Good luck.

Waaaaaaal, Jim,

Actually, there are still a few AMers around on 3895, 7290-95, and 29.000.
I am not a regular
AMer, but I join in with the fellas from time to time. It is something
different, and is actually fun.

Flame away if you like, but I've been wondering lately if CB'ers abandon the bad habits learned from CB when they get ham licenses, or if they merely extend them into the ham radio hobby. So here's a question, and this one's a multiple choice. Complete the following sentence using either A, B, C, or D.

If I got a ham license, I would:

A) Obey the rules, as long as it didn't inconvenience me.

B) Obey only the rules I agree with.

C) Obey the rules, because they are the rules.

D) Obey the rules because it helps make the radio hobby a better experience for everyone.

Hi Peter.

What you describe as DSB was called ISB (Independent Sideband) last I looked.

When Art Collins was selling his SSB system to the US Air Force Strategic Air Command, General Electric was selling a system of DSB which was just as described, AM with a suppressed carrier, which they proposed to use with synchronous detection to allow, among a lot of other things, channel spacing at 2 kHz. Yes, channels were overlapped but as the story ran the output would be that identical to both sides so interference was ignored. So it was not the bandwidth hog one might expect. It really did not work with vacuum-tube technology.

Because DSB is so easy to generate it was used during the dying days of AM on the ham bands. One tunes it like SSB but it is more critical.

Surprisingly, because there is really no reason for it, the Stereo and SAP (second audio program) subcarriers on U.S. analog television signals are DSB rather than FM as one would reasonably expect. And there is some interstitial DSB being used in the VHF region between the FM channels, again with synchronous detection and for the moment only a partially suppressed carrier.

This is one of those terminology issues for which electronics is famous.

If he uses 10M frequencies, he'll piss off alot of HAMs in his area, and
will get caught.

If he freebands, he may or may not get caught.

Personally, I don't care if he freebands, that's his choice. However, if he
decides to wander into territory that others (myself included) have earned
the liberty to transmit on, he's just begging for trouble.

Besides, Voob... You are still misleading people... don't try to push that
onus off on someone else. You're not clever enough to win that particular
debate.

D. The FCC doesn't make rules for rules sake. If followed, they really do make the radio more enjoyable for everyobody. Taken down to their essence, they simply state "Be good to your neighbor".

The guy who built my motorcycle has a set of shop rules. The first one reads: "Rule number one - Rules are for idiots". If people, by their good nature operated in a responsible manner, there would be no need for rules. When idiots do stupid things because "the rules don't say I can't", then a new rule gets created. Before the FCC even existed, early amateurs toyed around with spark gap transmitters. These consumed enormous amounts of bandwidth, and caused alot of interference. Now, I doubt these amateurs were deliberately causing interference. They probably didn't know any better. That brings up another cause for rules: Ignorance. That's not a put-down, either. Not everybody knows everything. Many rules exist to protect the ignorant from themselves, and they can protect others from the ignorant. In a way, this is a good thing. Later on, when you develop in your understanding of how certain things work, you will say "Ah! THAT'S why that rule is there!"

Perhaps after you have achieved a great deal of knowledge in a certain area, you still don't see the reason for a particular rule. Do you disobey the rule? No! You seek to change it. An example of this that I've

just recently become aware of is the new amateur code requirements. I was astonished to learn that today, you can hold an Amateur Extra class license, and only have to demonstrate a mere 5wpm. Wow! Before this rule change, I think it was like 20wpm. Now, what if it still was? And what if people said "the hell with it" and used frequencies only available to Extra Class holders? Isn't it better that a group of people saw a rule they thought was silly, and got it changed? THAT'S the way is should work.

(Side note: Personally, I think 5wpm is kind of silly. Still, I'm not complaining. It WILL make getting an Extra Class ticket much easier. It just won't feel like as much of an accomplishment, that's all. And I tip my hat to the old-timers who REALLY earned that distinction.)

If you can't get a rule changed, and feel VERY strongly about your position you can disregard the rule. BUT and I mean a *BIG* BUT - you also *have* to be willing to accept the consequences for breaking the rule. Our founding fathers disregarded some rules, but there is a difference: The issues at hand to them were so fundamental (freedom, etc) that they were willing to die for what they believed in. They were willing to suffer the consequences for breaking the rules. Do I wish I could run a linear on CB? Yes. Am I willing to fork over $7,000 in penalties for my wish? Hell no. So rather than BREAK the rules, I have decided to work WITH them. The rules say that if I become a licensed Amateur, I can legally do many of the things that I want to (like use more power, frequencies, etc). Is that too much to ask? I would be a real mental pussy if I said "It's too hard to get a license". Saying that is akin to saying "I'm too stupid to learn something new". Please.

I can't wait.

-Alan S.

1. Thanks for the complement but 20 wpm at the time and place I did it was
not the grim scene it might appear to be today. But those blizzards as we
walked and crawled on our knees to the FCC office uphill in both
directions...

2. I am willing to help anyone but the reality is that I am both older and farther away from the scene than some others. The guy you want to waylay is Bert WA2SI (Watusi) one of the many groupies who has done the full monty recently.

3. I also think the 5wpm is silly but the international treaty governing radio DEFINES an amateur as coded so until the Gnomes of Geneva get together to fix it in 2003 - and it is far from a done deal, it has been postponed twice before -- the code will be with us.

Dick N&#65533;BK

So you are advising him to obey the law in places where there is a high chance of getting caught, but to take a risk in places where there is a low chance of getting caught. Do you agree with that?

>Personally, I don't care if he freebands, that's his choice.

>(myself included) have earned the liberty to transmit on,
>he's just begging for trouble.

A number of Fixed/Mobile,Government, Research, and Commercial users also have been assigned "territory" that they have "earned". They have the liberty to transmit on their assigned frequencies at 26.1-26.965 and 27.405-28.0. Or do you disagree with that?

I was talking to some guy down in the Caribbean for an hour earlier
on 50.4 MHz AM, using the radio's spec max of 40 watts. The radio was
cool, and we heard each other pretty good considering I was using a
Comet GP-15 vertical antenna. (and this one is for you Voobner) When I
go down to 11 meters I only use about 10 watts. It's enough to get out
with my old Solarcon-99 60' in the air.

OK, but you said:

>>Personally, I don't care if he freebands, that's his choice.
>>However, if he decides to wander into territory that others
>>(myself included) have earned the liberty to transmit on,
>>he's just begging for trouble.

And I pointed out that the so-called "freeband" is ALSO territory
likewise owned by legitimate users that have ALSO earned the liberty
to transmit there. Just like you did. Same FCC that granted you a
license to use your frequencies granted these people a license to use
their frequencies. Knowing this, why do you advise him to risk
trespassing on the neighbors territory - but not yours?

Hi Dick,

You are right, as I described it, it is ISB which in fact is DSB but
with independant audio in the upper / lower sideband.
With DSB you get supressed carrier and the same modulation in both
sidebands. So with that if one sideband is covered by qrm you still have
the other one to copy.

Here in Germany analog television generally is AM, interesting what you
write about the SAP and stereo subcarriers. I do not know too much about
our commercial systems but maybe it is likewise, I will find out

In DSB the audio content of both sidebands is the same. You may be
thinking of ISB.

In U.S. and I believe most FM broadcast systems the four subcarriers are FM, the stereo, what we call the SCA, a third one that wasn't used a lot and the new fourth one that I am not all that familiar with that tells one what he is tuned to and what is playing which is some sort of digital.

The Japanese, who also use our NTSC analog system (which really does not stand for Not The Same Color:-)) put the stereo etc on their TV long before we did and they used the same standard for TV which made a lot of sense given that they really start out identically. But for some unknown reason, perhaps to help what at that time was a dying industry, the US FCC in its infinite wisdom made the TV subcarriers DSB. I would doubt that anyone else followed suit.

Right there he said "10 meters", nothing about 11.
You are acting just like Aaron and trying to put something
into it that isn't there.

Yes, this said from someone that assumed a
name of a person that used a big amp, right Prozac.
Also has claimed many times to know all the amp
builders, but yet they are still in business. Also has
claimed to run the very said amps, quite a testimonial.

The only person who is assuming is you Landshark, I don't know all the amp builders I know there names they have been posted in this NG and a very handy Book i got with all keyclown names in it. LOL, I also never said I ran "any amps" my radio puts out a little over 100 watts which is more than enough the bands I talk on so go ahead with your bad self make up some more lies.

Hello Dick: (Beer Keg)

Yes good call there I have found my book written by Eimac, "The Care and Feeding of Power Grid Tubes" well worth the price of admission.

I think I want to install some clamping diodes in the grid circuit that will not allow the input voltage to drive the Control Grids positive, but I am not familiar with the type of diodes that will do this. And I want the diodes to conduct before the voltage goes positive, and I want the world on a platter. So I am scanning the ARRL and Orr's books as we speak.

And a I want a latch circuit to turn off the input signal should a positive voltage be detected. I am open to suggestions ect. I am sure I need a fast reaction time diodes. I do not believe the diodes will add any spurious signals as they will not be conduction, and when they do, the amp will Baron Automatically shut down.

The tubes came new in the boxes here and I agree, ... I surly don't want to call the boys at RF Gain & Incredo Big Tubes R Us / Big Buck$ Inc. and order up a batch of em!

Delays Delays.....

Source record: 132607

There's lots of ways to do it including a bridge with an op amp across it
that does something violent if it is overdriven. Lots of beam tubes have
gone to the landfill because of grid current from overdrive. 6146's
subjected to too much grid current make admirable shotgun targets.

Look up simple grid current metering circuits and let your fertile brain
wander. Depending on what you are using to drive it, you might consider
ALC.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1373008977
Excellent looking General Coverage Transceiver... 1.5~30 megahertz
continuous coverage. Output is 100 watts on FM and SSB, 25 watts on
AM, Digital Readout, Built-in AC power supply (or use 13.8 volts DC) A
BIG RADIO at 41 pounds, Cost was $2,900 not including options in 1982.
All solid-state, no tubes, no tune-up, reserve is only $250... Use
"Buy it Now" and I'll throw in a D-104 FREE... Just add an antenna...
great for short wave listening and/or the perfect radio for that new
ham license you have been thinking about getting. Thanks for looking!

"Ask me, I'll tell you how"

LMAO!!!!!

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

I'm not trolling your posts George, you asked a question
with intent on trying to infuse operating on 11 meters. He
explained it was a stock 2510 and how he used it, but like
Aaron you were trolling and trying to infer something other
than what was typed.
So who's the troll George?
> --

"Ask me, and I'll show you how"

Too funny. You just can never hold a civil debate, every time
you get cornered you come back with some sort of insult
or sexual innuendo, no matter who it is.

Landshark

Well, I must again conclude with JerryO's ascertations to a certain extent. Hollingsworth is personable and very easy to get along with, but let's get to the meat of the matter. It is not he alone that decides what enforcement will be, or where. Matter of fact, he has way less authority than is attributed him. The best word to describe his actual day-to-day function is "liason."
He also agrees that with the suncycle on a downward shift, cb complaints will remain basically what they have always been...a non-issue save for safety and severe repeated interference complaints and those drop with the skip conditions.
An anticipated return to what he believes is the loftiest goal before the FCC concerning hobby radio service, enforcement of amateur related activities, is his primary concern. They have more potential to do harm and have always done so when compared to cb.
Concerning the truckstops selling cb, Jerry, I don't know where you received your information but Mr. Hollingsworth claimed that even IF the money was there to mount a campaign for what you claim, he would do his best to find a better use for it...such as an EDUCATION blitz. The MANDATORY initial certified warnings that are sent out to offenders are paid for from the "educational" fund. Any step beyond that is an entire different ballgame and is only one of many reasons for forfeiture and fines...an attempt to recoup the dollar spent.
Cb has never been the concern to the FCC you have been putting forth, Jerry. Hollingsworth actually spoke of the overzealousness that self-consumes way too many hammies, and literally stated much of their behavior is WORSE than the cb "problem" they are presenting to report.
He also has a sense of humor, shown by his statement that if the frustration level of many hammies who bother the FCC with trivial complaints concerning cb could be bottled and sold, the gases would be toxic.
One last note...Jerry, you claimed a rise in enforcement "pretty soon."..............
If you know something he doesnt, give him a call and fill him in. Unless a private large windfall of a donation is dropped in their lap earmarked specifically for cb enforcement, the cash is not there for any raid-type commando operations on truck stops nation wide. On the matter of public record for disbursements
(that doesn't cost a plump nickel if you know where to look), the money for the duration of Bush' first and last term is already accounted for and if you would be so kind as to call your associate he would be more than happy to confirm what I just relayed to you, including clueing you in that not only are funds not available for a sole enforcement cb campaign, but NOTHING warrants it, especially a handful of hammies that pretend to be an angry mob of John Q. Public. Deceit has never worked

but the truth will set you free. There is even a deficit in the FCC's budget through the end of the lil' shrub's one term. Beyond that, the knights in shining armor that you hailed as the almighty saviors are looking for greener pastures, as they know their positions are dust come next presidential election.
My favorite verbatim quote: "Maybe if some of these amateurs (and I use the term loosely) were billed for the unproductive time spent by the FCC responding to their petty complaints some of the foolishness would stop."
Hint: When he spoke of foolishness, he wasn't referring to cbers.
Now if you'll excuse me, I have a driver to warm up and a DX call to make to the coal country.

And by the way, I used a stock Cobra 148 and a Uniden PC-244 (I think?) SSB radios on 11m. I think the FCC rule against VFO's are stupid, since not having an unlocked clarifier was a pain in the butt.

But, that's all in the past. I don't have those radios any more, and don't have any interest in CB. However, I think it would be fun to find another 2510 and operate on 10 meters mobile again.

Tom

Twist, I think that a few of the amateurs have also been nervous about crying to the FCC without darn good information. That wastes FCC time and money (OUR money). Reality check - the FCC is another part of big government which is generally run by special interests. Aside from that, I think the important deal is going to be in educating people. I get nervous when I see a coworker trying his marine radio (while the boat sits on it's trailer in his driveway!) to see who he can talk to. Fact is, the average consumer is totally clueless about communications - they are only interested in using whatever toy they can buy (hoola hoops one decade, pet rocks another, now scanners and radios). Interesting post.

True, but it is a small group and is concerned with am as a 'cute mode' not unlike cw enthusiasts (which, although very dated at least does not consume a ton of bandwidth). Then again, there are some uses for cw (like high speed cw for meteor burst work - hundreds of words per minute).

I just emailed Riley about Twisted's alleged call, if, indeed, he did call. The following is Riley's
answer. Note that there is NO "education" fund, which, Twisted, makes me believe you never
actually talked with him. The initial actions against Flying J and Pilot (and some others) are part
of FCC's public records which can be read by typing in "Field Enforcement Actions". So this
is already been done. It is quite obvious that they don't believe that they can be fined for selling
the sh**, so according to MY conversation with the "man", further actions are planned against
them. And others are to follow. I am now merely going to sit back and watch. Time WILL tell
who is actually right.

Jerry

The accuracy of that is about 10%. What will probably happen is this: the CB freebanders ones overpower will keep it up and cause so much public outcry and interference that they'll draw the wrath of enforcement. Then they'll be bitching and moaning about government interference, when they brought it on themselves. Other notes: there is no "education fund". And, there has to be spectrum rules just as we have to have road rules. CB could contribute a lot to public communications needs instead of shooting itself in the foot all the time and being a laughing stock.

Aaron, it is labeled 'amateur' amplifier. Which means it is legal to sell, IF it is certified. I note it can be drivin with low power. For your perusal:

Sec. 97.317 Standards for certification of external RF power amplifiers.

(a) To receive a grant of certification, the amplifier must satisfy the spurious emission standards of Sec. 97.307(d) or (e) of this part, as applicable, when the amplifier is:
(1) Operated at its full output power;
(2) Placed in the ``standby'' or ``off'' positions, but still connected to the transmitter; and
(3) Driven with at least 50 W mean RF input power (unless higher drive level is specified.)
(b) To receive a grant of certification, the amplifier must not be capable of operation on any frequency or frequencies between 24 MHz and 35

So, care to venture a guess as to its' status as being certified?

73 from Rochester, NY
Jim

Not around here (central California), that's for sure. Channel 17 is absolutely over crowded, and you can hear the local base stations rag-chewing on 28 all day long.

This may sound kinda silly, but what kind of antenna did you hook up to that Cobra base of yours? I dunno. Maybe it will explain why you heard so little.

Alan's handy-dandy super-duper searching secrets:

******
1.) Use Google. It is, hands down, the finest search engine in existence.
2.) Imagine what words you would expect to find on the page containing
the information you need. Put these words in your query.
3.) If you are almost certain that a particular phrase would likely
appear on a page, then quote the phrase, i.e. "pa speaker".
4.) Google supports Boolean queries. Use them. The AND operator is
assumed. The NOT operator is designated with a "-" before the word. So
for example, if I don't want results that have the word "cobra" in them,
I use -cobra.
******

For your problem, I structured my query exactly as follows:
external "pa speaker" weatherproof -cobra

This could have also been structured as:
external +"pa speaker" +weatherproof -cobra

Tranlsated into plain English, this query reads:
Show me pages that contain the word "external" AND the phrase "pa
speaker" AND the word "weatherproof" that do NOT have the word "cobra".

Boolean logic rocks =)

Like I said before, the AND operator "+" is assumed, so you don't really
need to use it.

My query gave me 12 results, one of which was:
http://www.procommproducts.com/speakers.html (This should be what your
looking for.)

Check out http://www.google.com/help/ for more options.

Hope this helps you next time you need to search for something!

Hey Jim, earlier I found a couple of exceptions to the certification
requirement: (Section 97.315)
http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=97
&SECTION=315&YEAR=2001&TYPE=TEXT

I'm not sure they apply to this amp or not, however.

It's not dead, but it's really quiet where I live up north of Seattle. I got into CB in about 1992, and it was a lot more active than it is now. The fact is that you can hardly find any retail stores that carry CB's any more, so there aren't as many new people getting into CB. Instead they are using cell phones and FRS radios.

Personally, I hear a lot more chatter on my FRS handheld than I do on my CB. That's pretty sad considering that the range on FRS is about 1 mile on a good day.

>You may need an antenna,Scott.

No, I've got an OK mobile antenna. It's not a 1/4 wave whip or a
Wilson 1000, but it's a real decent mag mount. I live in an
apartment, so I don't have a base setup right now, but I used to pick
up stations all over the place on my mobile. I do hear some
activity, but not what I used to hear.

I really enjoyed CB back when I first go into it in the early 90's
when I was in high school. There were a lot of locals....got togther
for coffee breaks and fox hunts....it was a lot of fun. It gave me
the itch to get iinto amateur radio, but after investing a lot of time
and money it just bores me. All I hear are a bunch of local senior
citizens with their "geritol" roundtable nets talking about their
latest medical treatments, or whether or not they had a good BM this
morning. It's just pathetic.

A mobile antenna only works on a mobile. The thing you can hold
in your hand is only half the antenna. The car is the other half.
Try putting it on the 'fridge, an air duct, or a railing. It will
work fine upside down if you keep the coax away from the whip.

Hi Jay,

Remember, the general 4cx250b type amplifier layout should be constructed for AB1 or AB2 operation. Although it is possible to do both with one amplifier, it's better practice to construct and layout the circuit for only one operating point. I'm talking grid vs cathode drive layouts.

So you would assume linear AB1 operation is your goal... you have four tubes in parallel with no-load 2200 vdc anode potentials. You need to describe your drive/grid circuit layout for me. Adjust your control grid bias for the proper drive and zero signal anode currents with variations on the shunt (or active) regulated screen potential. Recomended zsac values are in many older ARRL Handbooks.

Dealing with four parallel tubes requires device (tube) matching and or some unbypassed cathode lead degeneration. AB1 operation requires a low impedance grid circuit... some pick 50 or 200 ohms depending on drive power. Other values are possible...

The heaters should be at 6.0 volts Operation at 6.3 volts is bad news.

The tank impedance is going to be very low, you will need to cool the tank with forced air, the coil diameter should be quite large.

If done properly, I've seen a 4 hole version output the "legal amateur limit" with ease. AB2 operation is a much better idea...

cheers

WOW! lol
--
<<

Ask Jerry what their (FCC) biggest problem is concerning hobby radio operators. He talks to the guy himself fairly regularly so I know he knows what time it is and I find it a bit odd he hasn;t mentioned it once. It's not cbers and the math ain;t that difficult. Special interests definitely control this puppy and unless Tauzin and some other cronies get some more cash dumped in their muzzles by some rich aristocrat that keeps hearing "Breaker Babooey" over and over through their hearing aid, cb ain't an issue to anyone but the clowns that make it one, and they have no grease. In other words, they're impotent. Rock on!

But Aaron, that's against the Rules. And it always has been. Are you
now encouraging it? Like you encouraged a guy to get his big linear
modified for 11m?

The point was: Stop wasting his time. Get a clue.

I notice you dropped out of the "eButt" thread as soon as someone
collaborated what I had been trying to tell you. Pretty lame. But
that's precisely what we expect from you, Aanal Aaron!

What in da hell?
Cryin' over a frequency chart?! Nigga-PLEASE!!
That's what you all sound like ---a bunch of niggers!!
The word Nigger is NOT about White nor Black ---It how one acts----IGNORANT!

Now that the mutual greeting has been taken care of....on with da show!!

Lou Franklin is COOL!
I like his catalogs -even if I have never bought anything.

I still don't see what that chart is doing to you!
You all acting like it was Kryptonite to Superman or saying that "Myxylplyk"
dude's name backwards!

Anyway, someone got their feelings hurt because they thought someone
directed a message to them when all it was..was just an error in the posting
sequence. that's all.

That "sean" dude was directing it to another post when "Power House" just
lost it all.
GEEZ!!

Anyway Quit crying over a CB frequency chart!
wasting bandwidth and taking up the whole newsgroup over what -----a CB
frequency chart.

CB does contribute plenty to public communications. Take a road trip, you'll see exactly what you do not know.

That line about "shooting itself in the foot and being a laughingstock" came from Riley himself. I merely cut and pasted it here. You would have to take Mr. H to task for that comment; I did not
make it.

I have NEVER said I was a LEO; all I have done is state what I have heard from Hollingsworth
in person. Just the other day, I had phoned him about "certain" issues where he informed me that
Flying J and Pilot are, in fact, about to receive more legal actions over their sales of so called
"10 Meter" radios. He just hit Roper Electronics and also a Mr McCreary over his use of an amplifier. I had nothing to do with that. All I can do and WILL do is document and report instances of illegal operations on the Amateur bands and the sales of illegal equipment at truck stops
and other outlets. Yes, I WILL take "breaks" while traveling at truck stops, and if I find those Galaxy and Connex "radios", I will send said evidence to the proper authorities whose job it IS
to do something about it.

We are NOT talking about what happens on the regular 40; my interest is the intrusion of unlicensed operators onto bands where they have no business. Y'all can do what you want to down on the 40--fry each others eyeballs with those BIG amps; whatever. I am doing only what
other hams are doing--even Richard McCollum with his picture machine; protecting what I worked
for from those who would just TAKE what they want. Whatever else happens as a result is just gravy. And as I said in my reply to your original post on the subject of RH, I am just going to sit
back and see what happens. I KNOW what Riley told me. I KNOW what I see on ARRL.org
and hear on RainReport. The focus is on the out of banders, the 10/12 meter bandits, not on what
happens on the regular 40. In fact,. WRT the regular 40 and the usual freebanders above 40 and

below 28.000, I figure those guys are pretty safe for now--and I've so stated. But those that operate on the ham bands without license, we will see.....we will see.....

Have a happy, happy!

Jerry

NO.
Did you check that your cb was operating properly?

Well, the internet kinda had a BIG affect on the CB. I live in
Sacramento, CA. Back in the 70's, 80, and early 90's, it was insane.
On any given night channel 12, 14, 15, 17, 22, and 27 would be crowded
with locals! Now, you may hear some truck drivers on 17 and a few
locals on Channel 27 and 8.

Yeah those were the channels, what happened to
40, used to be a lot of locals there. It was pretty active
this weekend on 17 & 19 when I rolled through.
Hey is Cobra still around?

ive just completed a very nice, easy to follow cd with plans to build 11 meter (CB) antennas, with MORE info on tune-ups, convertions, mic wiring, you name it...this thing is loaded with useful info on doing your own repairs and modifications. Explains how toos, and pdf file on home-kits and MORE...pictures are high quality, formulas, and do-nots that will get you up and sounding great...want to install your own talk-back, echo board, want to make your own swing-kit? well theres More, More, More (title of my cd) anyone interested, email me. Many hours and weekends compiling all this info in an easy to read format...Ive decided NOT to copyright this, as friends and 'Masters' have help write this/ you'll be amazed at how much you'll learn..
.'Golden Screwdriver' is a drop in the
bucket.... email me at horseflygk@att.net I'm 10-7, later

Depends on where you live. Here in San Diego, the locals are on 19 all the time along with the truckers driving through. The other channels are alive mostly with Mexico and South America coming in Spanish speaking. On lower side band, any channel from 35 through 40, mostly 38 you get during the day the whole country come in as well with Canada, Puerto Rico, Costa Rica and in the evenings you get Hawaii, Australia, Tazmania and other Pacific islands. Earlier this year the spots were probably at their highest, and lately it's been getting weird and sporadic.

Just wondering if xgannon is a Ham only thing. It seems the high and mighty wannabe Hams are so pure they have to use anonymous remailers to insult people.
The idea the someone could operate totally legal on any band yet disregard basic internet rulz of behavior is ludicrous. There are allot of Hams that contribute greatly to this newsgroup. But a small minority just hate cb in all it's forms.
Ken

Depends on what part of the country you live in. Some areas are still booming. Others, are well, not so booming (Unless the skip is in).

It's also possible that during the 4 years that your radio (and antenna) were in "hibernation", that something "broke". Radio parts drift with age, and particularly with non-use. Your antenna may have been subject to physical damage, or a lightning strike, or squirrels could've chewed the coax cable.

A quick test would be to turn to channel 19. If you live anywhere near a major highway, it's a fair bet that you should hear trucker traffic. If all you still hear is static, I'd suspect that your setup has problems. At the very least, check the SWR.

Textually, yes, it was directed at another, but because of what I stated, it was also directed at me.

> you have only forseen someone was after you. When in REALITY--it was just
a
> small mistake :) Smile! You'll Be Alright.

No one is after me, nor did I think that way.

>
> Guy, we make small mistakes in our lives -whether you have accepted it or
> not- don't call others "dip-shit"!
> When have you EVER made a mistake?
> When have you NOT EVER made a mistake?

Anybody who replies to (and quotes within that reply) someones posting, yet references a totally different individual, as well as a totally different post, deserves to be called a dip-shit. Actually, a better term might just be dumb-shit, but I won't get into that in this post.

A mistake? How can you reply to someone elses post in mistake? Obviously you are reading the post at that moment, so why would you totally jump to another thought and just hit the reply button out of the blue? Don't you even read what you reply to? Perhaps you have some sort of disorder that you don't actually comprehend a post until you are two or three post beyond it, at which time you just decide to hit reply where ever you may be? No

wonder half the damn posts in this group don't make any sense, and have replies that have absolutely nothing to do with the text that is quoted within it.

The only one who lost it around here is you... I stand by my opinion. If
you aren't replying to the poster of the message you are currently on,
refrain from hitting the reply button. A delayed intelligence is no excuse!
Go back to the message that you finally comprehended 4 messages later, and
reply to it. Don't just hit reply where ever the hell you are at...

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

Well in your trolling way your correct. Here they
can do almost anything they want without getting there
license taken away. Take George for example, do you
think he says the same words over the Ham Bands?
Doubt it. Do you think they would let Aaron Spam the
airwaves with that nonsense that got his last account yanked?
Not a chance.
I don't think they hate cb's, they are just troll's, kind of
like you do, but a more aggressive style of foul language,
sexual innuendos, spamming, flooding the newsgroup.

> static.Is the c.b. officially dead now?

check it mo. cbs are still being used. we use them to talk to each other while driving our trucks down the superslab. and if we (God forbid) venture into the 10 meter ham areas. All I can say is, I am reaaaaaaaaaaaaaaaaaaaallllllllllll sorry about that. And also we use our cbs to agitate punks like Frank, Jerry, Dick and the other joe smoes who seem to like to hang out here. Also sometimes we fire up our big radios and challenge each other to see who is king of the mountain. Can you smell what cheese is cookin?

3684. Re: does anyone use cb's anymore?(ABSOLUTELY!)

I wouldn't do without mine. I carry my cell phone always, but CB is still my preferred mode of communication, even over my home phone! Only talk to one person at a time? How boring! I'm lucky enough to live in an area where CB'ing has taken off like I haven't seen it since the early 80's!

>JerryO wrote:
"I have NEVER said I was a LEO; all I have done is state what I have heard from Hollingsworth
in person. Just the other day, I had phoned him about "certain" issues where he informed me that
Flying J and Pilot are, in fact, about to receive more legal actions over their sales of so called
"10 Meter" radios. He just hit Roper Electronics and also a Mr McCreary over his use of an amplifier. I had nothing to do with that. All I can do and WILL do is document and report instances of illegal operations on the Amateur bands and the sales of illegal equipment at truck stops and other outlets."
<<

No problem there, Jer!
Each year the feds hit a certain amount of turnkey mod shops and fly-by night dealers. The bottom line is the fines aren't large enough to put the larger places (like Flying J) out of business. You think that coincidental?

>Yes, I WILL take "breaks" while traveling at truck stops, and if I find those Galaxy and Connex "radios", I will send said evidence to the proper authorities whose job it IS to do something about it. We are NOT talking about what happens on the regular 40; my interest is the intrusion of unlicensed operators onto bands where they have no business. Y'all can do what you want to down on the 40--fry each others eyeballs with those BIG amps; whatever.
<<

I'm not into BIG amps and never was. My posts reflect such except the part where I told one of you angry hammies you would get squashed if you acted like that on 11 meter, and it was in direct response to the sheer malice directed toward the board by his single angry post.
In the past, Jerry, you have claimed to defend your territory vigorously with no problems from any cbers present. As a matter of FACT and of RECORD (which can be verified through the archives) you have NEVER been opposed, nor has any other on this board, for taking a stance against illegal intrusion into the hammie bands, yet that seems to be your repeated catalyst of choice for assailing exports and you continue to bring it up, blaming cbers and radios instead of those individuals responsible.
You claim the hammies need to follow the rules, but your one sided arguments presented leaves the question of why you fail to "hunt"down amateurs operating out of band, such as on the cb band the way you attempt to hunt cbers......going by what your associate Riley said, they

are way higher on the priority ladder than cbers...go on...ask him, since you have now stated that you are doubting what I say, get it from the horses mouth. Methinks you don't like the answers he gave you, but I know you were told the same thing I was. Your failing to even address it shows a severe reluctance on your part to acknowledge it and present a clear and concise view of the enforcement picture. Certainly some trucksops may get hit, but you are not presenting AT ALL what their main focus is concerning hobby radio operators, and that is because it isn't cb at all, it's ham operators. You have avoided it like the plague attempting to imply or convey the message to the masses that cb amps and freebanding is a priority for the feds. Nothing is further from the truth. Hammie ops are light years ahead in the trouble ausing department when compared to cbers..if you're taking issue with that statement, your issue is with your associate at the FCC, not me. Once again, just ask him.
Also, It is your about face you have done lately that has me perplexed. In a recent thread you included freebanders in your targets. This is looking for trouble, nothing more.
Your excuse that "they MAY wander into "your" territory" is bullshit, you know it, and so does the rest of the world which is why you have received a rash of dung lately on this board. It took me a while to catch up on over 3 weeks of posts, but when I saw your posts in a hammie forum, the poster was right, you are out doing your damndest to denigrate cb. You did the same thing on a truckers forum and I figured you were blowing off steam, but you appear to have went whole hog into fantasy island's realm lately and it appears you are battling for fifedom with the other 2 pipers

>I am doing only what other hams are doing--even Richard McCollum with his picture machine; protecting what I worked for from those who would just TAKE what they want.
<<

What another does is irelevant.
But since you mention it, Dick isn't chasing freebanders or amp users, merely defending his territory and that which affects him. He's not balled up over "what if" scenarios that MAY affect him and IF he went chasing rainbows.
On a pertinent note, you have nothing to do with the freeband where most of us "lawbreakers" ragchew and DX and you are not a LEO, yet you concern yourself with something which you have no control over. You didn't work for jack in the freeband, so it has nothing to do with what "you worked for. If you would have left it at where you used to leave it, I wouldn't say a word, but ask 'ol Riley what plans, if any, are for 27.555 and make absolutely sure you share his response with us.
Somehow I don't think you will share the response, as it isn't what you want to hear and you appear to only post when it confirms a negative concerning cb.

>Whatever else happens as a result is just gravy. And as I said in my reply to your original post on the subject of RH, I am just going to sit

back and see what happens. I KNOW what Riley told me.
<<

And I never doubted you, Jerry.
Plus, I know what Riley told me, which is why you adamantly refuse to ask him and report back to us what his number one goal is as liason to amateur radio.
I do however, feel he is giving superb lip service to his constituents that seek it. After all, there is a certain amount, albeit miniscule, of a psuedo-political voice from within the amateur radio patch wearing, title-hugging members and they must feel they have SOME representation so they don't realize they are being screwed by their own....it;s the same thing we see on this forum.

>I KNOW what I see on ARRL.org
<<

See above.

>and hear on RainReport. The focus is on the out of banders, the 10/12 meter bandits, not on what
happens on the regular 40.
<<

Another disagreement of interpretations. I don't agree with the way you see it all. As a matter of fact, you are dead wrong.
Count the violation notices. The focus is on hammies, Jer, not out of banders, not cbers. If it was on out of banders, they could sweep 555 and cook a boatload instead of a minnow fry now and then. The focus is, as always, on amateurs, as they present a much larger problem to the FCC than cbers.

>In fact,. WRT the regular 40 and the usual freebanders above 40 and below 28.000, I figure those guys are pretty safe for now--and I've so stated. But those that operate on the ham bands without license, we will see.....we will see.....
Have a happy, happy!
Jerry
<<

And as I have stated, I support you 100% in all your endeavors concerning illegal intruders on the hammie bands, but you claim you are hunting freebanders in another thread.
Anyways, I can almost sympathize, after all, you aren't getting much help from uncle Sam or anyone else.

"Had I not been replying to you, then I should not have replied to your postings?"
(Explain how that makes any damn sense as to what you just wrote.)

If the reply was towards YOU...your "screen name" would have been inserted in that posting.
It Was NOT!! That is the issue/point that YOU need to ACCEPT and Ignore that posting that does not have a thing to do with YOU.

You CHOSE to respond to a reply that was for someone else---NOT You!!
WHY do you CHOOSE to answer to Posts that are NOT directed at / to you?

So, Ignore further posts that DO NOT have your "screen name" in the messages and you will not get lectured like you are now!!
Now go get yourself together and collect your thoughts. You'll be Alright!
Don't Sweat it, guy.
Humans make mistakes. I make mistakes. I accepted it.
You..have not accepted it!
My aliases don't concern you.
Why are you so interested in my aliases
You can create your own.
I'm not bitching about your alias.
I create mine to prevent spam and other unwelcome messages.

So, There!!

NOW I am replying to YOU!

See the difference?
Since you responded to this post....I am responding to YOU, now!!

I stand by "The Constitution Of The United States of America/ 1st
Amendment"!

There's this button on your computer that says On/Off.....use it more often
when you don't like others posting on this newsgroup! You "Cry" Too Much
about little issues that affect you in some form.

I'll post any new posts that I feel!
You can do the same to!

Don't be so jealous of others!!

You must have issues about people with disorders!
You are violating my constitutional rights as a disabled American!!
But I won't argue with a steel wall!!! I just laugh at your weak attempts to
break me down, buddy boy!!

The more replies you post the more Lectures You will Get!!
So, Whatever, guy!!

Hey,got a few more for you,besides the "fact" that cbs down aircraft.
1) the earth is flat
2) the sun revolves around the earth
3) some guy named atlas holds the earth up on his shoulders
4) atlas is standing on a turtle
5)even though the fossile record proves that green house gasses were 400% higher than they are now,and that life flourished under those conditions.....some idots still claim that it means the "end of the world"

guess we are still living in the middle ages!

see yah in the funny papers, gunslinger :)

I'll throw in my $0.02 from the east coast. Here in Long Island, NY,
channels 36 through 40 are fairly active with SSB DX. Channel 38 LSB
has kinda become a calling frequency of sorts. Yeah, channel 19 still
belongs to the truckers travelling on the L.I.E. or route 495. We too
get many Central and South American stations who have their
directional antennas oriented so as to work the northerly stations.
Some who don't speak spanish might erroneously consider many spanish
QSO's QRM. Most are actually very professional sounding operators
engaging in some very well mannered QSO's. Occasionally we get
European stations as well, but the Carribean basin as well as the
Americas seem to have our number.

So to answer your question, there are plenty of folks on the CB. And
since it's but a microcosm of society as a whole, you'll find the full
spectrum of people there ranging from very nice to not so nice. Get
your rig checked out (Probably just needs a good alignment.) and
enjoy. :-)

Jim,

Please keep in mind that the amateur bands' only justification for existence
are that they are there to provide emergency communications services for this
country.

A CW transmitter is the easiest type of transmitter to construct, and the
simplest of receivers can detect it.
You may not have any sidetone, but you should be able to distinguish the dots
from the dashes. An excellent reason to keep at least a BASIC code requirement
for any license, and one I would support as a requirement to getting ANY radio
license, including a commercial one.

An FM transmitter is the next easiest to construct, but the receiver is much
more complicated and less likely to by successfully built from any available
parts.

An AM transmitter is the next easiest to construct and can be received by the
most basic of receivers. And any receiver capable of receiving CW ahould also
be able to receive AM.

An SSB transmitter is the hardest to construct and the SSB receiver is also
the hardest to construct, so it would be the least likely mode of operation to
be used in an emergency.

Due to the huge volume of CB radios that exist today, and the fact that many
of the older tube type radios are still being used on the band, the best chance
for successful communications after the bomb drops would be a CW transmission
made on CB channel 19, with the next most likely candidate being an
AM transmission on that same frequency.

Those are all parametrics that Riley H. needs to consider whenever he
considers any enforcement actions and/or any re-allocation of spectrum
resources between the licensed HAM operators and the unlicensed CB radio
operators.

If he considers emergency communications to be a priority, there should always be a CB band.

Where it will reside, and how much bandwidth it will be allocated, should be determined by what would be in the best interests of our National (homeland) defense, and not much else.

Just my opinion,

Dennis O.

It makes perfect sense... Why press the reply button ON MY POSTING, quoting MY POSTING, and then write a message to someone totally different? (See original message quote below) That is what does not "make any damn sense".

> If the reply was towards YOU...your "screen name" would have been inserted

Sounds good to me... You are arguing for no reason. All you have to do is
look at your original post, and open your eyes. It was a reply to me with
my posting quoted in it. So you were talking to someone else, who cares.
You still replied to my post with a bunch of crap that had nothing to do
with me or what I typed in the particular post you replied to. If only you
knew how to read correctly, you would realise your are the one on the
loosing side of the fence in this argument...

twistedhed@webtv.net (Twistedhed) wrote in message
news:<16378-3D584B57-395@storefull-2312.public.lawson.webtv.net>...
<snip BS>

No one ever said Riley's primary job focus was "CB Enforcement".

But Riley did say that Twistedhed's post was "10% accurate". That
means 90% of it was falsehood.

Uh oh. Time for the TWISTEDHED DEBATE GUIDE (originally written by
Dave Hall).

His typical M.O. for any "debate" (and I do use that term VERY
loosely) that he may choose to enter into. He is skilled at
obfuscation,
and changing meanings. Even when one clearly expresses the point,
twisty
will instead focus on the nuances, rather than the substance of a
point.

One of his biggest hangups during one of our earlier altercations, was
to continually attempt to steer the focus of the debate from illegal
CB
operations to USENET ettiquette. I assume he was attempting to make
the
point that "people in glass houses shouldn't throw rocks". In any case
his comparison was irrelevant to the debate, but he continued to make
an
issue out of it anyway.

One cannot make a comment regarding CB operation, without
twisty countering that "hammies are guilty of XYZ" as well. Two wrongs
still don't make a right, and neither does a counterpoint diminish the
truth of the original point.

Twisty has no real debate skills. He is incapable of staying on topic,
he seems to have trouble comprehending simple points and analogies,
while accusing the other party of exactly the same thing. His
"stradegy", if you could call it that, is to twist meanings, obfuscate
points, and then accuse others of "lieing", to put them on the
defensive, while never offering up any bits of factual information to
prove his side. He claims to speak for the majority of people, yet I
have never seen anyone jump to his defense during any of his
"debates".
He also has an over inflated ego, and cannot possibly comprehend how

so
many people can find fault with him. To counter that, he claims that each and every person on the other side is really just one person posting under numerous accounts. He probably thinks that you, me, Aaron,
Frank etc, are all the same person.

He then claims victory when the other side simply becomes frustrated or
loses interest in pursuing further exchanges. He is as predictable as PMS, you can almost tell exactly what posts he will respond to, and almost exactly what he will say in response. I've baited him a few times
just to prove my theory. He fell, hook, line and sinker.

He reminds me of that old Monty Python skit where the guy pays for an arguement, but gets only rote contradiction. Twisty will counter anything you say, but can never back up any of it with fact or even a good theory.

Which is why he is refered to as the newsgroup punch clown. He's good to
lash out at if you want to get something off of your chest, or just want
to do the intellectual equivilent of bitch slapping. String him along until you tire of him, and then let him babble to himself.
But he's not worth the effort to take seriously.

>

Jay and Skipp,

I have a trick that has worked quite well for me over the years.

It allows me to have as much as a 3 volt variation in bias voltages between different tubes and still get balanced quiescent plate currents from them. (Usually the variation in 'unmatched' tubes is less than a volt from the factory.)

I put a 10 ohm, 1 watt ,'flameproof', non-inductive resistor between each cathode and ground.

I bypass each resistor with a 330 ufd. @ 6 VDC (or higher voltage) miniature axial electrolytic capacitor, a .001 ufd. cap., a .01 ufd. cap, and a .1 ufd cap..

The small value caps are usually disc ceramic rated at 100 volts or more so their size will allow them to pass adequate RF current without much heating of the cap itself. Multiple bypass cap. values are used to eliminate any self resonance possibility.

The small caps are for RF bypass, and the large cap is only there to hold the self bias voltages relatively constant down to AM modulation frequencies as low as 300 HZ.

Any tube that conducts harder than the others with the same amount of external grid bias applied will develop more negative cathode self bias than the others, causing it to conduct less, and the currents between the tubes should automatically 'equalize' unless there was some prior grid damage that had been done to the tubes, in which case it should be replaced anyway.

The 10 ohm cathode resistor also limits the maximum average plate current through each tube to 316 ma. or less because at 316 ma. the resistor is dissipating it's rated 1 watt.
Using 'flameproof' film type resistors that can open circuit quickly with an overload has saved many a tube from overcurrent damage caused by improper output tuning and loading, and/or improper operation in general.

If your source has adequate drive to overcome some cathode circuit degeneration, you can leave the resistors completely unbypassed, (no 330 ufd. electrolytic and no ceramic bypass caps.), and get the same results.

Regards,

Dennis O.

Tim, you may have taken this wrong. Problem is he knew nothing about it. What channel did he hit? The emergency channel? I know this treading in the middle can collect flack from both sides, but methinks that Twist might have a good answer on all sides. Certain things one should avoid - setting up a broadcast station on FM is one - the broadcast industry has deep pockets. The FCC will react quite quickly for them. Police frequencies. Emergency / public safety comms will get you in trouble pronto. Marine radios are for marine use. There is a safety factor involved. As I've stated, I'm not a cop nor a wanna be cop. Just think a bit as to where you're transmitting. As far as speed, I did manage to catch an interesting ride one time in a Ford model A running 550 horsepower (around town, too). Just like taking off in a jet plane (but a lot more noise with no hood, no cab, no trunk, nothing but two seats and a 454 cubic inch engine screaming to be fed more!). That thing could do zero to 120 in 6 seconds (I did start hoping the brakes were equally capable). Can you believe the guy had it insured as an antique? Yeah, right - all chrome and gold anodized. As to pot, I spent a year in Vietnam. I won't lie like some and claim I never inhaled.

Why is that? You can't have a legitimate conversation without
your identity being displayed. Do you also believe that people
with unlisted phone numbers are also less worthy than listed
ones?

The worthiness in a post has nothing to do with whether you chose
to identify yourself. Rather it has to do with the content of the
post. Anonymity in itself is not sinister.

Yeah but some asswipe is using Xgannon remailer to send vulgarity to newsgroup users. Very inflamitory. I reported the abuse to Xgannon.

"Got RF?"

No but what would start at 100% credibility at the beginning if identified
starts at 0% anonymous. Depends to some extent on the Group, the subject,
and the post itself but the answer in general is: Yes, unidentified posts
have no reason to be read at all.

Part of it is a generational thing, part of it is a radio thing. N&#65533;BK is
as much my name in some contexts as Richard and I will display both with
pride; I am not afraid of anyone that might be offended and as a result I
have no particular use for what a priori is simpering cowardice.

Some are worse than others: xgannon is a public urinal and I block it on
sight as I do with some others.

Anonymity is not sinister, it is merely a drivel warning.

Dick N&#65533;BK

Nice try, but .... a receiver for ssb could receive CW. An am receiver ... well, I don't know how well I'd do without a tone. If the bomb drops, I don't know about you, but I'll likely tuck my head between my legs and kiss my a** goodbye! ;)

73 from Rochester, NY
Jim

ps - the answer as to communications is how many radios survive. Amateur towers are usually smaller than commercial towers and in a real nasty blow some are likely to survive. CB exists in (likely) the millions and many are likely to survive. Go figure. It might make sense to pool resources rather than spend time flaming each other (?). Constructing a set might be easy for a few of us, but will require components, solder, and a working soldering iron. My main concern just might be food and water.

I just installed a old Pride 100 bi-linear amplifier in the semi and i am very pleased with it.
The pills are made by Pride but near as i can tell they are similar to a mrf455.
The recieve amp works great and the unit is very clean sounding,
the rf power is cut back to provide a 1.75 watt dead-key giving the pills plenty of headroom.
Take Pride n your ride,if u can find one..........

Used to be (not sure if it is still this way) that the New Zealand CB
band was One MHz lower than the usual CB band. Occasionally one might
wander into the so-called "legal 40", but usually if you wanted to
talk to them you had to go one megahertz lower to do it. Wasn't
anything else there. So why not?

> Regards,
>
> Dennis O.
>

All true but at the risk of some amazing parasitic problems. There are reasons why tubes like the 6146 have multiple cathode pins, all the better to bolt the cathode firmly to chassis ground. Similarly the 3-500Z has four grid pins for the same reason. I have never seen an Eimac tube in commercial service run above ground. But then they do not generally run tubes in parallel either so it is a horse apiece.

All in all, for SSB usage I think I might prefer the unbypassed version to keep the bias nailed firmly somewhere rather than having it wander under use. Granted 10 ohms is never going to do much more than 4 volts and may help the linearity a tad or hurt it by not much given that the AB1 bias should be about -80 in any case. But 5% is five percent regulation which sort of defeats having bias regulated to begin with.

I kind of sense we are making mountains out of molehills.

These tubes have directly-heated cathodes. How can you operate the
cathode above DC ground?

Should learn after all these years to listen to little voices telling me
something is weird.

The First Amendment doesn't apply here. Never has and never will. Why do so many people hide behind the Constitution and the Bill of Rights? Why do so many people do so in error?

Kenneth:

I'll answer you in a top post, since this NG thingy appears rather new to you. Voob and JJ are on their own mission. George(Me), well, he has no real mission...such is the way with insanity. My mission is to live and let live...unless you happen to be an imbecile and make REALLY stupid post that make no sense whatsoever. Hell, I can even be helpful if the fancy strikes me. But be forewarned, and I think you might know this by now as I have made comments about some of your posts...I do have a low tolerance for stupidity.

The Confidential Frequency Guide might be a good place to check. It lists some freqs in the "freeband" that are in use by various agencies.

It might be a good idea for freebanders to stay away from 27870 USB. This is a USAF Scope Command ALE freq. And it is active.

Could be, possibly even maritime. I don't remember what the
allocation is for that freq.

If you go down to the upper end of 25 MHZ, you'll find feeders for
broadcast stations in FM.

The ITT AM-6154 is using those safety resistors, they use 3 ea.
The NVA KN-1E uses 5x 4CX250B in parallel and use cathode-resistors
for current equalization.
Why should this measure cause risk of parasitic?
The reason for multiple pins is current distribution, not using
only one small pin.

Peter

Richard McCollum wrote:

Tubes of the 4CX250 family are indirectly heated.
Even with drect heated tubes it would be no problem, as long as the
heater winding of the transformer is not grounded on one side, but
floating

Well they figure by adding the extra "W" it's ok to
forge your name, but it's not. Make sure that you
send a copy of this to Xganon from your WWW
account, pointing out that someone is using their
service to impersonate you.

I'll have to agree with Richard on this. When your
a Ham, you have earned the right to transmit on your assigned
bands. The freebands are in most part purchased and assigned
to certain agency's, not a ham operator how took a test to
talk on his frequency

Twistedhed,

It IS a fact that Riley's primary function is, as Legal Counsel for the
Enforcement Bureau, primarily
concerned with the protection and the cleaning up of the Amateur Bands.
Prior to his appointment,
it had become extremely difficult to find a place where there weren't
whistlers, playing music, extremely racist remarks, filthy language, and
every form of lawbreaker imaginable (sound familiar?). For years ARRL and
individual hams had been begging FCC to come back to enforce-
ment. It was this urging, finally heard loudly and clearly, that brought
Mr. Hollingsworth to the fore-
front. There will always be a few who will test the limits, Amateur and
CBer, just to see what they
can get away with, but I no longer hear the extremes I was hearing 3 years
ago. Even then, these
clucks were in the minority. Taken on the whole, if a "survey" could be
taken (which is impossible)
on the relative numbers of CBers and hams that break the rules governing the
respective services,
those on CB would "win" in terms of numbers of people who "stretch" the
rules. Given, hams have more leeway on amps and frequencies, but, again,
the relative numbers of lawbreakers on the ham
bands would pale in comparison to those of the CB service.

I can also show you where I stated in various threads and newsgroups that
CBers using illegal equipment are relatively safe while using it on the
regular 40 channels. Who's going to measure or
worry about a 40 watt radio being run cleanly on channel 19? BUT! When
those same people run
those radios behind linears and/or on the 10 meter band, that in itself
brings immediate attention to
their operations and animosity from those who are licensed for that band.
Since I can name a couple of CBers who've been hit with fines for amps

fairly recently (they were running in the regular
40), I can't say what *other* people (Mr. Solomon?) have in mind WRT CB enforcement. I DO
know, in spite of your protests to the contrary, that enforcement HAS increased WRT to truckers
and even to CBers on the 40 CH; all you gotta do is spend a bit of time on the FCC and ARRL
site to see it.

Finally, another thing that hasn't been mentioned is that there are initiatives thru other avenues
to combat the outlaw operators. ARRL, for example, (I'm told) is working thru their Congressional
laison (sic) on several bills favorable to Amateur Radio; again, there are 'bugs" being put in con-gressional ears about the sales and use of those illegal radios. I know that individual hams are writing their Representatives (including me) asking for help in this matter. Such actions could include the following: (bear in mind that these are just ideas being promoted, not actual pending
actions)

1) Amend the Local Enforcement Law to allow for DOT officers to inspect for illegal radios at
state weigh stations (truckers). Yup, you'd get a howl of protest from the truckers!

2) Increase funding, if only temporarily, to FCC to permit the aggressive abatement of illegal oper-
ation on the Amateur bands--especially the intruders; RH already goes after the unruly "ham-
mies".

3) Bring back, or even create, a CB enforcement task force similar to that of Amateur Radio
headed up by a "Special Counsel" similar to the position held by Hollingsworth.

4) Perhaps the "sunsetting" of 27 MHZ CB in 5-8 years. Some are arguing that CB on 27 MHZ
has outlived its usefulness because, a) it can't expand where it is, b) technology has outstripped
CB where it is, c) because of the restrictions on it, said technologies can't be applied to it, d)
encouraging the use of MURS and FRS in its place would greatly abate the interference to ad-
jacent services as well as to its own users. This is the least politically "easy" alternative.

There are ways to get FCC to aggressively enforce its own rules. That is thru Congress itself. It is
how the Local Enforcement thing got done, although, typical of Congress, they did it "bass ackwards". With the right guidance (ARRL), they could be

persuaded to enable their own agency
whose job it is to start with to make the Amateur bands free from rampant
interference.

73

Jerry

Source record: 132787

Adam and Eve said, "Lord, when we were in the garden, you walked with us every day. Now we do not see you any more. We are lonesome here, and it is difficult for us to remember how much you love us."

And God said, "No problem! I will create a companion for you that will be with you forever and who will be a reflection of my love for you, so that you will love me even when you cannot see me. Regardless of how selfish or childish or unlovable you may be, this new companion will accept you as you are and will love you as I do, in spite of yourselves."

And God created a new animal to be a companion for Adam and Eve. And it was a good animal. And God was pleased. And the new animal was pleased to be with Adam and Eve and he wagged his tail.

And Adam said, "Lord, I have already named all the animals in the Kingdom and I cannot think of a name for this new animal."

And God said, "No problem. Because I have created this new animal to be a reflection of my love for you, his name will be a reflection of my own name, and you will call him DOG."

And Dog lived with Adam and Eve and was a companion to them and loved them. And they were comforted. And God was pleased. And Dog was content and wagged his tail.

After a while, it came to pass that an angel came to the Lord and said, "Lord, Adam and Eve have become filled with pride. They strut and preen like peacocks and they believe they are worthy of adoration. Dog has indeed taught them that they are loved, but perhaps too well."

And God said, "No problem! I will create for them a companion who will be with them forever and who will see them as they are. The companion will remind them of their limitations, so they will know that they are not always worthy of adoration."

And God created CAT to be a companion to Adam and Eve.

And Cat would not obey them. And when Adam and Eve gazed into Cat's eyes, they were reminded that they were not the supreme beings.

And Adam and Eve learned humility. And they were greatly improved.

And God was pleased.

And Dog was happy.

And Cat didn't give a shit one way or the other.

ILLEGAL CB TRANSCEIVER LIST

The FCC's Office of Engineer and Technology (OET) has evaluated the devices listed below and has concluded that these devices are not only amateur transceivers but can easily be altered for use as Citizens Band (CB) transceivers as well. As such, OET has further concluded that these devices cannot legally be imported or marketed within the United States for the reasons discussed below. Further, the FCC General Council has issued a decision in a specific case involving one manufacturer and has concluded that dual use CB and amateur radios of the kind at issue may not be approved under the Commission's rules and are in violation of several rules including the RF power level limits of 47 CFR 95.639. (letter from Christopher J. Wright, FCC-OGC to John F. Atwood, US Customs Service, dated May 17, 1999).

Transceivers used in the Amateur Radio Service below 30 MHz do not require FCC authorization prior to being imported into or marketed within the United States, but transceivers for other services, including the CB Radio Service (CB), do require Commission approval. The transceivers listed herein and other similar models operate in the amateur "10-meter band" and are often referred to as "10-meter" radios or "export" radios. The amateur 10-meter band uses frequencies that are very close to the channels set aside for use in the CB service. Some of the transceivers that manufacturers call "10-meter" radios either operate on CB frequencies as manufactured and imported or are designed such that internal circuits can readily be activated by a user, a service technician or a dealer to operate on CB frequencies. According to Section 95.603(c) of the Commission's rules, a CB transmitter is a transmitter that operates or is intended to operate at a station authorized for the CB service. 47C.F.R. § 95.603(c). The Commission's equipment authorization experts in the FCC Laboratory have determined that the transceivers listed herein and other similar models at issue here are intended for use on the CB frequencies as well as those in the amateur service because they have built-in capability to operate on CB frequencies. This capability can be readily activated by moving or removing a jumper plug, cutting or splicing a wire, plugging in a connector, or other simple means. Thus, all the transceivers listed herein and similar models fall within the definition of a CB transmitter. See 47C.F.R. § 95.603(c). A CB transmitter must be certificated by the FCC prior to marketing or importation. 47 C.F.R. §§ 95.603(c); 2.803.

Moreover, the dual use CB and amateur radios of the kind at issue here may not be certified under the Commission's rules. Section 95.655(a) states: "..([CB] Transmitters with frequency capability for the Amateur Radio Services . will not be certificated.)" See also Amendment of Part 95, Subpart E, Technical Regulations in the Personal Radio Services Rules, FCC 88-256, 1888 WL 488084 (August 17, 1988). This clarification was added to explicitly foreclose the possibility of certification of dual use CB and amateur radios, see id, and

thereby deter use by CB operators of frequencies allocated for amateur radio use.

In addition, the Commission's equipment authorization experts have determined that these devices violate or appear to violate a number of the rules governing CB devices. For example, they may use emission types not permitted, or emit RF power at a level in excess of the levels permitted in the CB radio service. See 47 C.F.R. § 95.639.

In view of the foregoing, the following "10-meter" transceivers are not acceptable for importation or marketing into/within the United States. Importation and marketing of these units is illegal pursuant to Section 302(b) of the Communications Act and Section 2.803 of the rules. Willful violations of the Rules and the Act may subject the violator to a monetary forfeiture of not more than $11,000 for each violation or each day of a continuing violation. The Commission continues to review this type of equipment, and additional makes and models may be added to this list in the future.

LIST OF TRANSCEIVERS
ILLEGAL TO IMPORT OR MARKET

GALAXY - models: DX33HML, DX 44V, DX55V, DX66V, DX 73V, DX 77HML, DX 88HL, DX99V and Saturn Turbo

CONNEX - models: 3300, 3300HP-ZX, 3300 PLUS and CX-3800

MIRAGE - models: 44, Galaxy 88, 9900 and 2950EX

NORTH STAR - models: NS-3000 and NS-9000

PRESIDENT - models: Grant, J.F.K., Jackson and Lincoln

PRO STAR - model: 240

RANGER - models: AR-3500 and RCI-2950

TEK - model: HR-3950

UNIDEN - models: HR-2510 and HR-2600

SUPER STAR - model: 121

For further information concerning the listed transceivers or similar models, contact Ray LaForge or Gary Hendrickson at the FCC Laboratory, 7435 Oakland Mills Road, Columbia, MD 21046, (301) 362-3041 or (301) 362-3043 respectively, or E-mail: rlaforge@fcc.gov and ghendric@fcc.gov

I would still would have to say Aaron is correct WRT those radios on the
list.

But, they are NOT on the list for reasons that should be obvious. It is
those single band radios
that are quite obviously being imported for other than Amateur use. The law
is designed to, and
targeted towards, the hindering of illegal operations on both CB and ham

Simple. Those multi-band HF radios are not on the list. Those "bad" radios
are the target of the rule, not radios approved for sale to Amateurs in the
USA,
nor CB radios that meet the criteria of Part 95.
>
> Probably the most commonly used CAP frequency is 26.620 MHz, only 75
> kHz below channel 1.

That's only one of them. And N O N E of those so-called "10 meter" radios
is
legal for use on THOSE frequencies, either. CAP equipment must meet NTIA
criteria for
frequency stability, and many of the ham HF radios with high stability
options offered by the
mfrs do meet said criteria.

If the rig is putting out 'harmonics', it wouldn't matter whether you
were out-of-band or on the "legal 40"; it would still put out
harmonics. Your point?

I'm not frustrated, but Aanal Aaron must be. He keeps getting shot down on his "crusade" against so-called illegal 10-meter radios! Must be tough being a moron, don't ya think?

I think you misunderstood Packrat.
I don't believe that he meant one person using both sidebands at once...
while
he uses USB on 27.405, another group of people could be using LSB on that
frequency.
That way you get 80 conversations or groups on the 40 channels.

Regards,

Peter.

==

Here in the UK, we use AM for picture and FM for sound.
The colour system is PAL, I am sure you will tell us where that system
originated :~)

Our stereo radio system is intersting, with quite a mix...
The mono (left + right) signal is put on the carrier using FM, the
difference
(left - right) is then put through a balanced modulator giving a DSB signal
which is then frequency modulated onto the carrier.

Regards,

Peter.

Enough already. All the other copies of this are still on the servers.
To keep posting it just puts multiple copies on the servers, wasting
bandwidth, p*ss*ng people off and getting you killfiled.

It would be far better to post it once then wait a month before re-posting
it. That way would be replacing it as it disappears off some servers.

Regards,

Peter.

Hi Jerry, be aware of the intentional confusion being generated by certain individuals who point out the fact that a ham *could, under certain circumstances* legally transmit in accordance with Part 97 using one of these illegal "10 meter CB" radios.

-Aaron-

3769. Re: Personal Call with the man

Newsgroup: rec.radio.cb
Date: 2002-08-14 20:43:56 UTC
From: twistedhed@webtv.net
Message-ID: <20791-3D5AC10C-37@storefull-2314.public.lawson.webtv.net>
Source record: 132799

JerryO wroe:
>Twistedhed,
It IS a fact that Riley's primary function is, as Legal Counsel for the Enforcement Bureau, primarily
concerned with the protection and the cleaning up of the Amateur Bands. Prior to his appointment,
it had become extremely difficult to find a place where there weren't whistlers, playing music, extremely racist remarks, filthy language, and every form of lawbreaker imaginable (sound familiar?). For years ARRL and individual hams had been begging FCC to come back to enforce- ment. It was this urging, finally heard loudly and clearly, that brought Mr. Hollingsworth to the fore-
front. There will always be a few who will test the limits, Amateur and CBer, just to see what they
can get away with, but I no longer hear the extremes I was hearing 3 years ago. <<

No disagreement with any of that as I don't really concern myself with amateur radio that much. I can sit here and "war story" as some prefer the olden days but I don't see the relation to cb.
Nevertheless, I am happy for you that enforcement is taking place where it should and that your bands are being cleaned up of all the problems you say existed there.

>Even then, these
clucks were in the minority. Taken on the whole, if a "survey" could be taken (which is impossible)
on the relative numbers of CBers and hams that break the rules governing the respective services,
those on CB would "win" in terms of numbers of people who "stretch" the rules.<

An opinion based on personal observations is always refreshing, as long as the speaker recognizes it as such.

> Given, hams have more leeway on amps and frequencies, but, again, the relative numbers of lawbreakers on the ham bands would pale in
comparison to those of the CB service. <<

You are speaking of stretching the rules... even giving you the benefit of the doubt with this particular subject, which I wouldn't wager on if I were a gambling man, the hammies apparently are presenting a much greater danger, if that word should be used at all, to WHATEVER mayhem you are trying to pin on cbers and absolve hammies of...long before cbers enter the picture,,,otherwise we would have a special liason to the FCC for cb enforcement. Ain't gonna happen, wouldn't be

prudent...priorities I tell ya'!

>I can also show you where I stated in various threads and newsgroups that CBers using illegal equipment are relatively safe while using it on the regular 40 channels.
<<

I've seen them.

>Who's going to measure or worry about a 40 watt radio being run cleanly on channel 19?<<

A licensed hammie who still enjoys the hell outta cb.
Your valiant efforts vanish when it comes to one of your own. When you speak of illegal equipment being used reasonably and responsibly (save the "oxymoron" call, Frank) and some non-enlightened no-code, or worse advanced hammie comes along and cries crocodile tears saying it can't be done or isn't right, you remain silent. It would appear to me that another hammie should know better, unlike the lowly and ignorant cber, and that when such behavior is exhibited and recognized by another hammie concerned with such things as pride and legality through knowledge, would assist the no/code or non-knowing hammie in his ignorant bliss.

> BUT! When those same people run
those radios behind linears and/or on the 10 meter band, that in itself brings immediate attention to
their operations and animosity from those who are licensed for that band. <<

Misdirected anger.
It ain't the cb regs here you seek or we wouldn't be still doing our thing with all this strict enforcement..

>Since I can name a couple of CBers who've been hit with fines for amps fairly recently (they were running in the regular 40), I can't say what *other* people (Mr. Solomon?) have in mind WRT CB enforcement. <<

And we can go back and forth and tit for tat, with ten or twenty to one, maybe even more, of enforcement actions against hammies.

>I DO
know, in spite of your protests to the contrary, that enforcement HAS increased WRT to truckers
and even to CBers on the 40 CH; all you gotta do is spend a bit of time on the FCC and ARRL
site to see it. <<

I never said it was nonexistent, Jerry, but it damn near ain't escalated and I still say if you run a reasonably clean station, don't be a jerk, stay out of the hammie bands and know what you're doing, you're pretty safe. Do some feel it worth the chance? Apparently millions (no facts, just a guess, but at the least..THOUSANDS) do on a daily basis, and you

must admit, it is to the extreme chagrin of certain hammies. Some are so pissed off at themseles for getting licenses 'cause they didn't research what it was before doing it and were extremely unhappy with the state of affairs and results they found among the hammie "brotherhood" (read: cliques) that they have nowhere to vent their anger excet at us that do successfully, what they only dream of..See, take the basic nocode for example. They can't enjoy the type DX we do the way we do it and they can't do it on cb or the freeband 'cause they have a license now and (gasp) their voice may be recognized and they may be turned in by one those self-appointed police patrols of the hammie bands that made them so damn jaded in the first place. See, it's so circular, but for some reasons, some of you hammies, such as yourself, fail, or are unable to separate hammie radio from cb in this forum. Check the archives and see who continually feels the need for attention, merit for their service, brings up hammmie radio, compares it, etc., etc.,....hammies.
It ain't cbers bringing up hammie radio in here and the cbers that are here aren't responsible for your hammie band intrusions, otherwise Hollingsworth's mighty sword would have slayed some dragons instead of lizards.

>Finally, another thing that hasn't been mentioned is that there are initiatives thru other avenues
to combat the outlaw operators. ARRL, for example, (I'm told) is working thru their Congressional
laison (sic) on several bills favorable to Amateur Radio; again, there are 'bugs" being put in con-gressional ears about the sales and use of those illegal radios. I know that individual hams are writing their Representatives (including me) asking for help in this matter.
<<

If you ain't been invited to a fundraiser dinner your scribe went in the trash and you received a token reply with a stamped sig. to put with your patches IF you were lucky.
In other words, unless you are a major player (contributor) your letter don't mean squat. It's not a democracy anymore Jer, they don't do things that way anymore. It's a money thing and it's not getting younger, we're getting older.

> Such actions could include the following: (bear in mind that these are just ideas being promoted, not actual pending
actions)
1) Amend the Local Enforcement Law to allow for DOT officers to inspect for illegal radios at
          state weigh stations (truckers). Yup,
you'd get a howl of protest from
the truckers!
<<

Not just the truckers. Where are the indiviual states gonna get the funds to open all the weigh stations they can't even afford to eep open now? Hell, it was only a few months ago that Arkansas shut down the

entire government becasue they were so damn broke. ARRL gonna hold a cookie sale? There is no "new" money, so in order for this to take place, the money must be taken from another group that it was earmarked for. Now THEY are gonna howl and you now have to convince the contingency your reasons for checking big trucks for illegal radios outweigh the new proposed public health center Senator Scumbag promised for his sister's illigitimate son's lover that is deathly ill with no health insurance in their hometown.

>2) Increase funding, if only temporarily, to FCC to permit the aggressive abatement of illegal oper-
ation on the Amateur bands--especially the intruders; RH already goes after the unruly "ham-
mies". <<

Again, there is no "new" money without raising taxes. Your only solution is to take it from another earmarked faction or fundraise or donations.

>3) Bring back, or even create, a CB enforcement task force similar to that of Amateur Radio
headed up by a "Special Counsel" similar to the position held by Hollingsworth. <<

$$$$
And dont forget..... the hammies that feel cb is a detriment to THEIR hobby are in the mionority..even among hammies.
Now put that scale against the rest of the world and no one gives a damn about cb, except a few hammies with too much time on their hands and those, such as yourself, that have good reason to act vigilant WHEN it affects you.

>4) Perhaps the "sunsetting" of 27 MHZ CB in 5-8 years. Some are arguing that CB on 27 MHZ
has outlived its usefulness because, a) it can't expand where it is, b) technology has outstripped
CB where it is, c) because of the restrictions on it, said technologies can't be applied to it, d)
encouraging the use of MURS and FRS in its place would greatly abate the interference to ad-
jacent services as well as to its own users. <<

Funny. It really has outlived it's usefulness, but so has hammie radio. today's technology really does make them oth hobby services nothing more...yea I know all about the"powers gone, all we have left are hammies" scenarios. These are exceptions. not rules.
Same could be said for react.

>This is the least politically "easy" alternative.
There are ways to get FCC to aggressively enforce its own rules. That is thru Congress itself. <<

Bingo!

>It is
how the Local Enforcement thing got done, although, typical of Congress,
they did it "bass ackwards". With the right guidance (ARRL), they could
be persuaded to enable their own agency
whose job it is to start with to make the Amateur bands free from
rampant interference.
73
Jerry<<

Free from interference would be nice, but I'd prefer they (the feds)
concentrate on the dirty criminal ways of the phone companies rather
than piss with radio hobbyists. After all, it's your dime, and mine,
that the phone, cable and radio companies are stealing and getting away
with.

While it is theoretically possible to do that given that most SSB filters will start chopping at about 300 Hz so the two sidebands are 0.6 kHz apart, I am not sure that having a second signal that close will not have some really bad effects on the usual run of CB SSB receivers. Seems to me to make more sense to simply slide up 5kHz. And suppressed does not mean eliminated.

Even the military does not have that much courage.

Anyone old enough to have seen the horizontal sweep tubes unsolder themselves from the pin would agree about current distribution. One of the reasons octal sockets disappeared.

Perhaps this too is a generational thing but operating a beam tetrode above chassis ground both DC and RF is asking for instability, not so much in AB1 but where grid current is drawn, been there, done that. And the books of the period advised against it so I did pretty well what I was told and lived to regret it when I did not.

I will assume that the units you mention are broadcast. I will take your word for it but paralleling tubes was not the usual practice in this part of the planet. Were I to do so I would probably try to keep the failures from being cascading and catastrophic and go this route as well but I might have not slept well at nite. Certainly the safety resistors are useful when it does take off for the trees.

Most of the Eimac tubes I dealt with were not all that skittish and were easy to tame. I still would not do it.

He said "part of your signal will land right in the middle of a TV
station." To me that is his point need a clearer explanation?
If you are on the regular 40 it wouldn't fall smack dab in the middle of a
TV station was the point being made.
```

For channel 2:
The frequency of the video carrier is 1.25 MHz above the lower edge, so for channel 2 the video is at 55.25 MHz.

The color carrier is approx. 3.58 MHz above the _video_ carrier (N.B. not the lower edge), so for ch 2 it is 58.83 MHz.

The audio carrier is 4.5 MHz above the _video_ carrier, so for ch 2 it is 59.75 MHz.

A post from the shortwave group I found informative.

*****
No amount of tuning accuracy will fix that problem, because carrier
re-instertion frequency isn't the problem. With SSB, there is no
information avaliable to correctly establish the phase relationship

between the carrier and the sidebands. This is the reason a Synch detector is attractive. It locks onto what is left of the carrier, so the phase relationship is preserved.

Some level of phase distortion is inherent in SSB reception. There just isn't any way to avoid it.

There are SSB schemes to avoid the problem. The Phone company used to use to do it , which is to put different conversations on upper and lower sidebands, and generate them with two carriers at the same frequency, but at quardarture. It then becomes possible to determine the phase relationship because effectively you have two signals at quadrature, so the time average product of the two when the carrier is reinserted at the correct phase is ZERO. The integral of sin(theta) x cos(theta) is always ZERO.

Right Richard,

What I remember most with my homebrew sweeptube linears (PL519)
are the flying anodecaps...

With 3-500Z a common fault is desoldering of the heaters.

With cathode resistors I do not see the point for instability, it is
also some negative feedback which in fact lowers gain.
On multiple parallel tubes this safety resistors is also fine for
measuring cathode-current of the individuals.

The amplifiers I mentioned in my last mail were commercial.
The ITT one for UHF/VHF and the NVA for the Army in GDR.
There was also a swedish made 4-holer in use for the marine.
Checked also the manual I have from a Telefunken amplifier
with 3x 4CX5000A for point to point HF communications, they also
have small resistors from the heater/katode to ground for
measurement-purpose

Peter

> The audio carrier is 4.5 MHz above the _video_ carrier, so for ch 2 it is
> 59.75 MHz.

Thanks Randy your post just proves the point. 55.25 Mhz /2 = 27.625 smack in the middle of freeband.
109.25 Mhz /4 = 27.3125 Mhz 83.25 / 3 = 27.750 Mhz

Chan Mhz Mhz Mhz Band

CATV 2 02 55.25 55.25 54.00 LO
AIR 6 83.25 VHF-LO
CATV A-2 98 109.25 108.00 109.25 MID

In the US, a TV channel is a 6 MHz wide chunk of bandspace. The bottom edge of the over-the-air channel 2 is 54 MHz and the upper edge is 60 MHz. Within this 6 MHz space is a video carrier, a color carrier, and an audio carrier.CATV has channels with frequencies below channel 2.

It's just info George, nothing more or less. The only real problem I see with the thread concerns amplifiers. One that amplifies at 27 MHz most likely wont do squat at 55.

UNAUTHORIZED EQUIPMENT SOLD ON INTERNET AND IN PUBLICATIONS

The Federal Communications Commission receives hundreds of complaints about alleged illegal (non-FCC certified) equipment being offered for sale on the Internet or in publications. The Commission is monitoring this situation carefully and requests your assistance. If you have any information about illegal or uncertified equipment being offered for sale, please forward it to the FCC. Useful information for the FCC includes:

* An original advertisement or Web address where the illegal equipment is being advertised or offered for sale with the types of equipment about which the allegations are being made, highlighted.

* If it is a Web-auction we will need the name of the auction site, the exact item number, and auction opening and closing dates.

* Name and address of the individual or business offering the item(s) for sale.

* Complainant's name and telephone number in the event follow-up is necessary. This information can remain confidential, if requested.

* Specifically, why you think the equipment is not in compliance with FCC rules.

* Number of pieces or types of equipment about which the allegations are being made (one piece, five pieces, how many models, etc.).

Information can be mailed to the FCC at the address below or e-mailed to fccinfo@fcc.gov.

> this 6 MHz space is a video carrier, a color carrier, and an audio
> carrier.CATV has channels with frequencies below channel 2.

And 146.76 will land you right in the middle of CATV 18. I've heard many
hams come down to CB and complain that their neighbor is bitching about
their voice coming through ESPN.

It most certainly will! There is no such thing as a perfect linear amp and a goodly number are non-linear by design, accident, or stupidity.

Back when dinosaurs roamed the earth, a Frenchman named Fourier (foy-ea) proved that every waveform could be expressed as a series composed of a sine curve and its harmonics in varying proportions. The backside of this is that any distortion of a sine wave in an amp WILL generate harmonics, get used to it.

These can be suppressed by a number of techniques. The pi-section beloved of amp builders is a low pass filter, it tends to whack freqs above its tuned freq. In days of old, an air transformer (usually a link in mid-tank coil) was the usual approach and were often tuned. Where broadband transformers are used, the usual approach is a trap set which is generally non-existent in CB amps and are clipped out of the exciter to get more meter power. Lots of other approaches to suppress the inevitable.

This is incidentally why the Marine and Ham bands were set up in harmonic relationships; kept the crap at home. This has been modified over the years.

It is not necessary for the harmonic of the carrier to be on a TV freq. The AM sidebands go out to a good part of the channel and in fact the lower sideband is sawed off to fit. And even by being near, it will end up in the TV receiver passband with unpredictable results.

I imagine that simultaneous conversations are possible between USB and LSB centered on the same channel.

The problem being that there will be interference between the stronger stations due to phase noises and spectral width of each station.

I believe there are now digital filters that could remove such artifacts as long as they are really outside each "channel". If the phase noise and voice spectrum greatly occupy the next "channel" then no amount of filtering will eliminate it. There is a however to this. If you're willing to sacrifice some fidelity in the process then you can narrow or shift one side of the filters' response and regain communication.

3789. Re: UNAUTHORIZED EQUIPMENT SOLD ON INTERNET AND IN PUBLICATIONS

Newsgroup: rec.radio.cb
Date: 2002-08-15 00:25:09 UTC
From: CIPA <Fecal>
Message-ID: <ullshm9h93uf07@corp.supernews.com>
Source record: 132818

Here's another FACTOID - Maybe 'SOMEONE' can pick up on this cause also.

The Children's Internet Protection Act (CIPA) is a federal law enacted by Congress in December 2000 to address concerns about access in schools and libraries to the Internet and other information. In early 2001, Federal Communications Commission (FCC) issued rules to ensure that CIPA is carried out.

What CIPA Requires

1.. Under CIPA, schools and libraries do not receive the discounts offered by the "E-Rate" program (telephone discounts that make access to the Internet affordable to schools and libraries) unless they certify that they have certain Internet safety measures in place. These include: measures to block or filter pictures that (a) are obscene, (b) contain child pornography, or (c) when computers with Internet access are used by minors, harmful to minors.

2.. CIPA requires schools to adopt a policy to monitor online activities of minors; and

3.. CIPA requires schools and libraries to adopt a policy addressing: (a) access by minors to inappropriate matter on the Internet and World Wide Web; (b) the safety and security of minors when using electronic mail, chat rooms, and other forms of direct electronic communications; (c) unauthorized access, including so-called "hacking," and other unlawful activities by minors online; (d) unauthorized disclosure, use, and dissemination of personal information regarding minors; and (e) restricting minors' access to materials harmful to them. CIPA does not require the tracking of Internet use by minors or adults.

For the school year July 2001 through June 2002, schools and libraries must certify that they have their safety policies and technology in place, or that they are taking the necessary actions to put them in place before receiving E-rate funding for the next school year. After that, participating schools and libraries must have filtering in place.

For further information on CIPA or to apply for Universal Service, contact the Universal Service Administrative Company (USAC) Schools and Libraries Division (SLD) at www.sl.universalservice.org. SLD also operates a client service bureau to answer questions at 1-888-203-8100.

OK Dick. I was not talking about generating harmonics, I was talking about amplifying them. Two different animals.

I haven't seen a customs agent use these frequencies in this country yet.
They don't have any equipment in their vehicles or bases for these freqs.
Must be a very old legacy allotment thing that has fallen by the wayside.

The FEMA freqs may or may not be in use. If they are in use its only because
their radios are programmed with these in a suitable channel search which
uses everything they were ever allotted at HF.

I've heard what I believe is a mix or a harmonic thing from an STL on the
27.430-27.530 freqs.but I don't believe they're using the freq. on purpose.

Which is what I tried to convince Aanal Aaron of. Those existing
already are legal to use, sell and buy. IF you're licensed for their
use on ten meters. It has ALWAYS been "illegal" to modify them for use
on CB. That's OLD NEWS. So what?

> after the unruly "ham-
> mies".

Sorry, Hollingsworth has already stated that the FCC has spent their
allotment for the next year. There is no justifiable reason to
increase their waste of money.

> 3) Bring back, or even create, a CB enforcement task force similar to that
> of Amateur Radio
> headed up by a "Special Counsel" similar to the position held by
> Hollingsworth.

He's been pretty ineffective so far; one or two BIG PR busts, and
that's it. What would change? Or do YOU want the job?

> 4) Perhaps the "sunsetting" of 27 MHZ CB in 5-8 years. Some are arguing
> that CB on 27 MHZ
> has outlived its usefulness because, a) it can't expand where it is,

But it can! Nobody is using the allocations above and below CB;
re-allocate those frequencies to CB.

b)
> technology has outstripped
> CB where it is, c) because of the restrictions on it, said technologies
> can't be applied to it,

So change the law; allow FM and packet. That's so easy it's almost
stupid!

d)
> encouraging the use of MURS and FRS in its place would greatly abate
> the interference to ad-
> jacent services as well as to its own users. This is the least
> politically "easy" alternative.

NEVER HAPPEN. How do you take away 30 million radios?

> There are ways to get FCC to aggressively enforce its own rules. That is
> thru Congress itself. It is
> how the Local Enforcement thing got done, although, typical of Congress,
> they did it "bass ackwards". With the right guidance (ARRL),

Oh yeah; the ARRL epresents less than 1/4th of all licensed amateurs
and they can't even keep the ham bands clean. THEY'RE gonna clean up
CB? You gotta be kidding!!!

they could be
> persuaded to enable their own agency
> whose job it is to start with to make the Amateur bands free from rampant
> interference.

Hasn't happened yet; what makes you think it ever will? They don't
even "police" the ham bands, with all the music being played and all
that. How about cleaning up your own bands before you worry about
something as innoculous as CB?

You're quick to jump in when someone makes a claim. But you haven't
the foggiest idea of what ir Right and what is Wrong. Check your
thread about those so-called "illegal" 10-meter radios. When others
weighed in on my side you cut and ran like the chicken side-stepper
you are. TROLL!

Please show an FCC or Part 95 cite stating that radios on the FCC's
BANNED LIST existing in a distributors warehouse are legal to sell and
buy if you're
licensed for ten meters.

Wrong Aaron, any ham can legally transmit on
the ten meter band with those radios, it's you trying
to confuse people.

That is essentially what I said above: under certain circumstances a ham could legally transmit using them in accordance with Part 97. Some individuals take this as an indication that hams may for example, buy radios on the FCC's BANNED LIST from Copper or Pacetronics just by flashing their license. Don't forget that the radios on the FCC's BANNED LIST are still illegal to advertise, distribute, and purchase.

*****, here is my response to both of your posts with a few more thoughts tacked on at the end.

Reply to your first post:

>>> I Stand Beside!! <<<
I'm Glad you don't hide behind it. Bravo for you.

>>> What in the hell is your BEEF!!! <<<
I have no beef. I suppose I should have been more tactful in my statement.

>>> IT APPLIES ANYWHERE I AM!! <<<
Unfortunately it does not apply everywhere you go, in the real world or digitally. I wonder what life would be like if it did?

>>> GET OVER IT <<<
Get over what?

>>> , Commie Bastard!!!! <<<
I do not nor have I ever supported communism. I firmly believe that the United States chosen form of government (Democratic Republic) when run well is a very good form of government.

Reply to your second post:

>>> Everyone HAS the RIGHT to FREE SPEECH!!! <<<
I agree. Unfortunately the governments of many other countries do not agree with us. It is very sad that in some countries the government has chosen to censor what people may say. It must be horrible to have to look over your shoulder before talking about a subject the government considers taboo or a no-no.

>>> What's gonna happen should this newsgroup get shut down? <<<
I guess if the news group is shut down I'll have to move on.

>>> You all gonna crying because someone violated your rights as an American!! <<<
No, if the news group is shut down then NONE of the rights granted to me as a citizen of the United States of America will have been violated by that simple act.

>>> I stand in front, behind and beside my Constitutional Rights!! <<<
Again, I am glad you believe in the Constitution and love our country. Kudos to you!

>>> You must be one of those commie militias starting a front!! <<<
No I am not.

>>> Your groups make me barf on each and every one of you!! <<<
I don't particularly like extremist groups, but while in the United States of America they have the right to say and do as they wish as long as they violate no laws. In fact I would stand up fight and die to protect their rights as Americans even though I whole heartedly disagree with their views. A very wise man once said "Freedom of speech is not protection for the speech you love but protection for the speech you hate" I will not even try to explain what he meant. I am sure you can figure it out for your self. I just wish I could remember who said this so that I might give him his due credit.

>>> Leave this country and take your communist attitude ELSEWHERE!! <<<
I will never leave this country. Maybe for work or vacation but I love our country and will stand with her until the day I die. Even with all her faults she is still beautiful to me.

>>> AMERICA RULES!!! <<<
Very true.

>>> Your kind drools.....like a baby!!! <<<
Hmmm, I have no response to that.

The cold hard facts:

This news group is not protected by the first amendment. All of the things in the physical word that make up this new group are privately owned, and as such can censor anything they wish. You have the freedom of speech in America, but this is tendered by the right of a property owner to control what is said and done on his property. This applies to message board, new groups ect. If you go into a gay bar and spout off about the evils of homosexuality they can have you removed and this is not a violation of your rights. If you join a HAM group and continually spew views that they disagree with they have the right to kick you out and this is not a violation of your rights. A news paper has every right to censor that which it prints. Just because your write a letter to the ED doesn't mean they wont edit it or refuse to print it.

Dave

There are no "certain circumstances" about it. As long as a ham has a
valid license for HF, they can use a 10 meter radio to operate there.
They can also use modified CB's. They can also use a bunch of scrap
electronic parts wired together to make a transmitter.

You seem to be confused about this. There is no type-acceptance
requirement for amateur radio gear. These kind of radio transceivers
are not illegal. They are only illegal to use to transmit outside the
ham bands.

Here are two certain circumstances. FCC Part 97 must be abided by. FCC Part 95 must also be abided by. That means a ham cannot legally use that radio to transmit both on 10 meters and also on CB or the so-called "freeband".

My amateur radio license allows me to use a 10 meter radio, even those on the FCC's list, on 10 meters, all nice & legal. If I want to sell a radio on the list to another ham, then that's all nice & legal.

As far as the existing stock in the distributors' & manufacturers' wharehouses, that's their problem. They can't sell them in the US, but they could export them if they wanted.

The difference between the distributors/manufacturers and me is that the FCC notice states that they cannot "import or market" any of the listed radios. It's obvious to me that the notice refers to commercial sales, not private person-to-person sales. The term "marketing" refers to commercial sales & promotion, including advertising. I doubt private sales of used gear fall under this category.

And, as I've stated before, they are completely legal for hams to use on 10 meters, modified or not. If you were a ham you would understand that there is no type-acceptance requirement for amateur radio gear.

I have to wonder why you are so hell-bent on this crusade to get rid of these radios when you yourself are not a ham? It has to be more than keeping intruders out of the 10 meter band.

You are correct that amateur equipment does not require type
acceptance. The FCC has defined the radios on the FCC BANNED LIST are
not legitimate amateur equipment. They are instead defined as being
"CB transmitters".

--
Some devices that manufacturers call "10-meter" radios either operate
on the CB frequencies as manufactured and imported or are designed
such that they can readily be activated by a user, a service
technician or a dealer to operate on CB frequencies. According to
Section 95.603(c) of the Commission's rules, a CB transmitter is a
transmitter that operates or is intended to operate at a station
authorized for the CB service. 47 C.F.R. Section 95.603(c). The
Commission's equipment authorization experts in the FCC Laboratory
have determined that the Mirage 2950 and other similar models at issue
here are intended for use in the CB frequencies as well as in the
amateur service because they have built-in capability to operate on CB
frequencies and can easily be altered to activate that capability,
such as by moving or removing a jumper plug or cutting a single wire.
Thus, they fall within the definition of a CB transmitter. See 47
C.F.R. Section 95.603(c).

--

Also thanks for confirming that hams may not legally purchase radios
on the FCC's BANNED LIST from distributors, or themselves act as
commercial distributors.

3818. Illegal 10 Meter Radios

Newsgroup: rec.radio.cb
Date: 2002-08-15 09:27:11 UTC
From: "Alan S." <subnet@hotmail.com>
Message-ID: <Xns926B1915A9923subnethotmailcom@216.168.3.40>
Source record: 132846

The "Legal issues with Ebutt" thread is getting pretty long, so I figured I'd weigh in on the Illegal 10 Meter Radio discussion by starting a new one.

There seems to be a great deal of disagreement regarding the legality of certain 10 meter radios. Some say they are legal, but only on Amateur frequencies, others say they are illegal to use on any frequency, and still some others have taken a middle of the road position stating that existing radios sold before the new rules went into effect are exempted. This discussion began in earnest after an FCC notice on the subject was posted. Before I address the issues point by point, I'd like to say that there would be little confusion if the FCC had addressed these concerns more directly. Still, I think the notice and the existing rules are sufficient to determine the FCC's position on the matter.

To begin, I will need make certain assumptions. First, the issue at hand is whether or not certain radios are legal or illegal, and under what circumstances. Second, it is my intention to interpret the FCC's position on the matter. Whether or not I agree with them is best left to another thread. Third, operating a radio in compliance with FCC rules is doing so legally. Operating a radio in violation of FCC rules is doing so illegally. That being said, only those concerned with operating in a legal manner will find this post relevant. Determining legality is of no consequence to those who don't intend to operate legally. I'm not here to pass judgement. This post is intended only to state what I believe to be the FCC's position. It's only an opinion.

The notice that started alot of this discussion is not actually a notice, it's a letter from Christopher J. Wright to John F. Atwood of the US Customs Service, dated May 17, 1999. In this letter, Mr Wright cites existing FCC rules in determining whether or not certain radios can be imported or marketed in the United States. Understanding this is crucial. At no point are new laws proposed. Existing laws are referenced by the Office of Engineering and Technology to show the Customs Service that the importing and marketing of certain radios is illegal. Here is a copy of the letter for reference:

http://swap.qth.com/fcc/fcc-cbtable2.htm

I don't feel the need to address whether or not these radios are legal for use on CB. It is my feeling that everyone involved in this issue acknowledges that they are in fact not legal for CB use. So, I will simply conclude that the FCC has determined that the radios listed are not legal for use on CB.

As to the issue of their legality for use on Amateur frequencies, the letter states:

"Thus, all the transceivers listed herein and similar models fall within the definition of a CB transmitter. See 47C.F.R. &#65533; 95.603(c). A CB transmitter must be certificated by the FCC prior to marketing or importation. 47 C.F.R. &#65533;&#65533; 95.603(c); 2.803."

Because the FCC has determined that the radios in question are in fact CB radios, they must be certificated. Since they are not certificated, they are not legal for marketing or importation. The language is very clear. It is important to note that the FCC made this determination by citing an existing law. The FCC has the authority to determine what is and what isn't a CB radio. The determining factors are listed in part 95.603. In the letter, the FCC determines that these radios are intended to operate on CB:

"According to Section 95.603(c) of the Commission&#65533;s rules, a CB transmitter is a transmitter that operates or is intended to operate at a station authorized for the CB service. 47C.F.R. &#65533; 95.603(c). The Commission&#65533;s equipment authorization experts in the FCC Laboratory have determined that the transceivers listed herein and other similar models at issue here are intended for use on the CB frequencies as well as those in the amateur service because they have built-in capability to operate on CB frequencies. This capability can be readily activated by moving or removing a jumper plug, cutting or splicing a wire, plugging in a connector, or other simple means."

One may argue that modifying these radios for use on CB is not as trivial a matter as FCC engineers think it is. That person may be right, but the FCC disagrees. Remember, the FCC's position on this matter is what we're after. It's also important to remember that the FCC has the authority to make the call. Disagreeing with them doesn't make using the radio on Amateur frequencies legal.

One may also ask, "OK the radios listed are illegal, but what about those 'similar models'?" If the radio is to be used on CB, then the answer is simple - It must be type accepted. If the radio is to be used on Amateur frequencies and ANY doubt exists, then you should contact one of the persons listed at the bottom of the letter. Remember, the FCC determines what is and what isn't a CB (right or wrong). If they determine that your radio is in fact a CB simply because they feel it is intended to operate on CB frequencies, then the radio is illegal. Unfortunately (and I mean this, it's sad) what you think doesn't matter. Is it worth the risk of an $11,000 fine? That's up to you.

To summarize: I conclude that existing FCC laws make the radios listed illegal to use on Amateur frequencies.

As to the question of whether or not these statements only apply to radios manufactured before a certain date: It is clear that no new laws were inacted making these radios illegal. Existing laws show that these radios have been illegal for quite some time. In short: They've been

illegal as long as part 95.603(c) has been around. Are radios manufactured and sold before that legal? I honestly don't know.

Take this for what it's worth, which isn't much. =) I honestly believe that I've correctly stated how the FCC feels about this. I'm no spokesman, so my opinion really doesn't matter. If you agree with me, great. If you don't, that's okay too. Ultimately, the decision to operate legally lies within the individual. You may not agree with my interpretation of the FCC's position. For your sake, I hope you're right.

-Alan S.

No shit. I didn't say anything about transmitting on the CB freqs or
what's known as the freeband. I was referring to 10 meters only. I
said, "As long as a ham has a valid license for HF, they can use a 10
meter radio to operate there." "There" meaning the 10 meter band.

He never said that it could be, Aanal Aaron! However, you have made a "blanket" statement that those 10-meter only radios are somehow "illegal", something you've never proven. He (along with several others, including myself) have said that YOU'RE WRONG; they ARE legal for use on the ten (and 12) meter amateur bands. They have NEVER been legal for use on CB.

Part 95 says absolutely nothing about amateur radio. Hams do not need to be concerned about Part 95 at all.

No "certain circumstances" about it. You are terribly confused and you've got no case.

Here we go folks: Aanal Aaron's famous "chicken side-step"! (strike up
the uumpah and kraut)

You never made that statement!! In fact, what YOU said was: These
radios "are illegal". Period. Now you're back-pedalling because you've
been proven wrong.

The radios are now prohibited from being "imported and marketed" new.
Existing radios can still be used, traded, sold, or even (gasp) bought
by properly licensed amateurs. And if someone with a ham license
wanted to risk their money at Copper to buy one from their remaining
stock, they most certainly can.

It is YOU who is generating the so-called "intentional confusion",
Aanal Aaron. Nobody else.

3823. So can anyone tell me who the "RATS" are around here ?

Ok guys,
I have been on and off this newgroup for the past 3 1/2 years. I am thinking of buying a new radio and asking some questions. Well, I skipped down through some of the postings and some people are constantly posting comments like " your posting is being forwarded to the FCC ". Don't these people have anything better to do than sit on here and threaten people ? You can bet your A$$ that these are the guys running more watts than anyone else and just want to keep Uncle Charlie off their butts. Why can't these guys keep to themselves and let the individual do as much bench testing as they like ?
Is there a message board that is monitored that I can join so that posers like these guys get banned when they make comments like this ?
Just wanting a list of these "rats", so I know to ignore their postings and comments.
Anyone help ?

Thanks,
Iowa883

If I use it on 10 meters, it is legitimate amateur equipment, not a "CB transmitter." And what's wrong with me selling it to another ham for use on 10 meters?

This says nothing about amateur radio. It states that the radios in question cannot be imported or marketed due to the fact that they either operate or can be easily modified to operate on the CB frequencies. In other words, you can't import them or sell them commercially.

> "According to Section 95.603(c) of the Commission's rules, a CB

Then the FCC might as well ban the importation & marketing of most HF amateur radio transcievers, since most can easily be modified by moving a jumper, cutting a wire, etc. Does this make them illegal for operation on amateur frequencies? No. But they could be considered "CB transmitters" by the above definition. Of course, amateur HF gear is marketed as such, and not really intended to be operated on CB frequencies. But occasionally it happens.

> One may also ask, "OK the radios listed are illegal, but what about those

Once again, there is no type-acceptance requirement for amateur radio gear. As long as you have a license and use the radio within the limits of your license, there's no such thing as an "illegal radio" for amateur use. Hams use modified commercial gear (business band, maritime, etc) and CB's on the ham bands. There's no law that says we can't as long as (a) it is used correctly on the amateur freqs, and (b) it doesn't exceed power limitations. Just about anything is acceptable, except for spark-gap transmitters. Even transcievers built totally from scratch are acceptable. If I built a 10 meter transceiver that just happened to cover the 11 meter band, too, it is perfectly legal to use it on 10 meters.

> To summarize: I conclude that existing FCC laws make the radios listed
> illegal to use on Amateur frequencies.

I conclude that you are wrong. It is perfectly legal to use these type radios on the ham bands, it is just illegal to import and market them, according to the FCC notice.

I am quite certain that I am right on this issue, but I will contact the FCC to confirm it.

Tom

OK, I called the FCC (1-888-CALL-FCC) to see if anyone there could settle the issue, but the lady I finally got through to didn't seem to know much about this issue or radio in general. Basically she said there shouldn't be any problem with those radios if they're operated legally on the ham bands. She referred me to Part 97 rules.

Undaunted, I decided to contact Mr. LaForge at rlaforge@fcc.gov. Here's a copy of the email I sent:

Hello,

Recently I have been reading a debate on the internet about the list of transceivers deemed illegal for import or marketing as CB transceivers. The list is as follows:

LIST OF TRANSCEIVERS
ILLEGAL TO IMPORT OR MARKET

GALAXY - models: DX33HML, DX 44V, DX55V, DX66V, DX 73V, DX 77HML, DX 88HL, DX99V and Saturn Turbo

CONNEX - models: 3300, 3300HP-ZX, 3300 PLUS and CX-3800

MIRAGE - models: 44, Galaxy 88, 9900 and 2950EX

NORTH STAR - models: NS-3000 and NS-9000

PRESIDENT - models: Grant, J.F.K., Jackson and Lincoln

PRO STAR - model: 240

RANGER - models: AR-3500 and RCI-2950

TEK - model: HR-3950

UNIDEN - models: HR-2510 and HR-2600

SUPER STAR - model: 121

I have two questions about these transceivers (and any others like them).
1. Are they legal for use (modified or not) on the amateur radio frequencies by licensed amateurs?

2. Are private sales of these transceivers (from one amateur operator to another) legal?

I appreciate you taking the time to answer my questions.

Tom

As soon as I get a reply I'll post it here.

Tom

Bert wrote:
"Excellent post.

And it was, but the gist of it is wrong, and here is why.

Alan wrote his interpretation as:
"Thus, all the transceivers listed herein and similar models fall within the definition of a CB transmitter. "

If the feds say they are non-type accepted cb's. then they are. That being said, they are not type certified (which they need not be for amateurs) and perfectly legal to operate on ten meter by authorized amateurs.

What does the ARRL have to say about CB?
Nothing that's important. Same as you and Aanal Aaron.

>There is nothing of importance that can be said of cb. <

It has the power and allure to keep you in line following us cbers.

Hasn't happened yet; what makes you think it ever will? They don't even
"police" the ham bands, with all the music being played and all that.
How about cleaning up your own bands before you worry about something as
innoculous as CB?

>Your mean something as obnoxious as cb.<

Read it again but this time fail to put words in another's mouth.

You seem to be confused about this. There is no type-acceptance requirement for amateur radio gear. These kind of radio transceivers are not illegal. They are only illegal to use to transmit outside the ham bands.
Tom

He isn't confused, just deliberately spreading disinformation. It's called ignorance due to impotence. Check the archives, this guys has never been correct, about anything.

I have to wonder why you are so hell-bent on this crusade to get rid of these radios when you yourself are not a ham? It has to be more than keeping intruders out of the 10 meter band.
Tom

It is, Tom. Check google for "Voobner" and you will see the sheer amount of access sites he had pulled for (gasp) violating usenet AUP's. He has had many incarnations of "Voobner", all pulled for violations. His aim is harassment, nothing less. He's a nocode.

No shit. I didn't say anything about transmitting on the CB freqs or what's known as the freeband. I was referring to 10 meters only. I said, "As long as a ham has a valid license for HF, they can use a 10 meter radio to operate there." "There" meaning the 10 meter band.
Tom

You're talking to an involuntary impotent individual that is unable to separate the two services.

On the contrary, it seems to be a much more worthwhile cause then some of the badgering going on here. Do a search on Voobner - I got over 9000 hits. Seems like the bandwidth could go to a better cause. The trolls on this group are not going to change anybody, just piss them off. In fact, if it weren't for the trolls I would not have seen the list of PROHIBITED EQUIPMENT which I then used for a shopping list to acquire my first 11 meter radio. These guys peaked my interest. I gave up on CB in the 70's, but with all this hoopla I wanted to see what 11 meters would do.Oh, and Voobner responded to someone about going to Ham Radio Outlet and ask for a radio with roger beep. Well, I did just that and they had several models (RCI 2950 included). Trolls have also lead me to Copper.com and other online sources. (Who is going to turn in HRO....Me?)

So, I must say THANKS FOR THE TROLLS who have furthered my hobby, conviently provided a shopping list of desirable radios, places to shop, and expanded me into the realm of 11 meter.

Until I became aware of how badly the bandits had proliferated the ham bands
I didn't bother with it. As I said, the outlaws can fry each others'
eyeballs with huge, arcing amps for all I care--until they start beeping and
squeaking in "my" pasture. It's simple, really; if the SOBs would stay in
their
own "yard", I wouldn't care. But since they are "tracking mud" in my house,
so to speak, then I will
do everything I can to have them removed, forceably if need be. And, yes,
that includes listening to
28.085, taking rest breaks at truck stops and checking to see if they have
any of the illegal radios,
recording, photographing, and reporting what I see and hear. Those who
remain where they are
supposed to be have nothing to fear from me; I don't care. Meantime, I will
be doing the above,
and joining my fellow hams in writing our Congressmen, some of whom are
hams, to try to get something done to abate the illegal intrusions onto the
bands. We WILL defend our "turf", no more, no less. Riley said to keep
those reports and websites coming.

Jerry

Well, here it is although those who have a vested interest in defending the
status quo will say I
just made it up. They are Riley's word verbatim.

Jerry

The accuracy of that is about 10%. What will probably happen is this: the
CB freebanders ones overpower will keep it up and cause so much public
outcry and interference that they'll draw the wrath of enforcement. Then
they'll be bitching and moaning about government interference, when they
brought it on themselves. Other notes: there is no "education fund". And,
there has to be spectrum rules just as we have to have road rules. CB could
contribute a lot to public communications needs instead of shooting itself
in the foot all the time and being a laughing stock.

I plan on installing a Firestik on a hood mount to a Ford F150. I know the roof would be better, but just can't bring myself to drill the big hole! My question is: What is my groundplane going to consist of with this configuration? Will the hood act as the plane or the fender, or just the mount? Any constructive suggestions would be appreciate - like whats the best way to get the feed to the radio.

Just wondering......

That kinda went without saying. Particularly with the rigs that were
actually evaluated OTA and reviewed by QST. If there was ever an
organization that steered well right of the FCC, it's the ARRL.

Please show where Part 95 has anything to do with amateur radio.

And, if you bother to read the notice that YOU posted, it says that
the radios are (as of the date of the notice) illegal to "import and
market". Existing stock may (of course) be sold, since it was imported
prior to the Notice, and to do otherwise would place a huge burden
(and loss) on some businesses.

Thus, IMHO, Tandy Corp blew it big-time by not filling their
warehouses with PRO-2006 scanners (which were cell-recoverable) since
they could actually have raised the prices and continued to sell them
until the warehouses were emptied. Same thing with ten meter radios.

Funny: The original box with my Uniden HR2600 plainly states that it
is a Ten Meter All Mode Amateur Transceiver. Doesn't say anything
about CB on the box or in the manual anywhere.

This was the FCC's interpretation not Alan's read it and weep
```

" The Commission's equipment authorization experts in the FCC Laboratory have determined that the transceivers listed herein and other similar models at issue here are intended for use on the CB frequencies as well as those in the amateur service because they have built-in capability to operate on CB frequencies. Thus, all the transceivers listed herein and similar models fall within the definition of a CB transmitter. See 47C.F.R. § 95.603(c). A CB transmitter must be certificated by the FCC prior to marketing or importation. 47 C.F.R. §§ 95.603(c); 2.803.

```
> If the feds say they are non-type accepted cb's. then they are. That
> being said, they are not type certified (which they need not be for
> amateurs) and perfectly legal to operate on ten meter by authorized
> amateurs.

Twisty then what is your take on this if it is illegal to import and
Illegal to sell, then how in the world you get your hands on one.
In view of the foregoing, the following "10-meter" transceivers are not
acceptable for importation or marketing into/within the United States.
Importation and marketing of these units is illegal pursuant to Section
302(b) of the Communications Act and Section 2.803 of the rules. Willful
violations of the Rules and the Act may subject the violator to a monetary
forfeiture of not more than $11,000 for each violation or each day of a
continuing violation. The Commission continues to review this type of
equipment, and additional makes and models may be added to this list in the
future.
```

LIST OF TRANSCEIVERS

ILLEGAL TO IMPORT OR MARKET

GALAXY - models: DX33HML, DX 44V, DX55V, DX66V, DX 73V, DX 77HML, DX 88HL, DX99V and Saturn Turbo

CONNEX - models: 3300, 3300HP-ZX, 3300 PLUS and CX-3800

MIRAGE - models: 44, Galaxy 88, 9900 and 2950EX

NORTH STAR - models: NS-3000 and NS-9000

PRESIDENT - models: Grant, J.F.K., Jackson, Lincoln, HR-2510 and HR-2600

PRO STAR - model: 240

RANGER - models: AR-3500, RCI-2950 and RCI-2970

TEK - model: HR-3950

UNIDEN - models: HR-2510 and HR-2600

SUPER STAR - model: 121

Does it really matter if they are illegal to import or sell?
If one was to tell the whole story about these radios
then the subject line would read .....

"Not entirely illegal 10 meter radios".

The truth is that these radios are not illegal to own, so individual
CB'ers have no real reason to have any interest on illegal imports.

Excellent, even-handed analysis.

I especially thought this was relevant and well-said:

"Remember, the FCC's position on this matter is what we're after. It's
also important to remember that the FCC has the authority to make the
call. Disagreeing with them doesn't make using the radio on Amateur
frequencies legal"

True, but if you use it, it must have come into your posession by some
means, perhaps legal, perhaps not. Your "potential use" of it does not
change the FCC's definition of it as a CB transceiver. If it is on the
banned list, it is "illegal to offer for sale" as defined in the FCC
notice.

> And what's wrong with me selling it to another ham for use on
> 10 meters?
>
> Tom

Good question. Private exchanges of these items (don't ask me where
you'd get a banned transceiver from) would appear to be no problem, as
long as you are not seeking a loophole for distributing these things
commercially. You might want to check with the FCC on it.

The hood, fenders, and roof will act as the groundplane/counterpoise. I wouldn't place it too close(back) near the roofline. The roofline will greatly effect your radiation pattern. I would just bite the bullet, and put it in the center of the roof. Get a Wilson 1000 if you do that.

But there's absolutely no FCC rule that states you cannot use them legally on ham frequencies. I wish you could understand this. There is no disagreement with the FCC. It is simply illegal to import or market them, not use them on 10 meters.

Man, you sure have a set of cajones! Most truckers I know wouldn't take
very kindly to this.

I have. I'm still waiting on the reply.

As far as "where you'd get a banned transceiver from," there are literally
hundereds if not thousands of them floating around out there, all of them
imported & marketed before the FCC notice was issued. Why is this so hard
to understand?

Hey ya' Jer! Ya need to clarify a few things for your newest cheerleader. He needs spoonfed. Regarding the 10% claim you set forth.....

>Well, I must again conclude with JerryO's ascertations to a certain extent. <<

I agree with your OPINION here. So if MY opinion is wrong here, it in sync with yours, which apparently may not be Riley's. Let's move on.

>Hollingsworth is personable and very easy to get along with,<<

Hollingsorth ISN"T easy to get along with? Ok, if he insists this is inaccurate, fine by me. Again, it is an opinion, and not one person, including Riley, may validate anothers.

> but let's get to the meat of the matter. It is not he alone that decides what enforcement will be, or where. <<

Ok, does he disagree with this statement?

>Matter of fact, he has way less authority than is attributed him. The best word to describe his actual day-to-day function is "liason."<<

Ok, maybe that title offended him. I'll concede he has a choice among choices. If he takes that as inaccurate, so be it.

>He also agrees that with the suncycle on a downward shift, cb complaints will remain basically what they have always been...a non-issue save for safety and severe repeated interference complaints and those drop with the skip conditions. <

Appears Riley is getting forgetful while on his soapbox lipservicing all you who bother the hell out of him with mundane matter. He may be giving so many of you pissed off hammies so much lip service that he's forgetting what he says. He has not only claimed cb complaints will continue to decrease, but has even revisited the issue and claimed they have decreased.
Of course, I don't expect to be believed or taken seriously, as I am just a low-life cber that was fortunate enough to stumble across an entire contingency of licensed individuals that frequent our cb playground on the internet and allow my uncanny ability to drive them (especially nocodes) underground and over the edge of sanity, and Riley is really a holdout from J. Edgar Hoover who has voice prints and digital directional imprints of me getting down on 555 with Germany last night.

> An anticipated return to what he believes is the loftiest goal before the FCC concerning hobby radio service, enforcement of amateur related activities, is his primary concern. <<

I have no doubt in my mind that he did not deny this statement. Ask him plain out what his primary concern is and if he claims anything other than amateur radio, I'll email him again with quotes, ask him when and why he changed his mind, and post the results. Fair enough?

>They have more potential to do harm and have always done so when compared to cb. <

This was opinion, accurate, but nevertheless conjecture. Riley (or you) gonna now call personal opinion inaccurate? Oh yea, he (or you) already did that to us once, huh?

>Concerning the truckstops selling cb, Jerry, I don't know where you received your information but Mr. Hollingsworth claimed that even IF the money was there to mount a campaign for what you claim, he would do his best to find a better use for it...such as an EDUCATION blitz. The MANDATORY initial certified warnings that are sent out to offenders are paid for from the "educational" fund. Any step beyond that is an entire different ballgame and is only one of many reasons for forfeiture and fines...an attempt to recoup the dollar spent.<<

Another easy one. If it isn't to simply recoup and have something to show for their "show of shows", ask the esteemed gent why they don't have the teeth to really fine these suckers and be done with it. You won't like the answer, and if you're putting forth any type truth concerning Riley's comments, it's obvious he probably won't tell you anyway. No one wants to recognize their own immortality and everyone is now aware Bush is a one termer and they are rightfully concerned with their own azz..Riley included.

> Cb has never been the concern to the FCC you have been putting forth, Jerry. Hollingsworth actually spoke of the overzealousness that self-consumes way too many hammies, and literally stated much of their behavior is WORSE than the cb "problem" they are presenting to report. <<

THIS, was in a rainreport last year and also in a speech. If you can't remember it, ask him, he will.

>He also has a sense of humor, shown by his statement that if the frustration level of many hammies who bother the FCC with trivial complaints concerning cb could be bottled and sold, the gases would be toxic.<<

He said something about hot air or hot gases in a speech concerning hammies policing of the airwaves when they can't even police themselves. Verbatim isn't important.

>One last note...Jerry, you claimed a rise in enforcement "pretty soon."..... <<

If the FCC is planning an upstart in cb enforcement while the feds are creating a massive buildup in Kuwait, let us know Jerry, 'cause the media was told something very different recently.

>If you know something he doesnt, give him a call and fill him in. Unless a private large windfall of a donation is dropped in their lap earmarked specifically for cb enforcement, the cash is not there for any raid-type commando operations on truck stops nation wide. <<

That's as accurate as yesterday's news.
He doesn't have the cash for this and he knows it.

>On the matter of public record for disbursements
(that doesn't cost a plump nickel if you know where to look), the money for the duration of Bush' first and last term is already accounted for<<

Bad choice of word dereliction on my behalf.
The FCC has their disbursement funds, but must JUSTIFY the use. He's too smart a man to even attempt a presentation for approval of a "cb only" enforcement campaign. Many hammies could learn from this guy.

> and if you would be so kind as to call your associate he would be more than happy to confirm what I just relayed to you, including clueing you in that not only are funds not available for a sole enforcement cb campaign, but NOTHING warrants it, especially a handful of hammies that pretend to be an angry mob of John Q. Public. Deceit has never worked but the truth will set you free. There is even a deficit in the FCC's budget through the end of the lil' shrub's one term.<<

If Riley would deny a deficit, he wouldn't have been APPOINTED to the position he was. Part of his job is ...oh hell, he's your buddy, you ask him word for word.

> Beyond that, the knights in shining armor that you hailed as the almighty saviors are looking for greener pastures, as they know their positions are dust come next presidential election.<<

Ask Mr. Riley what his plan is after the 'lil shrub contaminates more of our GI gene pool and gets tossed next election. Betcha he already has a private position lined up, but I'm not a gambling man. If he's honest, he'll tell you. If not, well, like you said, we'll just wait and see, now, hmmmm?

>My favorite verbatim quote: "Maybe if some of these amateurs (and I use the term loosely) were billed for the unproductive time spent by the FCC responding to their petty complaints some of the foolishness would stop."
Hint: When he spoke of foolishness, he wasn't referring to cbers. <<

The above I plagiarized shamelessly. Mr. Riley knows exactly where it came from.

>Now if you'll excuse me, I have a driver to warm up and a DX call to make to the coal country.<<

Hell, 'ol Riley probably keys up and says hello on triple 5 just like the rest of the hammies that say they don't. Notice they're selling the hell out of those voice changers lately? Probably the same lot that changes their identity on usenet on a regular basis..haha!

Another leap by our favorite "chicken side-step" guy. That is correct,
actuallt. If they are licensed and are running where they are supposed
to be, they're not illegal. That includes the so-called "illegal"
10-meter radios you're so obscessed with.

Your point? You don't have one.

Illegal to sell, then how in the world you get your hands on one. <

"Well, duh, there are plenty of used ones floating around out there. How
else are they showing up on ebay?
Tom"

Also, as these things (in question) are manufactured in another country,
they are quasi-inspected and tariffs are paid when they enter our
shores, thus making them abide by federal import regulations. How
illegal can they actually be? For everyone but amateurs and dealers.

How do you get around this?

LIST OF TRANSCEIVERS

ILLEGAL TO IMPORT OR MARKET

(list deleted, we've all seen it)

It does not say illegal to import or market for cb but OK for
amateur radio. It say "illegal to import or market" period.
That means that if they are imported and marketed in the US they
are illegal. But for those that have already been imported and
fall into the hands of hams and are used on 10 meters, I doubt the
FCC will say anything. So the question is, in the hands of a ham
using it on 10 meters is the radio still considered to be illegal?
Inquiring minds want to know.

That's pretty well the size of it. The hood is indeed part of the body;
with Ford having been within days of being shut down in Canada in the mid
70's for ignition noise, you can depend on it.

Wish I could give you some good advice on running the coax; seen a lot of
hood installations and have yet to see one that was worth a damn.
Generally cut the coax, leak into the cab, or do some other stupidity.

Good as in luck.

Mc**2

He's absolutely correct, Voobsie. Not only may I have Radio Moscow's old megawatt loudenboomer in my basement (and no doubt several other floors) I can put it on the air so long as I can meet the tech specs and keep it below 1500 Peak Envelope Power on the line. There is no rule. I can convert the rf scapel my dentist owns, and a stolen bug zapper if I can get it to work within the specs. And if I can lay my grubby hands on one of the listed rigs and feel like making it work on 28.6, no hoo hoo.

The list is used to warn and ultimately zap the dealers about selling rigs prior to certification, or type acceptance in the old parlance. These rigs will never be certified for CB or any other commercial use. By and large the receivers are not up to standard but that is the owner's problem not the FCCs.

The reality is that the Amateur Service has been inconvenienced enough by Outlaws from CB. As a practical matter, no amateur is about to be hassled for legal operation of this stuff even if it were illegal for us to own which it is not.

You are hereby convicted of straw-clutching, gnat-straining, and camel-swallowing. You are sentenced to be horse-whipped as soon as I can

get a horse.

Funny, I keep seeing these type posts on the internet, but have yet to hear those "geritol" roundtable nets. There are a few folks I talk with considerably - and those conversations usually involve IRLP, local repeater linking, antennas, computers, and - get this - even a discussion on theoretical physics. I even got a call from a guy on the radio asking me if I could provide a ride (seems I monitor 444.850 quite a bit and his radio was closer than the telephone) - he got his ride. I keep hearing those rumors but have yet to hear them on the air. Are you absolutely sure about what you said? (BTW, you have to discount 14.313 and some of the 75 meter trash. Those folks are refugees from Bellevue)

I don't. I worked in a VHF/UHF/trunking radio shop. They had all the prints they needed. Obviously, one does need the prints. At that point, assuming one has a good understanding of electronics, you don't need someone else's 'clip this' information. Eventually, you'll find most radios are well designed within the very tight budget the engineer was given. Making it better will likely require quite a bit of effort (not to mention addition components). Much of the 'clip this diode and change that resistor' do no good, and the person trying to follow said information will often make a mistake - which may well be followed by the release of a not inconsiderable amount of smoke.

I just checked the FCC Rule Book (part 97, amateur rules) I own, and the
ONLY type-acceptance requirement for any amateur gear is for amplifiers that
operate below the 2 meter band. And this is only for manufacturers. If I
built an amplifier from scratch, I would not need to get it certified.

There is no such thing as an "illegal radio" for amateur use.

Tom

3900. running my own cable on a volvo tractor

Newsgroup: rec.radio.cb
Date: 2002-08-16 00:16:08 UTC
From: John Smith <spamwanted@127.0.0.1>
Message-ID: <ajhg9l031bi@enews4.newsguy.com>

I drive a 95 white gmc volvo. I was thinking of running my own cable out to the antennas. Primarily due to the inherent fact that factory cabling sucks. Instead of doing the micky mouse wiring job they do, which you can't duplicate anyway, I was thinking of running the cable through the rubber boot where the steering mechanism goes through the firewall.
Single line from the radio through the wall, then a T-connector outside the wall.

Any comments on the idea?

Hey ya' Jer! Ya need to clarify a few things for your newest
cheerleader. He needs spoonfed. Regarding the 10% claim you set
forth.....

>Well, I must again conclude with JerryO's ascertations to a certain
extent. <<

I agree with your OPINION here. So if MY opinion is wrong here, it in
sync with yours, which apparently may not be Riley's. Let's move on.

It's not opinion; I cut and pasted his very words.

>Hollingsworth is personable and very easy to get along with,<<

Hollingsorth ISN"T easy to get along with? Ok, if he insists this is
inaccurate, fine by me. Again, it is an opinion, and not one person,
including Riley, may validate anothers.

???????Not sure of the gist of the above

> but let's get to the meat of the matter. It is not he alone that
decides what enforcement will be, or where. <<

So you don't think that the agents in the enforcement bureau pay attention
to the Legal Counsels
or those who are tasked with various aspects of enforcement? If not, then
why HAVE the position? His job is Special Legal Counsel to the Enforcement
Bureau for Amateur Radio. Duties
include enforcement of AMATEUR radio regulations which was certainly needed
prior to his appointment. It cannot be denied that the bands are MUCH
cleaner since he came onto the scene.
There will always be those who will test the limits. He outlined his plan
for accomplishing the tasks
back in 1999: 1) Rid the airwaves of the music-playing, foul-mouthed, trash
that infested certain
frequencies. 2) Encourage repeater owners to work out coordination issues.
3) Restore Amateur
Radio to the respect and ambassadorial status it should have. And, 4) Deal
with the intruders on
the 10 and 12 meter Amateur bands. That is EXACTLY what he has been doing.
I don't know
about your "figures" about funds that are influenced by your complete denial
and your vested interest in having the enforcement status quo maintained. I
don't recall speaking of a wholesale
sweeping down upon CBers by FCC agents in some sort of massive "witch

hunt", but, if you
look at the ARRL page, ARNewsline, and the FCC website, you will see where enforcement
activities have, indeed, increased WRT the users and sellers of those illegal "10 Meter" radios.
To wit, Derek's Trucking of Creedmoor, NC, Copper, EEI/ExportsRUS (were they the same?),
L & N Design, of Boise, Idaho, NYC Taxis, The Two Way Shop, Kennewick, WA, Yoshie
Nakamura, Palo Alto, CA, Truck N Travel Centers, Coburg, OR, Gary Gribble Trucking, Rock-
wood, PA, Mr. Trip Williams, Travelers' Rest, SC, Mr. Michael Kinney, Sherman Oaks, CA,
Mr. George Cairns (trucker), Waldron, AR, Mr. Carl Vincent, Lake Elsinore, CA, Mr. Mark Hanson, Wausau, WI, David Merrill, Wichita Falls, TX, Jerry Smith, Claymont, DE, Mr. McCreary, of a recent posting, Roper Electronics, of Tomah, WI, Flying J Travel Plazas, and Pilot
Truck Stops--nearly ALL of which are connected with the 10 meter issue. This is in contrast to
the way it was BEFORE Mr. Hollingsworth, and there were almost NO actions against CBers.
I would say that, while it still isn't enough and won't be until we are rid of the 10 meter roaches, it
sure looks like he is doing something

Ok, does he disagree with this statement?

>Matter of fact, he has way less authority than is attributed him. The best word to describe his actual day-to-day function is "liason."<<

Ok, maybe that title offended him. I'll concede he has a choice among choices. If he takes that as inaccurate, so be it.

His title is Legal Counsel for Amateur Enforcement

>He also agrees that with the suncycle on a downward shift, cb
complaints will remain basically what they have always been...a
non-issue save for safety and severe repeated interference complaints
and those drop with the skip conditions.

As far as distance is concerned, but it does not deal with the criminal intrusions
onto the Amateur bands, and I still predict that RH will continue to pursue the sellers
and users of illegal equipment. The internet isn't affected by "skip". Remember the
guy who was proudly displaying his 10,000 watt amp on his webpage for "squashing
mudducks"? It doesn't take much expense to browse the internet and mail a warning
letter. The legions are pretty safe within the confines of the 40 channels.......for now.

Appears Riley is getting forgetful while on his soapbox lipservicing all you who bother the hell out of him with mundane matter. He may be giving so many of you pissed off hammies so much lip service that he's forgetting what he says. He has not only claimed cb complaints will continue to decrease, but has even revisited the issue and claimed they have decreased.

Then why are there MORE actions against CBers than there were 4 years ago before RH came
onto the scene? Sounds to me like he is doing exactly what he said he'd do. So when did he make
these "claims"?

Of course, I don't expect to be believed or taken seriously, as I am just a low-life cber that was fortunate enough to stumble across an entire contingency of licensed individuals that frequent our cb playground on the internet and allow my uncanny ability to drive them (especially nocodes) underground and over the edge of sanity, and Riley is really a holdout from J. Edgar Hoover who has voice prints and digital directional imprints of me getting down on 555 with Germany last night.

> An anticipated return to what he believes is the loftiest goal before the FCC concerning hobby radio service, enforcement of amateur related activities, is his primary concern. <<

I have no quarrel with this.

that he did not deny this statement. Ask him
plain out what his primary concern is and if he claims anything other than amateur radio, I'll email him again with quotes, ask him when and why he changed his mind, and post the results. Fair enough?

I have never SAID his emphasis WAS anything other than Amateur Radio. But his duties include the PROTECTION of same from unlicensed intruders.

gonna now call personal opinion inaccurate? Oh yea, he (or you) already did that to us once, huh?

>Concerning the truckstops selling cb, Jerry, I don't know where you received your information but Mr. Hollingsworth claimed that even IF the money was there to mount a campaign for what you claim, he would do his best to find a better use for it...such as an EDUCATION blitz. The MANDATORY initial certified warnings that are sent out to offenders are paid for from the "educational" fund. Any step beyond that is an entire different ballgame and is only one of many reasons for forfeiture and fines...an attempt to recoup the dollar spent.<<

GOTCHA!! Fines received from forfeitures DO NOT go to FCC!!!! They go to the US
Treasury General Fund.

ne. If it isn't to simply recoup and have something to
show for their "show of shows", ask the esteemed gent why they don't

have the teeth to really fine these suckers and be done with it. You won't like the answer, and if you're putting forth any type truth concerning Riley's comments, it's obvious he probably won't tell you anyway. No one wants to recognize their own immortality and everyone is now aware Bush is a one termer and they are rightfully concerned with their own azz..Riley included.

You seem to be the only one privy to this info! Riley is not an appointed employee like the
commissioners. He was there WAY before Clinton, and even if Mr. Bush were not to be
re-elected (Not Likely), he will still be there. Remember Phil Kane, who was a career FCC
employee and retired from there? Try harder

>He also has a sense of humor, shown by his statement that if the frustration level of many hammies who bother the FCC with trivial complaints concerning cb could be bottled and sold, the gases would be toxic.<<

He said something about hot air or hot gases in a speech concerning hammies policing of the airwaves when they can't even police themselves. Verbatim isn't important.

>One last note...Jerry, you claimed a rise in enforcement "pretty soon."..... <<

OK. I was referring to Flying J Travel Plazas. According to Riley, in a previous conversation,
there is more action pending against them--along with Pilot Truck Stops.

If the FCC is planning an upstart in cb enforcement while the feds are creating a massive buildup in Kuwait, let us know Jerry, 'cause the media was told something very different recently.

>If you know something he doesnt, give him a call and fill him in. Unless a private large windfall of a donation is dropped in their lap earmarked specifically for cb enforcement, the cash is not there for any raid-type commando operations on truck stops nation wide. <<

It has already begun. See above.

>On the matter of public record for disbursements
(that doesn't cost a plump nickel if you know where to look), the money for the duration of Bush' first and last term is already accounted for<<

You've buried Mr. Bush way too soon. I'd take him over another wimpy, el-pinko,
weak-kneed liberal like Clinton or Al Gore ANY day.

a presentation for approval of a "cb only"
enforcement campaign. Many hammies could learn from this guy.

That was NEVER the intent--only to remove those stinkin' SOB's from the ham bands.

you would be so kind as to call your associate he would be more
than happy to confirm what I just relayed to you, including clueing you
in that not only are funds not available for a sole enforcement cb
campaign, but NOTHING warrants it, especially a handful of hammies that
pretend to be an angry mob of John Q. Public. Deceit has never worked
but the truth will set you free. There is even a deficit in the FCC's
budget through the end of the lil' shrub's one term.<<

What WARRANTS enforcement is the patently illegal, unscrupulous and just
plain wrong
intrusions of unlicensed persons "stealing" frequencies at will. And the
"l'il shrub", as you call
him, has more courage in his little toe than those leftist, pinko,
yellow-bellied cowards that
stank up the White House for the previous 2 terms.

If Riley would deny a deficit, he wouldn't have been APPOINTED to the
position he was. Part of his job is ...oh hell, he's your buddy, you ask
him word for word.

He wasn't "appointed" in the same way the incumbent administrations appoint
FCC Commissioners; He was/is a career employee.

are dust come next presidential election.<<

Bullshit.

y what his plan is after the 'lil shrub contaminates more of
our GI gene pool and gets tossed next election. Betcha he already has a
private position lined up, but I'm not a gambling man. If he's honest,
he'll tell you. If not, well, like you said, we'll just wait and see,
now, hmmmm?

>My favorite verbatim quote: "Maybe if some of these amateurs (and I use
the term loosely) were billed for the unproductive time spent by the FCC
responding to their petty complaints some of the foolishness would
stop."
Hint: When he spoke of foolishness, he wasn't referring to cbers. <<

You haven't heard how he REALLY feels about the CB service!!

here it
came from.

>Now if you'll excuse me, I have a driver to warm up and a DX call to
make to the coal country.<<

Hell, 'ol Riley probably keys up and says hello on triple 5 just like
the rest of the hammies that say they don't. Notice they're selling the
hell out of those voice changers lately? Probably the same lot that
changes their identity on usenet on a regular basis..haha!

Now you must admit you are truly stretching for a point. For my part,
I wouldn't be caught dead taking on 27.555--I don't need to; I have
thousands of
frequencies to choose from--all without worry about "perhaps" getting one of
those
letters.

Jerry

> I've been saying this since I arrived here.
>

That's really what I am saying. If the intrusions are not stopped and
enforcement were not forth-
coming, then those who feel it is OK to operate out of band would have no
qualms about moving
onto 33 MHZ, then to 53 MHZ, then to 21 MHZ, and so on----until these
intrusions cause ser-ious interference to some service, not necessarily the
ham bands. Ultimately, something WOULD
have to be done to prevent the use of radio spectrum from being set back 100
years--and at a much higher cost. This is where "some" draconian measures
like I have cited might come into play
IF CB radio became known to the general public as a nuisance. Other radio
users have just as much "right" (for lack of a better term for comparison)
to unmolested access to radio spectrum as
do CBers, and, therefore, a reasonable expectation of protection from such
interference as caused
by those who would flaunt the law. Sheer numbers of users (I would wonder,
tho, if cellphone users now outnumber CBers) do not make illegal operations
right.

Try a triple magnet mount up on top. Run the coax down the back window between the bed and cab. Come up thru one of the grommets underneath into the back seat or back of cab. Alot of people dont like magnet mounts. I was one till I got the F-150 supercab and found it's works good enough.
Good luck Joe 333 Springfield MO

That goes on today anyway. Not necessarily to the effect that so much serious interference is occuring, but outbanders are all over the HF and low-VHF bands. It's not just CB'ers, either. Fishing boat operators are all over the HF bands using frequencies they're not licensed for. There's an illegal net of outbanders on 6990 LSB nightly. Personally I don't have much of a problem with it as long as they're not in the ham bands or interfering with other services. If the FCC wasn't so impotent they could take care of the problems, but enforcement is almost nil.

Well, unless you actually see them using a radio illegal for CB use, there's
really no way to tell which truck at a truck stop or rest area is the
violator unless you're using DF techniques. Just be careful taking pictures
of trucker's CB's.

I appreciate your defense of the 10 meter band, but I really don't care what
happens on the CB band or freeband.

Well if he were really a ham, he'd realize that there is no type-acceptance
requirement for amateur radio transceivers.

Try not to create a safety problem with things around the steering shaft.

Coax fittings are not really weathertite as you will discover. Think this one out. Can be done but it will take a bit more than Red the Tech's patented super-sludge to keep the crap out of the insides of the coax. The outside you write off in the first 50 miles.

The T fitting implies that you are going to dual antennas which is fine but realize that the coax length between the T and the antenna is fairly critical and they do have to be equal. On most installations these are 75 ohm coax, too.

Use lots of tie downs and cable clamps. It it can get in the way of something it will; if it can flap in the wind it will.

Good Luck

> Inquiring minds want to know.

Once again, no. And for the umpteenth time: THERE IS NO SUCH THING AS AN "ILLEGAL" AMATEUR RADIO TRANSCEIVER. The idea of an "illegal" radio is obviously a CB'er thing.

There is absolutely no type-acceptance (certification) requirement for amateur radio transceivers. Any and all radios are completely legal to use on the amateur radio frequencies as long as the person using it has a license for that band, and the transmitter does not exceed any power limitations for that band. All the radios listed have a power output way under the 1500 Watt limit for 10 meters.

And the FCC notice does not make the radios "illegal." Nobody can confiscate them just because you own them (unless you're operating one in an illegal manner). The FCC notice states that it is illegal to "import or market" those radios. Existing 10 meter transceivers are legal to own and operate (on 10 meters by licensed hams).

Man, it's like talking to a brick wall sometimes. I can't wait to get the reply from the FCC to show it to you all.

Selling Herbal life now George? Is that the meaning of
your new sig file?

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

Yes George, your right, always, you are always
right, no matter what.............LMAO!
Lets put this in prospective, you post this drivel,
knowing darn well that it would cause some people
to flame. If you go on to a car group and tell people
that all headers are illegal, high powered head lights
are illegal, performance chips are illegal, you will be
called a troll. Same thing here, you did this purposely
to inflame others, so don't act like this was a useful
post.
You still can't hold a civil conversation without
the troll comments "Panty Queen" "Landwhale"
and whatever sort of other sexual, harassing innuendos,
can you.

RM> Good Luck

I'm no dummy when it comes to cb stuff. Been around it for over 30 years.
75 ohm coax on a cb? You must work for a trucking manufacturer.
It's 52 ohms from the radio to the antenna or you get a mismatch.
75 ohm is for tv.

My other consideration was to pop a hole out the back side of the sleeper in
a convenient place.
At least there, the hole is easily fixed when the cable is removed and not

noticeable.

Working with dual antenna systems is no problem for me. I just cut both cables at the same point at the same time.
Fit the plugs and go.

Could be a VOX box. Just talk into the mike and it switches the radio to
transmit for you.

Hi Tom. Amateur's dispensation from type acceptance is not being disputed by me, and never has been (see below). The phoney "10 meter radios" being sold to non-hams at venues such as truck stops (e.g. the soon-to-be busted "Flying J") are the issue. Any reasonably perceptive person can see that the distributors and manufacturers of phoney 10 meter radios (and CB amplifiers) are using amateur equipment's freedom from type acceptance as a loophole to get it on the market. Luckily the FCC recognizes that merely renaming poorly-disguised CB radios "amateur gear" is an obvious (and dishonest) ploy to exploit booming sales to truckers and "freebanders". Oddly, I have noticed that there are certain hams posting in CB newsgroups who would prefer that sales of this equipment to unlicensed individuals continue unmolested.

>So the fact that a "real" HF ham rig can be modified just as easily
>(if not easier) as these "export/10 meter" radios doesn't bother you?

No. Amateur gear does not require type-acceptance and never has. CB gear does. Hams are allowed to build, modify and operate their own equipment. CBers are not. By and large, hams have not abused their privileges. CBers have.

>There's lots of "Freebanders" running high priced ham rigs. Do you
>really think they just bought them to talk on the "Freeband" or do
you
>think they might be hams that talk on ham freqs as well?

If they are hams, they risk losing their licenses and paying large fines. A look at the RAIN report shows that enforcement action against these type of people is happening now more often. Apparently a number of hams whose licenses allow them vhf-only privileges figure they can get on HF by "freebanding". Pretty dumb, I'd say. (You don't know anyone who fits that description, do you?)

>Why haven't the companies done anything to keep hams from being able
>to modify these radios? Rat Shack did it with their last 10 meter rig
>.. they did
>it with their 2m and 70cm HT's and mobiles... why can't Icom, Yaesu
>and Kenwood do it?

If $2000 Yaesu FT1000MP's and Icom 756 Pro's start selling like hotcakes in truckstops, then perhaps the companies would be compelled to do something. But both you and I know it's the phoney '10 meter' radios that are aimed at the CB market being pushed by unscrupulous retailers that are at the root of the problem.

I could be wrong but it almost sounds as if you are trying to scare/blackmail law-abiding hams into silence by insinuating that if illegal clip-and-transmit '10-meter export' CB radios are unable to be manufactured, then it will somehow trigger the FCC to enact type-acceptance rules for real, legitimate ham gear.

Ain't gonna happen.

Most times you are right, this time you are not. If you simply put two 50 ohm loads on a T, you see 25 ohms and that is 2:1 at best and looks down on its load which can get a little tough on transistors.

So the trick is what for some reason I do not know is called a Q section. If you put an electrical (!) quarter wave of 75 between the antenna and the T you get about 100 ohms. Two of these in parallel give you 50 and everyone marchs arm in arm into the sunset.

Actually a pretty common stunt. The trick is the electrical quarter-wave.

Ermmm; Aanal Aaron, the Notice does NOT say "illegal to offer for
sale". It states that it is no longer legal to "import and market".
There is a huge difference in terminology. Somehow that continues to
evade your understanding.

BTW, what was the Number and Date of the Notice? You never gave us the
facts.

> -Aaron-

Another of your famous "chicken side-steps"!! All along you've been
saying that individual sales were "illegal". Now you're changing your
tune again. Which is it?

BTW, you can get those "banned transceivers" almost anywhere; I see them at hamfests all the time. Another poster said he saw them at HRO. I bet Copper still has some in stock, too. You really need to get out more often! However, they are not "banned"; they have been prohibited from "import and market". That doesn't even imply what you're trying to twist it into.

He isn't. He once (allegedly) stated that he was studying for his
license exam. Given the amount of time he wastes here and trolling on
eBay looking for "illegal" auctions, he isn't spending much time
studying! ;)

I really don't concern myself with "who"., that's how these guys achieve
sticky palms.
There are several on here who have traced and pinged him down to the
second he posts.
Maybe you'll get an email from the one who did the legwork, it's quite
impressive and leaves no doubt. I can give you two known facts...more
than one has posted as "Aaron" here in the past (Frank was replying to
his own posts on google prior to them even showing up) and only one
other person has lost as MANY emails and access to the group for
violating rules as Aaron...KC8LDO. Look him up, he attributes his
popularity to cbers bootlegging him..... Hell, if cbers were gonna
bootleg a call, we'd use a movie star or Riley's or someone worthy.
One can always tell when the google account is shared..Lelnad can't mask
his personal anger as well as Frank. Frank CAN be pleasant if the mood
so strikes him, so can George, but George isn't full of malice (it's
vinegar) and says what he wants out in the open.

When he said 75 Ohm, he was referring to using dual antennas. In such instances, you need a phasing harness (Y Cable) made withg 75 ohm to get the proper match. We're all assuming dual antennas because he talked about a T connector just inside the firewall.

Darn you Scott, to damn logical. Your right.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

If you have ever had your TV interfered with, or heard loud voices
swearing
on your stereo or computer speakers, you have been the victim of a
"CBer"
using an illegal amplifier. CB radios are permitted only 5 watts of
power
output by the FCC.

Yet many CBers use illegal RF amplifiers in defiance of the law.
These
"outlaw CB" guys think they can get away with it and laugh in the

publics face.
Here is one of the worst, (below) a fellow who makes a living from
selling
these things and promoting their use.

If you want to help, send a short note to INFO@FCC.GOV and perhaps
copy this
email as reference.

Thank you,
A. Voobner

Here's a post where he reported a ham selling an amp at
a ham fest.

But the numbers tell a different story. One of a parasitic troll, who lives not under a bridge - but on rec.radio.cb

MIBX postings numbers (dynamically assigned):
152.163.197.67, 205.188.200.33,
205.188.198.163, 205.188.198.188

"AKC" group numbers (dynamically assigned):
64.12.102.49, 64.12.105.29,
64.12.105.34, 152.163.213.59,
152.163.213.82, 152.163.213.178,
205.188.193.152, 205.188.193.176

Aarons numbers (also dynamically assigned):
64.12.103.48 64.12.103.54
64.12.105.23 64.12.105.29
64.12.105.33 64.12.105.39
152.163.195.206 152.163.201.194
152.163.201.209 152.163.201.213
152.163.207.52 152.163.207.62
152.163.213.58 152.163.213.184
152.163.213.197 205.188.196.26
205.188.196.44 205.188.198.178
205.188.199.167 205.188.200.31
205.188.201.197 205.188.201.203

Conclusions...
1. Aaron posted the crap, but is happy to pass the blame.
2. Aaron is a parasite. He creates hostility, anger, and conflict - then feeds off it.

Niether do I unless they come creeping and slithering onto the ham bands.
If we don't protect
what we have, our bands will become ever more polluted with intruders, and,
after all, if they are
so bold as to "explore" the 10 and 12 meter "rooms" and find no resistance,
they will continue to
expand and grow in numbers like weeds going on to pollute other services as
well. It's like voting:
we cannot sit back and let "somebody else" do it. If we don't act to
protect and preserve our bands, nobody else is going to, either. Those
actions can include recording, photographing the
offending trucks, writing down tag #s, visiting truck stops and reporting
the sale of illegal radios,
AND writing your Congresspersons. The sponsors of the bill to exempt hams
from CC & R
covenants, at least two of them, are hams. We have pretty good press right
now with Congress
and State legislatures. Now is a good time to mount a letter writing
campaign to get something

done about this crap. If we sit back and do nothing, we are assured to LOSE the use of the bands
(interference) AND possibly the bands themselves to commercial interests because the bands aren't
being used in the manner for which they wre intended. So, Tom, get your pen and start writing!

And THAT can be changed if those affected adversely by interference write
their Representatives
and the sponsors of the current CC & R Bill and ask that something be done.
If enough of us demand that something be done, then Congress would act to
enable FCC to do their jobs. It IS
ludicrous to charge an agency with a task and then imasculate it so that its
efforts are hampered.

Landshark,

I notice you use the above reference to constitutional freedoms in
comparison to radio, but I am
baffled as to the connection with radio. Like driving an automobile, the
use of a transmitter, even in some cases, the use of a receiver, are
PRIVILEGES granted by the government. There is no "right" to drive a car;
your license can be revoked for cause. Likewise, the use of a radio is by
permission, and that privilege can be suspended or revoked as well. By
requiring a license, or
denying a person the use of certain segments of radio spectrum, it is our
government that retains
full control of its citizens' use of radio. That control HAS been
challenged on a number of cases
(where idealistic and overly zealous lawyers mis-interpreted the same phrase
you have quoted) and
been struck down by the courts. The reasons for central control of this
particular issue were made
clear and the attending needs for regulation were established long before
you and I were born.

Some people do idealistically believe that they have a "right" to use a CB
radio that can't be inter-
fered with. Some, not all, believe this means that CB = Deutchland uber
alles, or a rough comparison would be "CB Over ALL", and no one else but
them have the same privileges. The
almost "cultish" aura and folk attraction, coupled with their ignorance of
the hows and whys, then
emboldens them to move into the bands allocated to others. That "Ah've got

mah 'r'ahts' attitude
coupled with the absence of enforcement for over 10 years further aggravates
the condition. And
they compare this non-existent "right" with the phrase you quoted.

The truth is, radio of all kinds and uses has NO relationship to the above
phrase. Radio wasn't even
thought of when that was first written; Ben Franklin was out in his yard
trying to get shocked with a
kite. Radio neither restricts nor bears upon Freedom of Speech and is a
totally different issue.

Not trying to be smarty, but why do you keep quoting the phrase unless you,
too, believe in the
unrestricted overrunning of radio by unregulated operators?

Jerry

Twistedhed <twistedhed@webtv.net> wrote in message
news:24200-3D5C2A2D-65@storefull-2312.public.lawson.webtv.net... Hey ya'
Jer! Ya need to clarify a few things for your newest cheerleader. He
needs spoonfed. Regarding the 10% claim you set forth.....
Well, I must again conclude with JerryO's ascertations to a certain
extent. <<
I agree with your OPINION here. So if MY opinion is wrong here, it in
sync with yours, which apparently may not be Riley's. Let's move on.

>It's not opinion; I cut and pasted his very words. <<

Let's start over. I was agreeing with many of your ascertations. If
Riley disagrees with MY opinions there, he disagrees with yours as well,
as I was AGREEING with you with certain aspects we were discussing.
Such as:
Hollingsworth is personable and very easy to get along with

Hollingsorth ISN"T easy to get along with? Ok, if he insists this is
inaccurate, fine by me. Again, it is an opinion, and not one person,
including Riley, may validate anothers.
???????Not sure of the gist of the above
but let's get to the meat of the matter. It is not he alone that
decides what enforcement will be, or where. <<

>So you don't think that the agents in the enforcement bureau pay
attention to the Legal Counsels
or those who are tasked with various aspects of enforcement?<<

Try calling a field office with some pertinent questions that are basic
for any fed employed by the FCC and let me know if you think they are
capable of managing your grocery listt alone what you have in mind.

> If not, then why HAVE the position? <<

Figurehead.

>His job is Special Legal Counsel to the Enforcement Bureau for Amateur
Radio. Duties
include enforcement of AMATEUR radio regulations which was certainly
needed prior to his appointment. It cannot be denied that the bands are
MUCH cleaner since he came onto the scene. <<

I also agreed here with you, as I have no reason to doubt you as I don't
concern myself all that much anymore with hammie radio.

>There will always be those who will test the limits. He outlined his plan for accomplishing the tasks
back in 1999: 1) Rid the airwaves of the music-playing, foul-mouthed, trash that infested certain
frequencies. 2) Encourage repeater owners to work out coordination issues.
3) Restore Amateur
Radio to the respect and ambassadorial status it should have. And, 4) Deal with the intruders on
the 10 and 12 meter Amateur bands. That is EXACTLY what he has been doing. <<

Yea, but your tune has changed now Jer. WE were talking of cb enforcement and you now are focusing on amateur.....not related.

>I don't know
about your "figures" about funds that are influenced by your complete denial and your vested interest in having the enforcement status quo maintained. I don't recall speaking of a wholesale
sweeping down upon CBers by FCC agents in some sort of massive "witch hunt", but, if you
look at the ARRL page, ARNewsline, and the FCC website, you will see where enforcement
activities have, indeed, increased WRT the users and sellers of those illegal "10 Meter" radios.<<

I don't see that at all. I mean, no matter what the hammies are telling eachother in print, the fact remains they are still there, always have been, and at no less avail.

>To wit, Derek's Trucking of Creedmoor, NC, Copper, EEI/ExportsRUS (were they the same?),
L & N Design, of Boise, Idaho, NYC Taxis, The Two Way Shop, Kennewick, WA, Yoshie
Nakamura, Palo Alto, CA, Truck N Travel Centers, Coburg, OR, Gary Gribble Trucking, Rock-
wood, PA, Mr. Trip Williams, Travelers' Rest, SC, Mr. Michael Kinney, Sherman Oaks, CA,
Mr. George Cairns (trucker), Waldron, AR, Mr. Carl Vincent, Lake Elsinore, CA, Mr. Mark Hanson, Wausau, WI, David Merrill, Wichita Falls, TX, Jerry Smith, Claymont, DE, Mr. McCreary, of a recent posting, Roper Electronics, of Tomah, WI, Flying J Travel Plazas, and Pilot Truck Stops--nearly ALL of which are connected with the 10 meter issue.
<<

You haven't actually compared actions before the last year or so, but that's ok because you were probably weren't aware of the quactions due to the lack of coverage since hammies equate publicity of this activity as an increase.

>This is in contrast to
the way it was BEFORE Mr. Hollingsworth, and there were almost NO actions against CBers. <<

There has always been actions against cbers. They just weren't
publicized to the extent now.

>I would say that, while it still isn't enough and won't be until we are
rid of the 10 meter roaches, it
sure looks like he is doing something <<

Ok, does he disagree with this statement?
Matter of fact, he has way less authority than is attributed him. The
best word to describe his actual day-to-day function is "liason."
Ok, maybe that title offended him. I'll concede he has a choice among
choices. If he takes that as inaccurate, so be it.

>His title is Legal Counsel for Amateur Enforcement <<

But I bet he don't have a patch that says it.

He also agrees that with the suncycle on a downward shift, cb
complaints will remain basically what they have always been...a
non-issue save for safety and severe repeated interference complaints
and those drop with the skip conditions.

> As far as distance is concerned, but it does not deal with the
criminal intrusions
onto the Amateur bands, and I still predict that RH will continue to
pursue the sellers
and users of illegal equipment. <<

And the rule violators will wane with the decrease of skip.

>The internet isn't affected by "skip". Remember the
guy who was proudly displaying his 10,000 watt amp on his webpage for
"squashing
mudducks"? It doesn't take much expense to browse the internet and mail
a
warning
letter. The legions are pretty safe within the confines of the 40
channels.......for now. <<

Also said that if you make noise, someone will answer your call.

Appears Riley is getting forgetful while on his soapbox lipservicing all
you who bother the hell out of him with mundane matter. He may be giving
so many of you pissed off hammies so much lip service that he's
forgetting what he says. He has not only claimed cb complaints will
continue to decrease, but has even revisited the issue and claimed they
have decreased.

>Then why are there MORE actions against CBers than there were 4 years
ago before RH came
onto the scene? Sounds to me like he is doing exactly what he said he'd
do. So when did he make
these "claims"?<<

Happens each cycle.

Of course, I don't expect to be believed or taken seriously, as I am just a low-life cber that was fortunate enough to stumble across an entire contingency of licensed individuals that frequent our cb playground on the internet and allow my uncanny ability to drive them (especially nocodes) underground and over the edge of sanity, and Riley is really a holdout from J. Edgar Hoover who has voice prints and digital directional imprints of me getting down on 555 with Germany last night.
An anticipated return to what he believes is the loftiest goal before the FCC concerning hobby radio service, enforcement of amateur related activities, is his primary concern.

>I have no quarrel with this. <<

that he did not deny this statement. Ask him plain out what his primary concern is and if he claims anything other than amateur radio, I'll email him again with quotes, ask him when and why he changed his mind, and post the results. Fair enough?

>I have never SAID his emphasis WAS anything other than Amateur Radio. But his duties include the PROTECTION of same from unlicensed intruders. <<

gonna now call personal opinion inaccurate? Oh yea, he (or you) already did that to us once, huh?
Concerning the truckstops selling cb, Jerry, I don't know where you received your information but Mr. Hollingsworth claimed that even IF the money was there to mount a campaign for what you claim, he would do his best to find a better use for it...such as an EDUCATION blitz. The MANDATORY initial certified warnings that are sent out to offenders are paid for from the "educational" fund. Any step beyond that is an entire different ballgame and is only one of many reasons for forfeiture and fines...an attempt to recoup the dollar spent.

>GOTCHA!! Fines received from forfeitures DO NOT go to FCC!!!! They go to the
US
Treasury General Fund.
ne.<<

I never claimed they went to the FCC, just that they needed to explain where the money went and something to show for it....cash is always the best, even above confiscation of equipment.
Where the money goes is irrelevant for the moment.

If it isn't to simply recoup and have something to show for their "show of shows", ask the esteemed gent why they don't have the teeth to really fine these suckers and be done with it. You won't like the answer, and if you're putting forth any type truth concerning Riley's comments, it's obvious he probably won't tell you anyway. No one wants to recognize their own immortality and everyone is now aware Bush is a one termer and they are rightfully concerned with their own azz..Riley included.

>You seem to be the only one privy to this info! <<

Nah! Not really. The Bush administration has been denying the ailments caused by the Persian Gulf and is getting ready to contaminate more of our boys. The country ain't that stupid...he's outta here after this term.

>Riley is not an appointed employee like the
commissioners. He was there WAY before Clinton, and even if Mr. Bush were not to be
re-elected (Not Likely), he will still be there. Remember Phil Kane, who was a career FCC
employee and retired from there? Try harder <<

He was appointed, Jerry, not voted or proxied.

He also has a sense of humor, shown by his statement that if the frustration level of many hammies who bother the FCC with trivial complaints concerning cb could be bottled and sold, the gases would be toxic.

He said something about hot air or hot gases in a speech concerning hammies policing of the airwaves when they can't even police themselves. Verbatim isn't important.
One last note...Jerry, you claimed a rise in enforcement "pretty soon."..... <<

>OK. I was referring to Flying J Travel Plazas. According to Riley, in a previous conversation,
there is more action pending against them--along with Pilot Truck Stops. <<

Hokey doke!
Hey, let's check something out. Let's see if any of them truckstops that were popped in the past have any "questionable" gear for sale. If a business grosses, (hypothetically of course, as we all know there is no money to made from amps) say, $150,000 smackaroos, and the cost of a fine is 17 grand...do the math, Jer. It's chalked up to a business expense, and probably even wrote off on the taxes so as to recruit some of the "necessary" expenses, as they do with advertising.

If the FCC is planning an upstart in cb enforcement while the feds are creating a massive buildup in Kuwait, let us know Jerry, 'cause the media was told something very different recently.
If you know something he doesnt, give him a call and fill him in.
Unless a private large windfall of a donation is dropped in their lap earmarked specifically for cb enforcement, the cash is not there for any raid-type commando operations on truck stops nation wide.

>It has already begun. See above.<<

K.

On the matter of public record for disbursements
(that doesn't cost a plump nickel if you know where to look), the money for the duration of Bush' first and last term is already accounted for<<

>You've buried Mr. Bush way too soon. I'd take him over another wimpy, el-pinko,
weak-kneed liberal like Clinton or Al Gore ANY day. <<

So would many others. No matter, he's gone at election time.

a presentation for approval of a "cb only" enforcement campaign. Many hammies could learn from this guy.

>That was NEVER the intent--only to remove those stinkin' SOB's from the ham bands.<

And again, you, nor anyone else has ever taken it on the chin for your position on such. That is a great thing, but when you start patrolling for cbers that have nothing to do with that, you're causing a problem by trying to act as an "inspector" for illegal activities, even if none exist.

you would be so kind as to call your associate he would be more than happy to confirm what I just relayed to you, including clueing you in that not only are funds not available for a sole enforcement cb campaign, but NOTHING warrants it, especially a handful of hammies that pretend to be an angry mob of John Q. Public. Deceit has never worked but the truth will set you free. There is even a deficit in the FCC's budget through the end of the lil' shrub's one term.

>What WARRANTS enforcement is the patently illegal, unscrupulous and just plain wrong
intrusions of unlicensed persons "stealing" frequencies at will. <<

Agreed. But in the same breath, so does hammies intruding on cb, which, I may venture to guess, is plenty more frequent than cbers intruding on hammie bands. But somehow, you don't see this as "stealing" the bands as you do cbers, even though, they have NO right to be there with their hammie radios. What's good for the thief cber is good for the thief hammie.

>And the "l'il shrub", as you call
him, has more courage in his little toe than those leftist, pinko, yellow-bellied cowards that
stank up the White House for the previous 2 terms.<<

Don't get me started. Because of the
likes of Starr and HIS commie pinkos, the Russians and Chinese were stealing and robbing us blind because the republicans were too busy worried about Bill's pee-pee instead of national security. Hell, even McCain warned back in 98 that national attention needs to be on national security. But how could the republicans focus on that when those "yellow bellied cowards" intentionally diverted all that attention away from security by doing what every president (except Reagan) has done....have sex in the White House.
Drudging up the most sexual voyeuristic republican party ever known that professes morality is declining is a hoot., They have the bull by the horn and are leading the way to Babylon.

If Riley would deny a deficit, he wouldn't have been APPOINTED to the position he was. Part of his job is ...oh hell, he's your buddy, you ask him word for word.

>He wasn't "appointed" in the same way the incumbent administrations appoint FCC Commissioners; He was/is a career employee.
are dust come next presidential election.<<

what his plan is after the 'lil shrub contaminates more of our GI gene pool and gets tossed next election. Betcha he already has a private position lined up, but I'm not a gambling man. If he's honest, he'll tell you. If not, well, like you said, we'll just wait and see, now, hmmmm?
My favorite verbatim quote: "Maybe if some of these amateurs (and I use the term loosely) were billed for the unproductive time spent by the FCC responding to their petty complaints some of the foolishness would stop."
Hint: When he spoke of foolishness, he wasn't referring to cbers.

>You haven't heard how he REALLY feels about the CB service!! <<

It can't be any worse than what he has said about many hammies. Adding to that, cbers don't give a rat's tail what he thinks. He is of no consequence to most of us...nada!

Hell, 'ol Riley probably keys up and says hello on triple 5 just like the rest of the hammies that say they don't. Notice they're selling the hell out of those voice changers lately? Probably the same lot that changes their identity on usenet on a regular basis..haha!

>Now you must admit you are truly stretching for a point. <<

Absolutely.
I don't take it serious, Jer. It's not that big a part of my world, which is why I have had nothing to fear all hese years. The part about Riley keying on 555 was a stretch...te part about hammies keying dow , wasn't. I already found one poor slob in Michigan trying to key on me, and when he couldn't, he came out here and started trouble...only place he may be heard, as his hammie equipment didn't have the ass for where he was trying to key.

>For my part, I wouldn't be caught dead taking on 27.555--I don't need to;<<

You know Jerry, I still believe that of you so far, but a few of your contemporaries say the same thing and are notorious liars. See, they DO key up there.

> I have thousands of
frequencies to choose from--all without worry about "perhaps" getting one of those
letters.
Jerry<<

And I wish you well on those freqs. However, patrolling them for one of the same voices that appear on triple 5 desn't hold the same appeal for me as it does for you.
And since the early 70's, I have never worried aout "perhaps" or "maybe" gettng any type letter. In all fairness, it was you that made me aware of certain freqs to steer clear of. I hae never used those freqs anyways, but since that time I have listened for activity there and ust didn't find any.
Look, I know Riley is trying to do what he promised, and you had me admit a certain stretch concerning RILEY on 555, now I would like to ask you something similar. Just looking at this group and the other hammie groups, do you honestly feel these no/good/code
hammies that are filling the boards with shit suddenly change their ways on the air?
You ought start with your own kind, Jer, as it ain't cbers that are messing up your service anywhere near the magnitude hammies are messing it up for themselves.

From JerryO via Riley:
What will probably happen is this: the CB freebanders ones overpower
will keep it up and cause so much public outcry and interference that
they'll draw the wrath of enforcement.<<

I've been saying this since I arrived here.

>That's really what I am saying. If the intrusions are not stopped and
enforcement were not forth-
coming, then those who feel it is OK to operate out of band would have
no qualms about moving
onto 33 MHZ, then to 53 MHZ, then to 21 MHZ, and so on----until these
intrusions cause ser-ious interference to some service, not necessarily
the ham bands. Ultimately, something WOULD
have to be done to prevent the use of radio spectrum from being set back
100 years--and at a much higher cost. This is where "some" draconian
measures like I have cited might come into play
IF CB radio became known to the general public as a nuisance. Other
radio users have just as much "right" (for lack of a better term for
comparison) to unmolested access to radio spectrum as
do CBers, and, therefore, a reasonable expectation of protection from
such interference as caused
by those who would flaunt the law. Sheer numbers of users (I would
wonder, tho, if cellphone users now outnumber CBers) do not make illegal
operations right.
J<<

Agreed...almost. It appears as you use the terms
"freebanders" and
"ten meter intruders" interchangeably.
Don't even get me started on cell phones. Society has been intentionally
dumbing down and walking and chewing gum is regarded as some type
accomplishment, such as some getting the nocode entry tcket as such.
Neither is the case, so the only solution is to ban cell phones while
driving.

JerryO wrote:
Niether do I unless they come creeping and slithering onto the ham bands. If we don't protect
what we have, our bands will become ever more polluted with intruders, and, after all, if they are
so bold as to "explore" the 10 and 12 meter "rooms" and find no resistance, they will continue to
expand and grow in numbers like weeds going on to pollute other services as well. It's like voting:
we cannot sit back and let "somebody else" do it. If we don't act to protect and preserve our bands, nobody else is going to, either. Those actions can include recording, photographing the offending trucks, writing down tag #s, visiting truck stops and reporting the sale of illegal radios,
AND writing your Congresspersons. The sponsors of the bill to exempt hams from CC & R
covenants, at least two of them, are hams. We have pretty good press right now with Congress
and State legislatures. Now is a good time to mount a letter writing campaign to get something
done about this crap. If we sit back and do nothing, we are assured to LOSE the use of the bands
(interference) AND possibly the bands themselves to commercial interests because the bands aren't
being used in the manner for which they wre intended. So, Tom, get your pen and start writing!
73
Jerry<<

Hey, this one got me to thinking.....hammies more than likley started encroaching on the cb band ith their hammie radios after 27 was given to cbers. Wouldn't that make the hammies that drew first blood and broke fedral law?
Difference is, us cbersare a friendlier lot. We really don'tgive a rat's azz if a hammie talks on cb,,,we'lll talk to him anyways...probably why they come on down in the first place,,,so they can escape the frequency fuzz and just......enjoy radio.

Neither is the case, so the only solution is to ban cell phones while
driving.

Now HERE's something we can agree on! Neither CB or ham operators have
caused as much
havoc and mayhem on the streets as that caused by Mary Q. Public while
driving AND in Lala land
on their cell. I often remark that there are so many people are using
cellphones that young girls now
believe that they have to have a cellphone to their ear before their car
will start; that's the first thing
they do when they get in--cellphone to ear, key in switch, put in gear, then
drive off.

I was actually put onto the sidewalk by a lady in a van on a cell. I was in
the curb lane at 35 MPH,
she was in the CENTER lane just a half car length ahead of me. Because she
was so out in space
on her phone, she suddenly realized that she had missed her turn into a
shopping center and cut across in front of me and into the shopping center!
SCREEEEEEEEECH! I swerved to keep from T-boning her and her little kids,
and found my self traveling down the sidewalk narrowly missing a concrete
light pole base (by mere inches), and sliding to a stop. I then drove down
to the
next driveway and followed the lady into the center who never offered to
stop when she ran me out
of the road. I rolled down my window, "Lady, did you even SEE what you just
did?" "Waaaal, I did after I turned" "Yeah, and you could've severely
injured your kids, me, and my 88 year old Dad"! " Well, I SAID I was sorry
(sarcastic tone)". I was so mad that I was afraid I might get into
trouble by arguing with her, so I drove away. Cellphones and driving don't
mix. Don't know why
they don't, and I don't know why talking on a radio doesn't take away one's
attention as badly, but
it just does.

Message-ID: <3D5D48D3.83707B0E@icok.net>
Source record: 133032

To answer the original question...

The 'groundplane' of an antenna for 27 Mhz for a
mobile consists of all the vehicle's body panels that
make good electrical contact. That includes the roof,
hood, fenders, and trunk lid. It also includes the
frame, and undercarriage of the vehicle, the axles and
wheels, plus the earth under the vehicle by capacitive
coupling. This 'groundplane' is the same no matter if
the antenna is mounted on the vehicle's hood, or roof,
provided that all component parts of the vehicle make
good electrical contact. If a mag-mount antenna is used,
the capacitive coupling of the magnets also has to be
taken into account. Moving the antenna from the hood to
the roof doesn't change what the groundplane consists of,
it only changes the groundplane's distribution in relation
to the antenna. This change in distribution doesn't
change the groundplane's effectiveness, but it does change
the antenna's radiation pattern and characteristics.

John,
I'm afraid you will have to use two sections
of 75 ohm coax for proper impedance matching, if
you're going to use 'dual' antennas. When these
75 ohm sections are combined in the correct manner,
they result in an impedance of about 36 ohms at the
"T". When that 36 ohms is combined with the 50 ohm
coax from the "T" to the radio, the resulting
impedance is about 43 ohms, which is 'close enough'
for your radio do be 'happy' with the match (some-
thing close to 1.2:1 SWR). This whole mess is called
a "conjugate-match", and is common when phasing 'dual'
antennas.
'Doc

PS - Actually, using two matching sections of 93 ohms
coax would be even better. The problem with that
is that 93 ohm coax isn't that common.

Interesting concept. In the past, I've always used standard 52 ohm for both.
In cars, when i check the swr, it's always so close it's pathetic.
Either way, the one thing you don't want to do, is use two different types
of antennas.

If you would like plans for a Super-J pole (which is similar to a Slim
Jim
except that instead of being folded over, the top part sticks straight

up),
I would be happy to email a .bmp file. Just respond to my email
address
with a message. I built one for 2 meter ham but ended up using it
with my
scanner because of the gain it has. It is, in my opinion, one heck of
a
performer of an antenna.

Probably pretty low unless for some reason they got a complaint
against the station. The FCC normally doesn't take action against
pirates due to
probability that there's no money in it. Normally they go after big
corporate offenders with deep pockets.

I was a professional radio operator in the USAF for four years. I've
been
an SWL for 10 years specializing in utility stations which primarily
use
USB. I think this qualifies me to be competent with SSB receiving
techniques. My radios may be considered to be my "toys" by my wife,
but I
wouldn't say that an Icom R71A or Kenwood TS140 ham transceiver are
"toy
radios."

> > who listens to shortwave that IS NOT a swl hobbyists / masochist aka some

Your attitude toward radio hobbyists is telling. Yes, I have a life.
That's why I listen to shortwave, to relax and get away from life for
a
while.

> our
> hard
> > signal can be corrected by a separate satellite feed with no
> > processing...raw audio from the distribution amps

Then do it! Don't blame your lousy signal on the listeners. This
morning I
listened to KIPM, a pirate station running 1/nth the power you're
using, yet
he comes in s9+20 with a totally clear signal. In fact, most pirates
have a
better signal than yours.

<<

Man, ain't that the God's honest truth.I see more young gals on the
phone while driving and it's quite scary.
We have this one in the neighborhood that drives her dad's SUV at a rate
of
about 45-50 mph on a residential street that is posted at 25 mph, 15 in
other places, and she's always on the damn cell. We have 3 cops living
in the 3 block area and if I had little ones out playing (as many here
do) I would be the loudest, most vocal parent in the 'hood and (shudder)
I may even have broke out the ld video camera.

>I was actually put onto the sidewalk by a lady in a van on a cell. I

I was sorry (sarcastic tone)". I was so mad that I was afraid I might
get into trouble by arguing with her, so I drove away. <<

HEEHEEE! I'm not laughing at you Jerry, I'm laughing 'cause I know exactly what you feel.
When I have the dog in the car, traffic violators that jag me off are usually pretty cool about it. Without the dog, it's amazing how many feel they have to pass you when you're pulling a boat or trailer...NO MATTER HOW FAST YOU'RE GOING! Never could figure that out. Cruise control on, happily listening to channel 19 on the cb, and some yahoo has to not only cruise next to me for 5 or 10 minutes, all the while falling back and forth, back and forth, but finally decides to pass me and get in front of me and.....SLOW DOWN! OFF goes my cruise control, I pull out in the hammer lane to pass them, and they floor it. I hear ya' brother,I hear ya'! Seen a bumper sticker..said "Hang up and drive." Amen.

>Cellphones and driving don't mix. Don't know why
they don't, and I don't know why talking on a radio doesn't take away one's attention as badly, but
it just does.
73
Jerry<<

I've wondered that myself and even discussed it before. Just a thought, and it may be unrelated, but whattya wanna bet that many of them that have a hard time driving and talking on a cell couldn't drive a stick if their life depended on it?
I mean, how many of us learned to not only drive on a stick shift, but could actually eat a burger and have a drink at the same time, maybe even a smoke, and hold the prom date's hand at the same time while popping the clutch and shifting gears and keep driving with no problems? What the hell happened?

They already did it in some places...Ohio for one...they even have billboards there that say "Pull over...cell call zone lane" or something like that. Betcha we see it outlawed more and more.

Hello fellow hobbyists and Companies that give Alpine stereo gear away for nothing!!!!!

You gotta love a company that gives stuff away. Someone might like to suggest to Peter at Newcastle Pro Sound, that when a company advertises Alpine items for $0 AUD inc. GST, that it might not be a good idea for making money.

Sorry, I looked at both the web pages that you mentioned below. Have Uniden improved their receive problems with this little radio?

Cheers
Dick

jerry heres an honest question for you. since the biggest problem of ham band intruders are really the south americans running LSB on the 12 meter band why is it you are not concerned with these people as well? surely you are writing letters to the south american embassies we have here arent you? i mean if every trucker in the entire world stopped using radios with ten meters it would still only be a small percentage of the intruders off the air.

George,thats why he should buy a nice ham radio and convert it for full band.You could also buy a nice old FT 101ZD with the am board and filter and have a real nice cb radio with 2x 6146 finals.The early 101 series even has a 11meter mode!Go old days!

It was founded by them but things were oh so different back then they had no Laws to follow they made them up as they went along. They formed a government, and since you weren't born in the 1700's you have to follow the laws that the Government founded by these free thinkers created. Do you think they would have wanted a lawless society one where rules are made up on the fly, one where people obeyed what laws they wanted and shunned the others they didn't like?
The government doesn't think for you, they just tell you what you can or cannot do. If you don't like it Afghanistan is only a few hour plane ride away

My question is why we would assume the carriers are on the same frequency to begin with? Most likely, one will be a KHz off or so; then it's a 50/50 crapshot if the two sidebands will overlap a KHz or two or not.

Tom<<

He was driven underground. The cartoon voob character emerged when his real identity was discredited beyond repair.

>And that identity is? Inquiring minds need to know! (just for future reference, you understand) <<

I really don't concern myself with "who"., that's how these guys achieve sticky palms.
There are several on here who have traced and pinged him down to the second he posts.
Maybe you'll get an email from the one who did the legwork, it's quite impressive and leaves no doubt. I can give you two known facts...more than one has posted as "Aaron" here in the past (Frank was replying to his own posts on google prior to them even showing up) and only one other person has lost as MANY emails and access to the group for violating rules as Aaron...KC8LDO. Look him up, he attributes his popularity to cbers bootlegging him..... Hell, if cbers were gonna bootleg a call, we'd use a movie star or Riley's or someone worthy.
One can always tell when the google account is shared..Lelnad can't mask his personal anger as well as Frank. Frank CAN be pleasant if the mood so strikes him, so can George, but George isn't full of malice (it's vinegar) and says what he wants out in the open.
Aaron is a nocode.

Once again, you're mixing apples and oranges. These radios are illegal for use ON CB. They are not, and cannot be, illegal for use on 10 meters since there is no Type Acceptance required for that use. They never have been legal for use transmitting on CB frequencies (not that it ever stopped anyone).

And a licensed amateur can certainly still sell one to another licensed amateur. Something that Aanal Aaron (and apparently Jerry Ox) just cannot grasp.

Not even going to bother quoting this idiot. You need to run 75 ohm coax in dual antenna situation rather than 52. The place where oyu might want to use 52 ohm IS when you are using DIFFERENT types of antennas on a vehicle! You have it all backwards. All the splitter is going to do is screw you up even more.

Because one has to start somewhere, and it is easier to work within the laws
of one's own
country. The problem of domestic truckers on the ham bands is greater than
you think--and
that is understandable from your point of view. It is no flame, but from
the point of view of
a "freebander", this view is one that parallels one's view of freebanding
itself. The domestic
truckers ARE operating on 28.085, unscrupulous vendors are selling the crap
that facilitates it,
many hams are doing what we can to stop it, and we WILL stop it. I can go
out onto the local
interstate and hear "Tan-fer thar, Drivah, I h'yeered that, ah did,
SQUEAK!!" After the domestic
intruders are convinced that their operations are more costly than they are
willing to pay, THEN
the government can deal with the foreign interference thru diplomatic
channels. Meantime, I can
listen, discreetly photograph, record and send in reports of what I hear. I
can visit truck stops
and travel centers and "browse" the CB cases to see if I see any of the
non-certified radios, and
I can email RH with the info. I can write my Congresspersons,
Telecommunications Committee
members, and whoever else I can think of asking for help. I can "park" on
28.085 and call CQ
CQ CQ DE K4*** on CW right over the top of the SOBs. I am tempted to
install my 600 watt
AMP and start using it on 10M CW right on top of 'em! And you know what? It
ain't interference,

because intruders have NO protection from transmissions made by the rightful users. I *could*
borrow a certain transmitter that weights 5000 lbs and does 10 KW and key down on top of them
using the same mentality and tactics of *some* of the "sooper bowl" guys. NAH, that ain't legal, so
I won't stoop that low. But I sure will send high speed code everytime I hear their stupid sh**.

Each problem in due time.

Neither is the case, so the only solution is to ban cell phones while
driving.

>Now HERE's something we can agree on! Neither CB or ham operators have
caused as much
havoc and mayhem on the streets as that caused by Mary Q. Public while
driving AND in Lala land
on their cell. I often remark that there are so many people are using
cellphones that young girls now
believe that they have to have a cellphone to their ear before their car
will start; that's the first thing
they do when they get in--cellphone to ear, key in switch, put in gear,
then drive off.
<<

Man, ain't that the God's honest truth.I see more young gals on the
phone while driving and it's quite scary.
We have this one in the neighborhood that drives her dad's SUV at a rate
of
about 45-50 mph on a residential street that is posted at 25 mph, 15 in
other places, and she's always on the damn cell. We have 3 cops living
in the 3 block area and if I had little ones out playing (as many here
do) I would be the loudest, most vocal parent in the 'hood and (shudder)
I may even have broke out the ld video camera.

>I was actually put onto the sidewalk by a lady in a van on a cell. I
was in the curb lane at 35 MPH,
she was in the CENTER lane just a half car length ahead of me. Because
she was so out in space
on her phone, she suddenly realized that she had missed her turn into a
shopping center and cut across in front of me and into the shopping
center! SCREEEEEEEEEECH! I swerved to keep from T-boning her and her
little kids, and found my self traveling down the sidewalk narrowly
missing a concrete light pole base (by mere inches), and sliding to a
stop. I then drove down to the
next driveway and followed the lady into the center who never offered to
stop when she ran me out
of the road. I rolled down my window, "Lady, did you even SEE what you
just did?" "Waaaal, I did after I turned" "Yeah, and you could've
severely injured your kids, me, and my 88 year old Dad"! " Well, I SAID

I was sorry (sarcastic tone)". I was so mad that I was afraid I might get into trouble by arguing with her, so I drove away. <<

HEEHEEE! I'm not laughing at you Jerry, I'm laughing 'cause I know exactly what you feel.
When I have the dog in the car, traffic violators that jag me off are usually pretty cool about it. Without the dog, it's amazing how many feel they have to pass you when you're pulling a boat or trailer...NO MATTER HOW FAST YOU'RE GOING! Never could figure that out. Cruise control on, happily listening to channel 19 on the cb, and some yahoo has to not only cruise next to me for 5 or 10 minutes, all the while falling back and forth, back and forth, but finally decides to pass me and get in front of me and.....SLOW DOWN! OFF goes my cruise control, I pull out in the hammer lane to pass them, and they floor it. I hear ya' brother,I hear ya'! Seen a bumper sticker..said "Hang up and drive." Amen.

>Cellphones and driving don't mix. Don't know why
they don't, and I don't know why talking on a radio doesn't take away
one's attention as badly, but
it just does.
73
Jerry<<

I've wondered that myself and even discussed it before. Just a thought, and it may be unrelated, but whattya wanna bet that many of them that have a hard time driving and talking on a cell couldn't drive a stick if their life depended on it?
I mean, how many of us learned to not only drive on a stick shift, but could actually eat a burger and have a drink at the same time, maybe even a smoke, and hold the prom date's hand at the same time while popping the clutch and shifting gears and keep driving with no problems? What the hell happened?

.....and deal with one or more radio mikes in the process! I wonder what the
Valley Girls would do if they didn't have air conditioning, no cell phones, party line
telephones, or walked to school (I did in elementary school)? AND our car was
a 3-on-the-tree. I drove a pickup truck recently with a 5 speed, and my 15 y/o
daughter LAUGHED because she thought it was "quaint" and that Pop looked funny
shifting gears! Seemed normal to me! ???????????????? Hehe!

> 75 ohm is for tv.

Actually, for twin antennas you should use RG62 from the "T" connector
to each antenna. RG62 is 93 ohms which, when paralleled for twin
antennas, will be real close to the nominal 50-ohm impedance at the
back of the radio.

> My other consideration was to pop a hole out the back side of the sleeper in

Probably a better idea then running the co-ax down the steering
column.

> Working with dual antenna systems is no problem for me. I just cut both
> cables at the same point at the same time.
> Fit the plugs and go.

And use coax-seal on anything outside in the weather.

Bud, I was stating EXACTLY the way it is, the laws of the US DO control
radio spectrum
(Title 47), we do NOT have a right to use a radio, and if the "freedom' you
so proudly proclaim
extended to radio, then NOBODY would be able to use it. That was already
proven before we
were born. What about those OTHER "free thinking" people who would like to
use a radio, too--
such as aircraft, police, fire, ambulance, military, and so on? Hmmmm? If
YOU had your way, radio would be as useless as tits on a boar hog!!! AND,
the rules ARE set up in a MUCH freer
way than many other countries, and we do (luckily) have a great deal of
freedom in that respect.
But then *some* people only know "Tarn that' ere reddio all th' way tuh th'
r'aht, turn all them knobs over as fer as they'll go, put 'far' in th' war'
thar, pedal to th' metal, treetop tall thar, git
back 'ere"---their knowledge is reflected by their syntax! IF you actually
got what you would want,
you'd wish it were back the way it was.

I have not dealt with that particular issue because I honestly don't know.
I won't be using one,
so it doesn't matter. What IS apparent is that they are illegal to IMPORT
and MARKET.

Amateur's dispensation from type acceptance is not being disputed by
me, and never has been. The phoney "10 meter radios" being sold to
non-hams at venues such as truck stops (e.g. the soon-to-be busted
"Flying J") is what is at issue here.

Anyone can see that the distributors and manufacturers of phoney "10
meter radios" (and CB amplifiers) use amateur equipment's lack of type
acceptance as a "loophole" to get their crap to market. For example,
this is not legitimate "amateur gear" by any stretch of the
imagination:

http://hotspotcb.com/cbshop/pop/connex33HPc.html

Luckily the FCC recognizes that calling poorly-disguised CB radios
"amateur gear" is an obvious (and dishonest) ploy to facilitate sales
to truckers and "freebanders".

HV PLATE TRANSFORMER
It is 3000v @ 4 amps 120/220 primaries. It is a heavy rascal though
about 100lbs. I have been trying to sell it have it listed been asking
300.00 for it OBO
time you filtered and rectified should do over 3500v 14" tall x 11 3/4"
wide x 7 1/2" deep
I know it can be shipped probably around 60.00 or so
I just had a transformer sent to me from texas it weighed 110lbs and
shipping was 65.00

Several nice Big Air variables Not really sure about the actual cap of
them but they are big and beefy.

Oil Caps

1-10mf@1500vdc
1- 2mf@5000vdc
4-1mf@2000vdc
2-1mf@3600vdc
2-1mf@600vdc
4- 250mf@450vdc screw in caps computer grade

I have a mobile amp Pride 100 Bi Linear amplifier says 10-80 meters on
the front
has ssb/am preamp

Also Have a 10 METER 2 pill driver amp About 60-75 watts out with a 10
amp 13.8 vdc power supply built in so you could run a mobile in the
house on it.

Collins 300G plate Transformer

part # 672-1360-00
Pr) 0-105-110-115-120-125 vac 60 hz 1 ph
S1)1200 vct @ 0.283 ccs
DM) Ht= 7.000 Wt = 7.500 Dt = 6.500
weight aprox 45 lbs

All of the above items are for trade or sale. Looking for Pieces for a homebrew amp i am
working on GU-84B
Thanks Chris

Yep, it's a matching section. You use odd quarter wavelengths of coax of a different impedance to transform one impedance to another. Believe it or not, if you feed your radio into an open piece of coax 1/4 electrical wavelength long, your radio will see close to ZERO ohms. On open coax. Two 50 ohm loads (those antennas) in parallel will give you 25 ohms. You want to change that to 50 ohms. That will call for coax of a different charateristic impedance. BTW coax is made in different impedances and much of the 75 ohm stuff is much heavier than what you see used for cable television. 30 years in CB? Why do I believe you?

Hi Jerry, how's things going?
The answer to your question is simple, nothing to do
with radio, except that certain people have brought it
upon themselves to determine what can be said and
what not in this forum. Their have been some that say
you can't even discuss linears, export radios, keydowns
etc etc. That is the purpose of the sig file, not what you can
use and what not.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

Freedom of speech, of the press, of association, of assembly and petition -
this set of guarantees, protected by the First Amendment, comprises what we
refer to as freedom of expression. The Supreme Court has written that this
freedom is "the matrix, the indispensable condition of nearly every
other form of freedom." Without it, other fundamental rights,
like the right to vote, would wither and die

I can't believe that this one is still going. I can remember buying a 3 element CB beam for $25.00 new. $35.00 for a 1/2 wave. They were a great place for mating and guy-wires but no more up here. They also were a great place for cheep antennas and mounts but no more. Also good entry level scanners and most of us wouldn't have gotten into CB if it wasn't for them, first CB Hand Held and so on but again no more. I do agree that they went more American, greedy and if it is junk and you can make a big profit then sell it. Isn't that the American way? I never did like R/S but they were a good place to go in a rush. I can remember one time we were putting up a 40 foot pop-up mast and we had a wind gust that broke it in the middle before we could get it guyed. I drove up to the local R/S store and picked up a new one in minutes while I still had the help to put it up. Now I would have to order one in and pay over $100.00 instead of under $40.00. They were convenient but no more.

I have 4 of the 4-250A tubes with Johnson ceramic sockets in excellent shape.
would like to either sell them or trade them for some thing i could use.
Here are some of the things i am looking for a H/B GU-84B amp
Such as a 6 pos heavy duty band switch at least 5kw rated
A 400 volt or a little above is fine, transformer say 3-6 amps would work
a 0 centered min. 140 volt dc meter - + higher dc voltage is fine.
Need 2 air variables around 850 and the other around 1250 rated at least 5k
Gonna have to come up with some stuff for the tank circuit looking for something heavy duty for it.
I have all sorts of stuff laying around to trade on if your looking for something specfic i will look.

Then you should understand that there is no such thing as an "illegal"
amateur radio transceiver.

> The phoney "10 meter
> radios" being sold to non-hams at venues such as truck stops (e.g. the
> soon-to-be busted "Flying J") are the issue.

There's nothing "phoney (sic)" about them. They operate on 10 meters,
so are 10 meter radios. They come from the factory with only 28.000 -
29.700 MHZ coverage. It's only after they are modified to operate
outside this area that the CBer's will use them. They don't come from
the factory this way. True, it isn't hard to modify most of them,
which is why the FCC put out the notice that they should not be
marketed or imported. But when you get right down to it, they are
still 10 meter amateur radio transceivers. If I modified a Cobra 148
to operate on 10 meters, does that make it a "phony CB?"

> Any reasonably perceptive
> person can see that the distributors and manufacturers of phoney 10
> meter radios (and CB amplifiers) are using amateur equipment's freedom
> from type acceptance as a loophole to get it on the market.

That's your assumption, which may not be entirely false.

> Luckily
> the FCC recognizes that merely renaming poorly-disguised CB radios
> "amateur gear" is an obvious (and dishonest) ploy to exploit booming
> sales to truckers and "freebanders".

It's only the truck stops & CB shops that are doing the selling of
modified 10 meter radios. They are not "poorly-disguised CB radios."
They are manufactured and marketed as either amateur radio
transceivers or "export" CB's, meaning they are designed for use
outside the US where the CB rules are different. They are, however,
still CB radios. They're just not legal for use here.

> Oddly, I have noticed that there
> are certain hams posting in CB newsgroups who would prefer that sales
> of this equipment to unlicensed individuals continue unmolested.

I don't want intruders on the 10 meter band, but I also don't want restrictions placed upon the types of radio equipment I can purchase and operate in a legal manner. If I want to buy a modified 10 meter radio to use on 10 meters, I should have that right. I have a license and can operate on 10 meters. This still is America, and we still do have a few freedoms left. I believe it's up to the individual to operate the radio equipment in a legal manner, not up the the government to ban the radios outright.

How long before they go after amateur radio HF transceivers because they can be modified to operate outside the ham bands?

Tom

I don't care what you believe about me. That's your problem.
KCS3191 was my CB callsign way back when.
The way we used to do it back then was, use the regular cb cable for two
antennas, then trim the antennas as needed.
I never had anything over a 1.25:1 match on any of my radios.

I suspect that when cb and ham mobile ops are using the radio that they are chatting with buddies and enjoying the conversation. The cell phone user, who many have trouble walking and chewing gum at the same time, are on the phone shouting at their lawyer, spouse, boss, ex-wife/husband/boy/girlfriend/lover ect., ect., ect. getting their blood pressure and frustration level over the top, thus paying little attention to what they should be doing and that is controlling the vehicle. I am reminded of what my flight instructor said about the aircraft radio, "your first priority is to fly the plane, so forget the radio if you have to".

4012. Help - Low Transmit

Newsgroup: rec.radio.cb

Source record: 132940

I am trying to work out what is happening with my DX2517. The radio has recently been dropping wattage soon after first use. ie. Starts around 5W (half throttle) and then drops off to just under 2W (full throttle) and doesn't return. I pulled the card thingy across the TX check points and measure 4.9V on TP7 (far right)[Schematic or PCB labelled incorrectly as TP9. Same side as collector of 2SB754 - 4.9V . I put an ammeter between this TP and the middle one (Driver) and didn't measure any current at all on AM TX. I flipped the radio, unsoldered the 2SC2166 and both the 2SC2312 finals and checked them on my meter. All three tested good. I am open to any suggestions.

Weak Station.

Hay weak what is going on is that the volts in the TX mode is fading when
you check the current on the driver and finals you have to key the mike ,
put the little board back in key the mike read the voltage there when cold
then when it warms up then you will have an idea whets going on.

LOL. I don't think even you can tell me (with a straight face) that
this is "a ham radio":

http://hotspotcb.com/cbshop/pop/connex33HPc.html

It's an illegal CB that's being called a "10 meter radio" in order to
be sold to truckers. Hence, a "phoney 10 meter radio".

>
>> Any reasonably perceptive

>> person can see that the distributors and manufacturers of phoney 10
>> meter radios (and CB amplifiers) are using amateur equipment's

>
>That's your assumption, which may not be entirely false.

http://server42.hypermart.net/pinklightning/

Don't take my word for it, do a search of the phrase "10 meter radios"
on the web. Dozens and dozens of shops like "Pink Lightning BigRig
Truck Chrome and Accessories" offer phoney 10 meter radios to
truckers. They only call them "10 meter radios" as a sleazy loophole
to sidestep the law. In other words, they have hijacked the name
"amateur radio" in order to produce and market a CB that transmits out
of band in addition to the legal 40.

>> Luckily
>> the FCC recognizes that merely renaming poorly-disguised CB radios

These radios go well above 28 mHz, often to 29 and beyond. What
country outside the US allows unlicensed CB-type operation above 28
mHz?

>They are, however,
>still CB radios. They're just not legal for use here.

As stated above they're not legal for unlicensed use anywhere. Unless
there is a country that allows unlicensed CB-type operation above 28
mHz.

It has nothing to do with American freedoms or individual rights. The RF spectrum is an international resource shared by all and must have rules just as public roads must have rules. The sale of RF linear amps to licensed amateurs have already been restricted -- due to abuse by outlaw CBers. If the casual attitude toward piracy of amateur bands by CBers continues (fueled by unscrupulous manufacturers and distributors) then there is no reason to think that 10 meter amateur equipment would not face similar restrictions to those placed on RF amplifiers. I certainly would not like to see the sale of legitimate amateur gear restricted. But due to abuse by outlaws who "don't care about laws", it may come to that. And again, licensed amateurs will have the outlaw CBers to thank for such restrictions.

>How long before they go after amateur radio HF transceivers because
>they can be modified to operate outside the ham bands?
>
>Tom

If you cheerfully allow companies to hijack the name of "amateur radio" in order to pump so-called "export" and "10 meter" radios into the booming outlaw CB market -- it won't be very long at all.

Hello,
I'm new to this group, and I'm sure my question has been answered a thousand times. If so, I apologize in advance, but here goes. I recently installed my Uniden CB in my Jeep. I have a 4 ft. fiberglass (pretuned) whip antenna which is mounted directly to my bumper with a 'stud mount.' I then installed 18 ft. of antenna cable (100% shielded) along the frame under the jeep and through the firewall to the radio. Power comes from the fuse box. When I use the radio's SWR meter, my reading is very far in the red area, a four I believe. I'm just wondering what my problem may be and what I can do to reduce the SWR.

Thanks for any help you can give,
Kevin

John,
You may never had had an SWR over 1.25:1, but the problem
is that the antenna system was reactive, meaning that is wasn't
a 'resistive' load as it should be. Power is only developed in
a resistance, never in a reactance. That means that if your
antenna system is reactive it isn't producing the power that a
purely resistive antenna will. If it can't produce the power,
it certainly can't radiate it. That doesn't mean that a reactive
antenna system won't work, it does mean that it won't work as
well as a resistive antenna system will. It's very easy to 'fool'
an SWR meter, a good example of that is the 'magic' lengths of
feed lines. That's basically what was happening with the way
you 'used' to do it. Sure, it worked, but it didn't work as well
as it could have. This is all just simple physics, like it or
not.
'Doc

Jim, this might actually work if the antennas were not 50 ohms. Fifty ohm
cable will transform a 25 ohm load to 100 as well. Yes, I believe too.

Kevin,

The antenna has to be mounted away from metal objects. The
antenna you mentioned is designed to mount on a mirror. If it is on
your bumper then it is possibly next to the metal body. Some peple
mount them on the rear spare tire mount.

Can't you understand a simple fact? There is nothing "phoney" about a
ten meter radio. It is meant for use on 10 meters by licensed
amateurs. The fact that SOME people abuse that fact should not keep me
or any other licensed ham from obtaining and using one if we wish to,
even if we buy it at a truck-stop!

> Anyone can see that the distributors and manufacturers of phoney "10
> meter radios" (and CB amplifiers) use amateur equipment's lack of type

> this is not legitimate "amateur gear" by any stretch of the
> imagination:
>
> http://hotspotcb.com/cbshop/pop/connex33HPc.html

Nice picture. Looks like a CB to me. And since it's being sold by a CB
shop I would expect it is. I also note that there is nothing
indicating that 10 meter frequencies are covered by the radio. That is
called an "export radio"; NOT a "phoney" 10 meter rig. There is a huge
difference. "Export radios" have never been legal for use on CB

frequencies. So you're going around the same circle again.

> Luckily the FCC recognizes that calling poorly-disguised CB radios
> "amateur gear" is an obvious (and dishonest) ploy to facilitate sales
> to truckers and "freebanders".
>
> -Aaron-

However, you're doing the amateur radio community a tremendous disservice by limiting the choice of radios they have to operate on ten and twelve meters. As others have pointed out, it's not the radio IT'S THE OPERATOR (!!!) that violates the law. What you should be working on is a way to eliminate bad Operators.

Didn't NZ change their CB band to the standard 40 a few (maybe ten)
years back?

They used to be one megahertz lower and couldn't use beam antennas,
but I seem to recall all that got changed.

Anybody?

They don't? Galaxy's so called 10 meter radios dx33hml has 6 bands and 240
channels out of the box, DX44 8 bands 360 channels out of the box, DX 66v
360 channels 8 bands , DX73V 360 channels 8 bands echo reverb, robot voice
changer, etc etc Connex same story. Why arent any of these so called Ham
radios advertised in QST or 73 magazine or even qrz's website if they are
geared towards hams?

> But when you get right down to it, they are
> still 10 meter amateur radio transceivers.

No that is what they are being called by the likes of you Ham trancievers
don't have roger beeps echo boards and robot voice changers. They may
operate on 10 meters but they are in no way amateur radios.

> If I modified a Cobra 148
> to operate on 10 meters, does that make it a "phony CB?"

No it makes it a illegal CB

Roger Beeps, Echo and Robot Voice changer and all? Funny If these radio were meant for licensed amateurs why arent they advertised in Ham publications and Ham web sites? You will only find them on the seedy Illegal CB Web pages calling them something they are not Ham radios. Lot of them are AM/FM only radios what happened to SSB. If they are true Amateur transcievers you would think you might see a CW mode as well.

Looks like a Cb to you? What CB uses 6 band switches to go from Channel 1-40? How about the Connex 4400 says it has 360 channels I thought CB's only had 40? What do you do with the other 320?

Lets take a good look at some of the Ads for these Radios. Calling them ham radios when they dont even operate the full 10 meter band. Oh btw there is your Connex with the Confederate flag it is listed as a 10 meter radio

4036. The history of 10-meter converted to CB radios

The Power Wars Continue
By Stan Wells

The history of 10-meter converted to CB radios

Back in 1975 the Federal Communications Commission (FCC) decided to add more channels to the Citizens Band (CB) frequencies. It went from 23 to 40 channels. The FCC also lowered the power limit in these frequencies from 5 watts to 3.5 watts. Shortly thereafter, the power wars began. It was soon discovered that the 10-meter Amateur radio was virtually unregulated. This gave rise to the Connex and Galaxy revolution. These radios were easy to convert to 11-meters which is the CB band. Additionally, they had 25 watts of power. They eventually captured nearly half of the sales in the CB marketplace with the addition of many other brand names to the field--some now offering as much as 250 watts of power.

The current top seller is the General Lee. This radio is a copy of the Connex 3300 HP with the dual finals. This allows the radio to run both finals at the same time, giving nearly double the power output of the single final radio.

At a Peak Envelope Performance (PEP) of nearly 50 watts, the General Lee sports a prominent Rebel Flag on the front panel. This radio prompted a new round of power wars. Enter a company with a long and respected history. RF Limited, located in Issaquah, Washington, is long known for quality microphones and innovative ideas. They began importing magnum radios, Delta Force and Alpha Force as well as Millennium radios. The Delta Forces being the most powerful at a PEP of over 50 watts.

Unfortunately, the quality was less than adequate. They were plagued with problems from cold solder joints on the board to surface mount parts so small that most CB shop couldn't fix them. Since plagued with many problems they have dropped the whole line of magnum radios. Now RF Limited is about to release the replacement for these radios under the Maverick nameplate, to be designated A24.

The Maverick A24 will be a dual final Connex-type radio with a twist. The dual finals are linear, or more simply, one final feeds the other. More power out and cleaner signal on transmit. The board construction on this new radio seems to be far better than the Magnums. It loads a standard 4-pin Uniden/Cobra wired microphone on the front panel. The echo board on these units can be modified as well. By changing one resistor, it moves from mildly annoying echo to turbo echo that repeats a word almost endlessly. It also uses a standard CB power cord for ease of replacement if necessary, which you may choose to do as the power cord provided is a bit small for the amount of current that this radio draws. An upgraded cord is highly

recommended. The best for the job is the CB3AXX from Workman Electronic Products, Inc.

Your Road King RK56 or Astatic 636L noise-canceling microphone will work very well on this radio and keep that "big" radio sound. The conversion to CB channels is extremely simple. Anyone with limited knowledge can do it. We still recommend you take it to a competent technician to have this performed. Our only complaint was that the controls on the faceplate are still of low quality. If the band switch and other variables were upgraded, this would be a formidable contender for the position now held by the General Lee. Should a truck driver buy this radio? You should recognize that all of these radios are illegal in the CB frequencies. If you are willing to try a new product, this will definitely make you one of the louder voices on the radio.

Lastly, I would be remiss if I didn't tell you this. To be in possession of a modified radio is a federal felony. At present the FCC does not appear to be enforcing these rules and regulations. But I just received an order for a Cobra radio from a customer in Alabama who had his Galaxy confiscated at a DOT stop. As always, I recommend you buy a real CB radio like a Cobra, Uniden, Midland or Cherokee.

Enjoy your equipment and stay safe.
Robinhood

>When I use the radio's SWR meter, my >reading is very far in the red.
Internal SWR meters are known for inaccurate readings. Get a cheap ($10-15) SWR meter from Radio Shack (sorry but everybody knows where they are!). You will need a short jumper to use it so make one or buy one. Now check it. Also, many whips require a small spring. This adds length to the actual antenna and effects SWR. Close proximity to the vehicle (on the bumper) commonly raises SWR as signals reflect right back at the antenna. Lastly, 18ft of coax is BS. The important thing is that the coax have an ohm reading of as close to 52 ohms as possible. That is the coax only, no antenna connected, no radio connected, just the coax. Without buying an expensive antenna analyzer go with this. If your coax says RG-58 or RG-8X try about 14.5 ft. Good luck

Kevin,
You can't 'pre-tune' an antenna for all installations.
An antenna has to be tuned each time it's installed. I'd
suggest that doing so will cure your SWR problem.

Source record: 133069

with swr reading that high, id say it is not properly installed, or connections not soldered...as far as tunning your antenna, i seriosly doubt you can get close to 1.5 with the reading you are now having...swrs need to be around 2 before you can "tune" that antenna, and tune on channel 1 and 40, if swr higher on 1, increase tip lenght, if its higher on 40 than channel 1, shorten the length. channel 19 should be the closses to zero you can get...if on your bumper is the only place to mount, use a 104" steel whip...good luck

What!! Give me a break, do you think if these radios were not
available that the hams would not radios to use on 10 meters?
There are plenty of choices of radios meant for ham use by the
well known makers for hams to choose from.

Richard refuses to see the truth. None of these radios are meant
for the ham market, they are marketed to the cb crowd to use so
they have all these extra channels which include the 10 meter ham
band. The hams care nothing for these radios, they have plenty of
legitimate ham rigs by the well know manufactures of amateur radio
equipment to choose from.

From Amateur Radio Newsline Report 1305 August 16th, 2002

ENFORCEMENT: DONT ADVERTISE BANNED GEAR ON THE WWW

The CQ website reports some unofficial advice from the FCC: If you're going to sell non FCC approved amateur and CB equipment, don't advertise it on the World Wide Web!

Case in point. A company in Wisconsin we have reported on before. Roper Electronics which was asked by the Commission back on June 18th to explain why it was alleged web advertising non-certified CB transceivers and HF linear amplifiers on its website. The company was also ordered to submit a list of all High Frequency transceivers and amplifiers sold within the US or offered for sale during 2002, along with the FCC certification number for each model.

The FCC's Riley Hollingsworth says that his office has received a answer to the inquiry from Randi Owen. Owen is the owner of Roper Electronics. Hollingsworth says that his office and the local FCC field office is reviewing Owen's reply. (CQ)

For starters use a SWR Meter to check your swr. If you don't need 18' use a
different length of coax from antenna to radio. Make sure mount is grounded
to body.

The FCC has already restricted the sales of external RF linear amplifiers, thanks to abuse by outlaw CB operators. They've also restricted sales of phony 10 meter radios. Even though the outlaw operator is the abuser, the equipment is what gets restricted. Keep abusing, keep creating more restrictions.

You're exactly correct. Communication between stations operated in this way must assume an on frequency condition amongst all "channel" users. Only in this way can interference be minimized and the whole concept viable.

Should large scale operation of this type be contemplated I think a pilot carrier such as used in ACSB would suffice as means to ensure continued on frequency operation. The pilot carriers' frequency would be far enough removed from the information passband(voice) that it won't be heard and this allows the receivers and transmitters to "lock" to each other. Of course this goes back to the initial problem of keeping a good reference timebase in the radio.

Timebase references are relatively inexpensive anymore and even the cheap ones will provide suitable accuracy.

Another area of concern would be those persons who defeat the "lock" circuits in favor of a manually tuneable transmit/receive capability..ie..unlocked clarifier, vfo etc. This will, in many cases, prove counterproductive to the whole concept and any gains in interference reduction will be negated.

It's a given that many stations will find need to overide the "locking" capability for one reason or another so the whole point is moot.

But..It can be done..... with everyones co-operation.

Humans have just so much concentration and multi-tasking skills available.
Some more than others.

I suspect it's the fact that first and second generation phones had to be
held to the ear by hand and couldn't be removed lest we miss out on the
conversation. Our concentration was then split between only one hand
available to drive, shift, rifle thru folders, drink coffee and holding the
phone.

Because we are only using a mic and the receiver can be heard from a mounted
spkr elsewhere, our both hands are still available to steer, shift, rifle
thru folders etc without loosing the conversation or using up valuable
concentration in holding something up to our ears.

While this type of multi-tasking can easily be learned, it's evident by
today's news that most folks either aren't up to the task or won't bother
becoming proficient in this regard. I evidence so many drivers, women in
particular, that cut you off without realizing it nor having any concept of
the impending doom that 80,000lbs of truck can bestow upon the unwitted.

This style of mindless driving seems to be the norm for this generation of " I have to be in front no matter what" drivers. These are usually the same people you will see in court saying things like " I didn't cause the accident because according to the drivers log book he should have been there and gone 15 minutes ago. It had nothing to do with the fact that I was too busy looking for that next open hole in the next lane that I could abruptly and without warning jump into that I wasn't able/willing to pay as much attention to my surroundings on the road as I was in "diss'n" someone on the phone.

Have you ever heard the mindless babblings of young adults on a phone in general? Makes me wonder why they even learned to speak in the first place.

Thank engineers that they've finally incorporated inexpensive means to provide hands free operation although this is not a panacea. These people probably wont use it because it still limits their ability to jump and run while maintaining a call. Oh heaven forbid I might loose this important call for a few seconds while I grab my phone from the power cradle. I can't be held up even for a second when I arrive at my house/ convenience store job etc.

Ok I'm done..I feel better now.

That's the purpose of the power supply.
Although you should get one that is rated better than your fuse.
Like a 5 amp for a 3 amp fuse.
1 amp should not be used on a cb.

As for the antenna inside the house, well, that's kind of an iffy situation.
You'll be able to hear without any problems, but for talking power, you're
not going to get much due to the fact you have no metal to act as a ground
plane.
All you can do is experiment and see what happens.
Depending on where you live, you might want to look into what's called a
"Trik stik".
It's designed to mount on window sills outside of the house, or apartment
building.
It's a two part anteanna with one part upright as usual, and the other part
pointing down.

I have a nice KDK FM-6033 Six meter rig has tones, Memories 10 i
think It scans -/+ off sets,VFO, call channel.
5/25 watts works perfect looks good. Have mic, power cord and mounting
bracket for it.
175.00+shipping OBO

--
NI4L CUSTOM RESONANT DIPOLE
LEGAL LIMIT ++ CUSTOM MADE CENTER FED DIPOLE
Made with the same components used by our military forces today
Custom made to YOUR FREQUENCY of operation
Let me take the hassle out of making a RESONANT DIPOLE for you.
Click here for more info... http://www.angelfire.com/nb/ni4l/

He did it again, and it failed. The only way for him to SUCCEED,
is not to listen to you. How many SWR's do you have? My system
has an SWR of about 1.3:1 with a resistance of 70 ohms. That is
a seven foot Firestik on the back bumper of a Wrangler. I have
since put another ground on it to improve performance. Works
great. Talks far. An American made antenna on an American made
vehicle for an American.

Scott,
Looks like I opened a can of worms here. Anyway, back to the point of the post. I read your response and am now wondering if I need a longer antenna instead of the 4 ft. firestick I have now. Mine is not tunable, should I have gotten a tuneable one? I haven't found a way to mount the antenna on the spare tire mount yet, but I'll keep trying. What kind of mount did you use on your bumper? How did you add "another ground?" Do you think moving it to the spare tire mount will improve things? All the connections are secure and I don't see a way to improve on the mounting or location of the cable. Any ideas? By the way, what's the most common channel for listening into radio traffic?

Thanks,
Kevin

They could say whatever they wanted to on the box. The actual output is alll
that matters.
If I'm not mistaken, it's 4 watts PEAK power.
